Hi Terry, plans have changed somewhat since I talked to you this morning. On Thursday morning the City of Keokuk and contractors will cut into a ductile iron 24 inch pressurized sewer to tie in a new gravity sanitary sewer in Soap Creek. A new manhole has been constructed over the sewer and a piece will be cut out of the top of the ductile iron. In order to safely make the cut we will shut down ADM plant flow for 2 hours on the upstream end. The flow will be held in their lagoon. Unfortunately we still need to relieve the pressure from the downstream end of the pipe. The only way to relieve this pressure is to divert flow through our CSO 2 for awhile. We will divert domestic sewage through the CSO beginning a 8 AM November 12 for 3 hours or less. We will take stream samples above and below. The Mississippi is currently at a moderate stage of 10 feet. We will notify the water plant at Warsaw, IL. We do not plan to divert flow into Soap Creek. Please advise if there is anything else we need to do. Thanks Chuck Pietscher
