Subject: Submittal of the 2006 Site Monitoring Report, Edgewood, Iowa

Dear Mr. King:

Thank you for the submittal of the Site Monitoring Report for the Former Thermogas Facility located at 204 West Newton Street, Edgewood, Iowa.

As mentioned in the report, concentrations of atrazine, metolachlor, and ammonia nitrogen were found in MW-2A above the MCL and HAL values. In addition, concentrations of ammonia nitrogen and nitrate-nitrite as nitrogen above the HALs of 30 ppm and 10 ppm respectively were found in MW-6. As recommended by Seneca, site closure may be considered following the 2007 monitoring events.

Feel free to contact me if there are any questions, comments, or concerns at 515-281-4420 or Lambert Nnadi at 515-281-4117.

Sincerely,

A handwritten signature in black ink, appearing to read "Tami S. Rice".

Tami S. Rice
