Re: Soil Characterization Services
Proposed Casino Parking Ramp Facility
Highway 20 East
East Dubuque, Illinois
Project No. 07077067

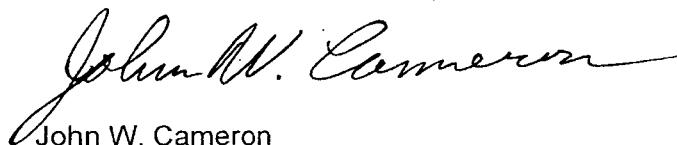

Dear Mr. Brown:

Terracon is pleased to submit our report of soil characterization services completed at the site referenced above. The report presents documentation from recent field activities that included the sampling of soil from known impacted stockpiles.

Terracon appreciates the opportunity to assist you with this project. Should you have any questions or require additional information, please do not hesitate to contact our office.

Sincerely,

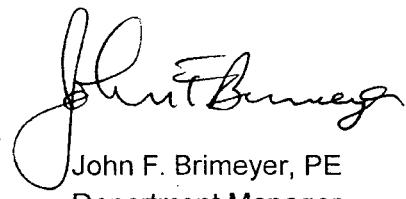

Terracon

**SOIL CHARACTERIZATION SERVICES
PROPOSED CASINO PARKING RAMP FACILITY
HIGHWAY 20 EAST
EAST DUBUQUE, ILLINOIS**

**Project No. 07077067
January 17, 2008**

1.0 INTRODUCTION

Terracon has completed the soil characterization activities at the Highway 20 East, East Dubuque, site as described in our proposal dated December 12, 2007.

1.1 Project History

Terracon understands that a parking ramp for the proposed Diamond Jo Casino is currently under construction at the intersection of East 5th Street and Bell Street, Dubuque, Iowa. Previous site assessment activities identified the presence of uncontrolled fill, consisting of sand, clay, sawdust, and other miscellaneous material across the site. Laboratory analysis of soil samples identified reported concentrations of lead and polynuclear aromatic hydrocarbons (PAHs) in excess of Iowa Department of Natural Resources (IDNR) Statewide Standards. The results of previous assessment activities have been presented^{1,2} to the IDNR and have resulted in the issuance of an IDNR "Comfort Letter" dated October 12, 2006.

The "Comfort Letter" references the Soil Management Plan (SMP) dated August 18, 2006 and prepared by Terracon (Project Number 07037005). The SMP provides an assessment of hazards associated with possible chemical impact, identifies health and safety precautions to reduce the risk of chemical exposure for on-site construction workers, and recommends procedures to handle excess soils in consideration of the observed chemical impact. At the direction of the City of Dubuque (the City), the SMP has been implemented for the site.

Prior to the implementation of the SMP, ~~approximately 22,000 cubic yards~~ of excess materials were removed from the Casino Parking Ramp construction site by Stewart Construction. These soils have been disposed of at a site located on Highway 20 near East Dubuque, Illinois. The site is located within the northwest quarter of section 33, Township 29 North, Range 2 West, Jo Daviess County, Illinois. The location of the site is depicted on the topographic Vicinity Map attached as Figure 1, Appendix A.

¹ Phase II Environmental Site Assessment, East 5th and Bell Street, Dubuque, Iowa, Port of Dubuque Brownfields Redevelopment Project, Terracon Project No. 07037005, June 21, 2005

² Supplemental Phase II Environmental Site Assessment, East Fifthth and Bell Street, Port of Dubuque Brownfields Redevelopment Project, Dubuque, Iowa, Terracon Project No. 07037005, August 18, 2006

1.2 Project Objective

The intent of the characterization activities was to determine whether excess soils placed at the site are impacted at levels above the Illinois [REDACTED] corrective action objectives (TACO) [REDACTED] Soil Remediation Objectives (SROs) and if impacts were observed how soil should be handled.

2.0 CHARACTERIZATION ACTIVITIES

2.1 Health and Safety

Terracon performed field activities under Level D safety precautions. Level D safety attire for this project consisted of a washable work uniform including safety shoes, hardhat, rubber gloves, and appropriate eye protection. Terracon developed a health and safety plan before mobilization.

2.2 Sampling Activities

On December 20, 2007, Terracon mobilized a technician and equipment to the disposal site. Upon arrival, Terracon met with Russell Stewart, Stewart Construction, and discussed site activities. Terracon observed that the site was also being used as a sand pit. The western portion of the sand pit had been filled using soils from the Casino Parking Ramp. The limits of the deposited material were measured and a field site diagram was produced. Terracon divided the disposal area into ten sub-areas of approximately equivalent volume. A rubber tracked excavator was used to excavate test pits within each subarea. One soil sample was taken from each test pit at varying depths. The sample locations are identified on Figure 2, Appendix A. Soil samples were obtained directly from the excavator bucket. Five of the ten test pits were sampled using Method 5035, a sampling procedure for volatile organic compounds (VOCs).

Terracon transferred the soil samples to laboratory-prepared containers that were placed in an ice-packed cooler for transport to the laboratory. Terracon shipped the samples under standard Chain-of-Custody procedures via overnight carrier to Environmental Science Corporation (ESC). ESC analyzed the samples for Resource Conservation and Recovery Act (RCRA) metals by Methods 6010B/7471, pH by Method 9045D, polycyclic aromatic hydrocarbons (PAHs) by Method 8270C, pesticides by Method 8081A, and VOCs by Method 8260B.

The soil disposal area and sample locations were measured with respect to site features using a measuring wheel. Angles were estimated.

3.0 ANALYTICAL RESULTS

RCRA metals were detected in each of the soil samples at concentrations below the Illinois TACO Tier 1 SRO, with the exception of sample TP-2 taken 3 feet below ground surface. Arsenic was detected at a reported concentration of 19 milligrams per kilograms (mg/kg) which is above the background concentration of 11.3 mg/kg, which is also the most restrictive Tier 1 SRO. If the site were enrolled in the ~~Illinois Environmental Protection Agency~~ (IEPA) ~~Site~~ Remediation Program (SRP), TACO procedures allow for the use of concentration averaging. Accordingly, Terracon used ProUCL Version 4.0 to determine the 95% Upper Confidence Level (UCL) for arsenic at the site. This statistical analysis calculated a 95% UCL value of 8.1 mg/kg, which is below the allowable background concentration. The ProUCL data set and calculations are attached as Appendix B.

Excluding acetone, a common laboratory containment, VOCs were detected in only one of the five samples analyzed. Dichlorobenzene, ethylbenzene, 1,2,4-trimethylbenene, and xylenes were detected in sample TP-1 9' at reported concentrations below the most restrictive Tier 1 SRO.

PAH's were detected in eight of the ten samples. The reported concentration of benzo(a)pyrene in four of the eight samples was above the most restrictive Tier 1 SRO of 0.09 mg/kg. The maximum reported concentration of benzo(a)pyrene was 0.30 mg/kg in sample TP-8 6 FT. TACO procedures allow for the use of the Statewide Area Background Approach as an alternative to direct comparison to Tier 1 SROs. The allowable background concentration of benzo(a)pyrene within a non-Metropolitan Statistical Area is 0.98 mg/kg, which is above the maximum reported concentration at the site.

Pesticide compounds were not detected above laboratory limits. Laboratory limits were above the Tier 1 SRO for the following compounds: alpha BHC, gamma BHC, dieldrin, heptachlor, heptachlor epoxide, and toxaphene. Laboratory analytical results for the soil samples are summarized in Table 1, Appendix C. Copies of the laboratory analytical report are attached as Appendix D.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Analytical results indicate that the deposited materials from Casino Parking Ramp ~~do not~~ exceed IEPA ~~Tier 1~~ SROs for arsenic and benzo(a)pyrene. Terracon has conducted a preliminary TACO evaluation of the reported arsenic concentrations using generally accepted averaging procedures and of the reported benzo(a)pyrene concentrations using the Statewide Area Background Approach. ~~Based on our preliminary TACO evaluation, it appears that further action may not be necessary regarding the deposited material. However, site assessment activities completed by Terracon do not constitute a site investigation under the IEPA SRP. Further, evaluation of the site conditions is subject to the review and approval of an IEPA SRP project manager and is valid only if the site were to be enrolled in the SRP.~~

This evaluation is not a recommendation to utilize excess material from the Casino Parking Ramp as fill at this site. This evaluation does not provide an opinion on whether this site is an appropriate landfill under the laws and regulations of the State of Illinois. If a Phase 1 Environmental Site Assessment was completed for this site, an Environmental Professional may regard the deposited material from the Casino Parking Ramp that exceeds IEPA Tier 1 SROs as a Recognized Environmental Condition.

The analysis presented in this report is based upon data obtained from field activities and from other information discussed in this report. This report does not reflect any variations in subsurface stratigraphy which may occur between borings or across the site. Actual subsurface conditions may vary. The extent of such variations may not become evident without additional exploration.

This report is prepared for the exclusive use of our client for the specific application to the project discussed and has been prepared in accordance with generally accepted environmental engineering practices. No warranties, either express or implied are intended or made. In the event any changes in nature or location of subsurface conditions as outlined in this report are observed, the conclusions contained in this report cannot be considered valid unless the changes are reviewed and the conclusions of this report are modified or verified in writing by the environmental engineer.

Bettendorf, IA 52722

ESC Sample # : L325425-05

Date Received : December 22, 2007
Description : Dubuque Casino Soil Sampling
Sample ID : TP-8 6 FT
Collected By : John Cameron
Collection Date : 12/20/07 12:40

Site ID :

Project # : 07077067

Parameter	Dry Result	Det. Limit	Units	Method	Date	Dil.
Acenaphthylene	BDL	0.040	mg/kg	8270C	12/28/07	1
Benzo(a)anthracene	0.27	0.040	mg/kg	8270C	12/28/07	1
Benzo(a)pyrene	0.30	0.040	mg/kg	8270C	12/28/07	1
