Scott Zurn of Canadian Pacific RR called 11/30/18 to report that the RR had been in the process of closing an old rail road water well inside the City of Farson when they discovered PCS approximately 8 feet down the 12 inch by 20 foot deep well. Mr. Zurn indicated that they then returned the excavated soil to the site and planned to leave it there until more favorable weather, likely the spring, would allow for an investigation of the extent of the contamination even mentioning monitoring wells et. I informed Mr. Zurn that I would record his call and after talking with ESS Kurt Levetzow would inform DNR contaminated sites of the situation. I also told Mr. Zurn that in any case we or he should be in contact when their investigation commences.
