Ms. M. Sabrina Attaluri United States Postal Service 6800 W 64th St., Suite 100 Overland Park, Kansas 66202-4179

SUBJECT: Environmental assessment for property in Lamont, Iowa

Dear Ms. Attaluri:

Staff of the IDNR Solid Waste Section have had the opportunity to review and discuss the materials submitted regarding the environmental assessment for property at 618-622 Bush Street, Lamont, Iowa.

The department has been inundated with varied reports of contamination, generally stemming from environmental assessments conducted for the purpose of property transfer. Because the number of such sites far exceeds the resources we have available for addressing there, we have been forced to prioritize them. We will be dealing only with sites which we deem to be the most serious threats to human health. Our first priority is sites where there is an existing or imminent threat of human exposure to levels of contamination in excess of health based guidelines. A second group of sites, which we will deal with as resources are available, will include sites characterized by: very high levels of contaminants, the probability of large amounts of waste, and/or the likelihood of an ongoing release of contaminants.

Groundwater samples collected at the site do indicate the presence of several metals in excess of IDNR action levels. However, the situation does not appear to fit the criteria for an elevated priority, as described above. Therefore the IDNR will require no further action in this case. This judgment is based on information currently available to us and is subject to revision, if additional information suggests such a change to be warranted. It should be noted that many environmental assessments are cursory in nature and do not, therefore, provide adequate information to permit an evaluation with a high degree of confidence.

If you have any questions, please feel free to call me at 515/281-7040.

Respectfully.

Environmental Specialist
