Re: Fall 2022 Northern Drainageway Cover Inspection, Former Great Rivers Cooperative, Lockridge, Iowa

Dear Mr. Jacobson:

The Iowa Department of Natural Resources (DNR) has reviewed the inspection report and notes the establishment of a significant declining trend in the concentration and frequency of detections of banned pesticide product (DDT and daughter products DDD, DDE) as well as the other discontinued pesticides in drainage way sediment since monitoring began in 2001. Based on the history of monitoring data, it is the determination of the DNR that sediment sampling and cover inspections at the Former Great Rivers Coop site may be scaled back to an annual event. Therefore, the next sediment monitoring and cover Inspection report is not due until the fall of 2023.

If you have any questions or need further information please feel free to contact me at 1-515-725-8337.

Sincerely,

CC: Kevin Armstrong, GHD, 11228 Aurora Avenue, Des Moines, Iowa 50322-7905
