Review of Remedial Design Investigation Report

Dear Mr. Tollin:

The Iowa Department of Natural Resources (IDNR) received the Remedial Design Investigation Report on May 25, 2023. Thank you for the submission. The report summarizes sampling completed in the winter of 2022 to better investigate cVOC concentrations at the source location and confirm geologic conditions at the site for possible remedial actions.

Based off the report, the cVOC source area has been defined to the area around the former drainage ditch. Soil geotechnical and geochemical testing results indicate soils near the source area would be suitable for remedial actions, such as in-situ thermal remediation. The DNR appreciates the additional data collected during this and previous source area investigations. The data will be beneficial if targeted remediation at the site is to proceed in the future.

Please continue with semi-annual groundwater monitoring at the site. The next Groundwater Monitoring Report is due March 15, 2024.

Feel free to contact me with any questions at [\(515\) 721-7024](tel:5157217024) or by email at andrew.carver@dnr.iowa.gov.

Sincerely,

Andrew Carver, CGP# 2106
