Dear Mr. Lundberg:

As you know, when the Environmental Protection Agency (EPA) and the State have concluded all investigative and/or cleanup activities at a site, that site becomes eligible for "Archiving" from the active Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) data base. Archiving represents a site-wide decision or status indicating that no further interest exists at the site under the federal Superfund program based on available information. It is a comprehensive decision that no further site assessment, remedial, removal, enforcement, cost recovery, or oversight activities are being planned or conducted at the site. Archiving requires concurrence from the responsible Remedial Project Manager (RPM)/On-Scene Coordinator (OSC)/Site Assessment Manager (SAM) for the site, the EPA's Cost Recovery Unit, the EPA's Site Assessment Team Leader, the State Environmental Department, and lastly from the EPA's Information Management Coordinator.

Archive Note Forms and site information for the following sites are enclosed for your review and signature:

Table with 2 columns: SITE ID # and SITE NAME. Includes handwritten notes for each site entry.

These Archive Note Forms have been signed by the RPM/OSC/SAM, the EPA's Site Assessment Team Leader and the EPA's Cost Recovery Unit. Please review the forms and sign them (in the location designated for State concurrence) if you concur with archival of these sites. If you do not believe archival of a site is appropriate, please respond with your reasons for not concurring on that site.

DISCUSSION/RATIONALE FOR ARCHIVAL:

See the attached CERCLIS printout for the site.

The Progressive Foundry Disposal site, located on the property of Mr. Harold Devilbiss, is located 1.4 miles west of Perry, Iowa on Park Street. This site adjoins the North Raccoon River's east bank and is primarily used as a junkyard for automobile bodies, appliances, and drums from foundry casting operations. A Site Investigation (SI) conducted in 1986 reported elevated levels of metals and semivolatile compounds in samples collected on-site. However, these contaminants were not found in any off-site samples, and the site was referred back to the Iowa Department of Natural Resources (IDNR) for continued monitoring.

The U.S. Environmental Protection Agency (EPA) designated No Further Remedial Action Planned (NFRAP) status to the site in 1993, when the site was deferred to Resource Conservation and Recovery Act (RCRA) program. No known wells were installed under authority of the Comprehensive Environmental Response, Compensation and Liability Act/Superfund Amendments and Reauthorization Act (CERCLA/SARA). No further response under CERCLA/SARA is required. The site has been NFRAPed and archiving is appropriate.
