Good morning Matt and Scott,

EPA and our contractor (CH2M-Jacobs) anticipate starting a MiHPT investigation next week March 11 – 15) behind the former Ideal Dry Cleaners (Highway 3 PCE superfund site) source area and downgradient of the source (within city ROW). Access from the property owner was finally secured/signed yesterday so that is the main reason behind this later notice.

DPT work (based on next week's screening work) will follow sometime in the second part of April or early May (as of now). I will provide further updates as things are scheduled.
