Review of 2023 Annual Monitoring Reports**

Dear Ms. Robinson:

The Iowa Department of Natural Resources (DNR) received the First and Second Semi-Annual 2023 Monitoring Reports. Thank you for the submissions. The monitoring reports summarize light non-aqueous phase liquid (LNAPL) gauging and recovery in addition to groundwater monitoring completed at the site throughout 2023.

Based off the reports, LNAPL levels at the site post 2020 continue to generally decline. The decline in LNAPL thickness and recovery rates indicate previous remedial efforts and current recovery have been successful in removing a large portion of the LNAPL mass from the site. The DNR acknowledges the use of Wellbooms[®] at eight of the LNAPL recovery wells starting in October 2023. Additionally, groundwater concentrations at the site remain relatively stable.

Please continue with LNAPL recovery and groundwater monitoring at this time. Please notify the DNR if any changes to recovery/remediation systems occur.

Feel free to contact me with any questions at [\(515\) 721-7024](tel:515-721-7024) or by email at andrew.carver@dnr.iowa.gov.

Sincerely,

Andrew Carver, CGP# 2106
