**Re: Magellan Pipeline – Sioux City (4300 41<sup>st</sup> St, Sioux City, IA 51108)  
Contaminated Sites Database Site ID No. 105  
2024 Annual Monitoring Report**

Dear Ms. Owen:

The Iowa Department of Natural Resources (DNR), has reviewed the 2024 Annual Monitoring Report (report) submitted on February 7, 2025, by WSP USA on behalf of the Magellan Pipeline Company L.P. ([Doc# 42966](#)).

DNR acknowledges that benzene was observed above Iowa Statewide Wide Standards (SWS) for benzene during the February and August 2024 sample event in well in wells MW-31S, R-12, and R-15. Well MW-5 was above SWS for benzene during the August 2024 sample event. Toluene was detected below SWS in parameter well MW-8 during the February sample event and was not detected above minimum laboratory detection limit in August.

Monitoring wells MW-14, MW-15, and MW-16 were plugged and abandoned in accordance with IAC 567-39 on April 29, 2024. Well abandonments were approved by DNR in an email dated April 17, 2025 ([Doc# 41507](#)).

Sump-10 may be removed from routine gauging.

Sump-9, MPE-41, and TB-2 have recovered less than 0.1 gallons of product per month for no less than one year. Recovery activities at these wells may cease immediately. Once recovery activities have ceased, including the removal of any absorbent materials from the well, one (1) year of routine gauging will need to occur, during which time the product thickness may not measure greater than 0.02 foot.

DNR anticipates receipt of the 2<sup>nd</sup> Half 2025 Free Product Recovery and Annual Monitoring Report no later than February 28, 2026. If you have any questions or need further information please feel free to contact me at [515-415-1331](tel:515-415-1331) or by email at [brad.davison@dnr.iowa.gov](mailto:brad.davison@dnr.iowa.gov).

Sincerely

Brad Davison
