

Iowa Remelt site meeting 12/1/98

Why not RCRA?

- no RCRA permit
- RCRA doesn't have as much enforcement.

Why NFRAPed?

- PA score was based on desk top investigation - lots of assumptions
- SSI may have scored lower (red file is unavailable)

- NIOSH & OSHA have no authority b/c < 15 employees

Most significant issues:

- on-site workers
- movement of contamination from site (into river)
- fish data may be available...
- Markiewicz will have the Health Dept. request blood lead tests from employees. → will check w/ lead Project Manager...
- A IOHE will be prepared by Grieryic. If blood level is low, an RFA will be requested.
- Action memo can't be prepared yet → don't know how much it will cost to remove debris to get to soil.
- low blood lead levels will bring up more ?'s.
- workers may be tracking lead into homes.
