**Subject:** lagoon discharge

60874

Hal – this note follows our telephone conversation of earlier this morning. As you reported, the landfill lagoon is nearly full with the rain storms this last weekend. As we discussed, you may proceed to discharge about two feet from the lagoon to provide freeboard as an emergency measure. You should also sample the discharge. Let me know what the results are when you receive them. Also note that discharge is prohibited when the flow of Flint Creek is less than 10 CFS, however, I doubt that will be a problem this week.
