IOWA DEPARTMENT OF NATURAL RESOURCES
Environmental Services Division
Field Services and Compliance Bureau

Field Office #5

DATE: June 20, 2011

TO: Matt Culp

FROM: Jeff Theobald

SUBJECT: 8th St., Boone, IA – storm/sewer project (contaminated site)

A request from central office (Matt Culp) to look at a contaminated site area in which a storm/sewer project was being done in that area (site is along 8th St. in Boone).

6/17/11 – Met a Josh Reise (712-210-4243) from Foth, contractors who were doing the storm/sewer project. He showed me the area in which Black and Veatch did the supervision of the clean up of any contaminated soil. The area is about 150 to 200 feet long of 8th St. (from the picture below, it is from the first pole on the right to just beyond the third pole (both are darker in color)). He indicated that they found the contaminated soil about 6 to 9 feet down through out this area (elevation varied) – once they found it they only cleaned up what they needed for the project. The soil was put in 18 roll-off bins and each one was covered with a blue tarp and tied down (see picture). He indicated that they did not run into any ground water.
Josh indicated that Erin Hutting of Black & Veatch (913-961-0126) was on site until Monday (June 13th), to supervise the material and at that point Foth started replacing back dirt on the contaminated soil that wasn't disturbed because they were done with the project in this area and prepping the site to put the road back in. Could not visually detect any contaminated soil or smell any thing (see picture).
