Subject: Boone

Our Field Office staff (Jeff Theobald) visited the site around noon Friday to follow up on the telephone complaint I received today around 11 AM. The complaint indicated that contaminated soil was not being removed or was being used to back fill the utility work. The complaint was not specific if it was the local contractor or Foth (who was to address contaminated areas) using questionable soil. Upon Jeff's arrival he interviewed on site Foth staff and inspected the now filled trench and did not find any indication that contaminated soil was used as back fill. There was no basis for any action (Notice of Violation) and he called me to confirm that 18 roll offs are still on site containing contaminated soil that was producing noticeable odor.

We agreed however that these roll containers should be moved ASAP to a remote location (owned by Alliant) outside of Boone city limits if there is going to be prolonged (greater than 48 hours) storage in the roll offs.
