Elliot,

Here is the information that I received from your water supplier regarding the 7-13-23 bacteria sample. Bacteria sample is attached. It appears they followed DNR recommendations.

Thanks,
Aaron

Good afternoon Aaron,

We did flush the tanks and in talks with DNR previously they recommend that anytime we do any maintenance we put out a boil advisory, so that is what we did. Once the tank was cleaned out, we recharged the tank and took a bacteria sample. Once we had the results back on Friday, we lifted the boil advisory. I have attached the bacteria results from the hygienic lab. We don't need to notify you every time we do this, do we? Just want to make sure we are following protocol.

Sincerely,

Shane Schrader

Subject: Bacteria sample

Good morning.

Our office has received a complaint regarding recent flushing activities on July 13, 2023. The complainant is concerned they may have been mislead about the sampling. Complainant was concerned that sampling may not have been done as they were told. Looking at our database, there has not yet been a sample logged on or around July 13, 2023. Can you provide me with any results of any bacteria sampling that was done for Corridor Ridge on or around that date? Below are screenshots of the notices that the complainant received.

Thanks,

Aaron Pickens
