Hi Brad,

We completed sampling of PE-17 today. Sampling went well especially with the help of a table. The well PID reading was once again 0.0 PPM. No apparent petroleum odors, sheen, etc. I have attached a copy of the field notes as well as a copy of the chain of custody. The COC was partially filled in with sample IDs (bottle types) by the lab when I received a copy so ignore the crossed out sections. I filled out the COC with sample IDs we used on the sample bottle labels.

A Google Drive link to photos of the well condition on April 14 and today's sampling can be found here: <https://drive.google.com/drive/folders/1gXm7OilyMbLxRVHZYzHEeJvH8LdvdL7G?usp=sharing>

Let me know if you have any issues accessing the photos or if you have any follow-up questions.

Thank you,

**Ben Stracuzzi | Environmental Specialist**

Ben

Thx for report. You and Brian have become Hydrasleeve experts. I was unable to access photos (security wall here is too constraining); if you want to send photos in separate emails or as zip file, try that; maybe FTP would work, too.
