RE: Cogdill Farm Supply Site Visit
Dunlap, Iowa

On May 22, 2012, Tami Rice (DNR Contaminated Sites Section) and I visited the Cogdill Farm Supply facility in Dunlap, Iowa. We met with Mr. Sam Cogdill (owner, Cogdill Farm Supply) during the visit. Ms. Rice is the DNR project manager for the site assessment conducted at Cogdill Farm Supply. According to Ms. Rice, the Cogdill Farm Supply site assessment did not yield significant amounts of contamination. The main purpose of our visit was to observe the storage and handling practices at the facility and to offer any recommendations for improvement.

On the day of this inspection, the facility appeared to have proper storage and handling practices. Agricultural chemicals generally were not observed outside any of the structures. It was reported that all accumulated liquid within the concrete loading pad is pumped out and land applied on a routine basis.

Mr. Cogdill was commended for the operational practices observed at the facility and encouraged to continue operating as such.
