Certification page (103.1(4)"e")

An annual report summarizing the effect of the facility on groundwater and surface water quality shall be submitted to the department each year. The summary is to be prepared by an engineer registered in the state of Iowa.

	<p>I hereby certify that this engineering document was prepared by me or under my direct personal supervision and that I am a duly licensed Professional Engineer under the laws of the State of Iowa.</p>
	<p><u></u> Date: <u>11/25/2024</u> Timothy C. Buelow, P.E. License No. 14445 My license renewal date is December 31, 2025. Pages or sheets covered by this seal: <u>All except Appendix B-1.</u></p>

## EXECUTIVE SUMMARY

### ES.1 PERIOD OF REPORT COVERAGE

SCS Engineers (SCS), on behalf of Cargill Corn Milling, Inc. and with assistance from HR Green and their selected contractors, has completed the required groundwater sampling and analysis of the Cargill Sweeteners North America Coal Combustion Residue (CCR) Landfill (Landfill). HR Green and their selected contractors completed the groundwater sample collection, laboratory analyses, and statistical evaluation of the data. SCS utilized this information to prepare this Annual Water Quality Report (AWQR). The purpose of this AWQR is to document and statistically evaluate the groundwater sampling results since the 2023 AWQR up to and including the 2024 annual sampling event. This AWQR was prepared in accordance with the requirements of Iowa Administrative Code (IAC) 567-103, the site permit, and current requirements for implementation of the Hydrologic Monitoring System Plan (HMSP).

### ES.2 REPORT PRIORITY

The following summarizes report priorities associated with groundwater compliance at the Landfill:

- Department review urgency: Justification for the statistical methodology to be used in future reports is included in Section 5.3. A description of the proposed statistical methodology to be used in future reports is included in Appendix G.
- Department review impact on rules schedule: None.
- Actions or activities on hold pending Department review or comment: None.
- Actions and/or permit amendments needed: None.

### ES.3 SITE STATUS AND APPLICABLE RULES

- Landfill Status: Closed, Closure Permit
- Types of waste previously accepted: Coal Combustion Residue (CCR) and Gypsum Waste
- Applicable IAC rules: 567-103

### ES.4 COMMENTS

The following summarizes points of special emphasis:

As discussed in Section 5.3, intrawell statistical analyses appear appropriate for groundwater data at the Landfill. Geochemical parameter sampling will also be added to the 2025 sampling program to allow for further characterization and interpretation of groundwater quality influences at the Landfill.

## 1.0 ACRONYMS/ABBREVIATIONS

AL = Action Level  
CCV = Continuing Calibration Verification  
CL = Control Limit - Mean plus Two Standard Deviations (+/- for pH)  
DNR = Iowa Department of Natural Resources  
DO = Dissolved Oxygen  
GWPS = Groundwater Protection Standard  
GWQAP = Groundwater Quality Assessment Plan  
LEL = Lower Explosive Limit  
LCL = Lower Confidence Limit  
LCS = Laboratory Control Sample  
LN = Lognormal  
M+/-2SD = Mean Plus/Minus Two Standard Deviations  
MCL = EPA Maximum Contaminant Level  
MDL = Method Detection Limit  
N = Normal  
NC = No Change  
NM = Not Measured  
ORP = Oxidation-Reduction Potential  
PL = Prediction Limit  
QA = Quality Assurance  
QC = Quality Control  
RL = Reporting Limit  
SWS = DNR Statewide Standard for a Protected Groundwater Source  
SSI = Statistically Significant Increase Above Background  
SSL = Statistically Significant Level Above Groundwater Protection Standard  
SSS = Site-Specific Standard (Site-Specific GWPS)  
TSS = Total Suspended Solids  
UCL = Upper Confidence Limit

## 2.0 SITE BACKGROUND

### 2.1 SITE LOCATION

The Cargill Sweeteners North America Coal Combustion Residue CCR Landfill (Landfill) is depicted on Figure 1, Approved Monitoring Network. The Landfill property is located approximately 6.5 miles northwest of the City of Eddyville, Iowa. The legal description is as follows: SW ¼, NE ¼, and NW¼, SE¼, Section 30, Township 74 North, Range 16 West, Mahaska County, Iowa.

### 2.2 FACILITY

The site was originally the location of an open pit coal mine, operated by a previous owner. The east walls of the pit are shale bedrock, and spoils are deposited along the west side. An abandoned underground coal tunnel-mine is also located on the property.

Landfilling of CCR and gypsum waste was initiated in 1990 at two separate locations at the site; the North Landfill (CCR) and the South Landfill (Gypsum) units. It should be noted that lime sludge was also deposited in the North Landfill and CCR was also deposited in the South Landfill. The two landfill units were initially regulated under separate permits. Disposal operations in the South Landfill and North Landfill were discontinued in 1991 and 2000, respectively. Landfill cover was then applied and both units were maintained under interim status. The South Landfill unit was reopened and accepted CCR from January 2014 through January 2017. Closure of both landfill units was completed in early 2024 and a closure permit was issued by DNR on July 12, 2024.

### 2.3 GEOLOGY OF THE SITE

The following information pertaining to this section was obtained from the *Hydrogeologic Investigation Report* prepared by H. R. Green Company, October 1989:

*The upland divides are covered by a soil derived from thick loess. (Ladoga Silt Loam). This loess thins on the upper sideslopes (Clinton Silt Loam), grading into a shale-derived soil (Gosport Silt Loam) on the lower sideslopes, with alluvium-derived soils (Humeston Silt Loam) in the bottoms. This is a typical soil association for steep hillsides eroded into shale with only a minor glacial till component between the loess cap and shale bedrock.*

*Numerous roadcuts and strip mines in the area indicate that the total Pleistocene cover of unconsolidated sediment is quite thin and that the ridge and valley topography of much of the area is generally a reflection of the configuration of the bedrock surface.*

*The uppermost bedrock of the area is Pennsylvanian Age – Cherokee Group cyclothem deposits which includes shales, siltstones, sandstones, coals and sometimes thin limestone. Because of the repetitive nature of the cyclothem, the internal stratigraphy of the Cherokee Group is still largely unresolved. However, because the site is near the eastern edge of the Cherokee subcrop and the regional dip is toward the southwest, the site is probably in the lower part of the Cherokee package. Exposures in the mine headwall show the upper bedrock to be predominantly a dense organic rich black shale; overlain by a thin sandstone and multicolored shales; and underlain by a coal seam. A geologic profile of the east*

side of the headwall exposure is illustrated on Figure 9, as exposed in the foreground of Figure 2 (photograph).

The Mississippian Aquifer is the first bedrock aquifer beneath the site (Horick and Steinhilber, 1973). In this area, the aquifer is approximately 400 feet thick, dominated by limestone and dolomite lithologies and containing minor siltstone, shale and traces of gypsum. The top of the aquifer, below the Cargill site, is contoured at 600 feet elevation. Our soil boring indicate that the mining operation extended to an elevation of about 710 feet elevation on the west side of the property (details to follow), providing about 110 feet of Pennsylvanian Aquitard between the bottom of the strip mine and the top of the Mississippian Aquifer.

Copies of Figures 2 and 9 referenced above are included below.

For explanation, the headwall is shown on the right side of the photograph and mine spoils are shown on the left side of the photograph.

FIGURE 9

GEOLOGIC PROFILE IN HEADWALL

The following additional information was obtained from the *CCR Waste Disposal Area Supplemental Sampling Work Plan Gypsum/Fly Ash Landfill* prepared by Howard R. Green Company, March 29, 2007.

*The two Cargill landfills areas under consideration in this Work Plan were constructed within an area formerly occupied by an abandoned tunnel/strip mine site. Tunnel mining (Thompson Mine) was being practiced on this site in the 1930s, and continued until at least 1942. Historical records are unclear, but it is known strip mining (currently known as the McGlothlen Abandoned Mine Land by the Iowa Department of Agriculture and Land Stewardship (IDALS) occurred subsequent to the demise of the tunnel mines, likely from the mid-1950s to the mid-1970s. As strip mining progressed across the site from west to east, the high-wall (bedrock outcrop) was exposed along the easterly boundary of the two landfill areas. The high-wall was left exposed along the easterly boundary of what is the current fly ash cell, and at the old tunnel mine areas easterly of what is the former gypsum fill cell. As strip mining progressed, shale-derived mine spoils were chaotically pushed westward, behind the active mining operation. These spoils remain today within the landfill areas, and form a ridge along the westerly edge of the landfill cells.*

## **2.4 HYDROLOGY OF THE SITE**

The following information pertaining to this section was obtained from the *Hydrogeologic Investigation Report* prepared by H. R. Green Company, October 1989:

*In this shallow upland system, the groundwater flow directions are clearly patterned after the surface water drainage. Since the excavation of the strip mine, which created free drainage to the headwall cuts, the shallow groundwater divide beneath the ridge crest has probably shifted a few tens of feet to the east and south. A few damp spots could be found along the basal loess outcrops in the east highwall in November, 1988. In wet years these would be expected to expand laterally and become an extensive damp zone, evaporating slow groundwater discharge.*

*Groundwater piezometry for the Cargill site, for early 1989, is illustrated on Figure 36. Data is combined from monitoring wells plus available ponds and seeps. Note that the gradients are very steep across the property, indicating low permeability materials. The steepest gradients are near the northeast edge, where the upper geologic units have been completely stripped away in the highwall. This forms an exceedingly "impermeable" boundary because groundwater flow evaporates at the face of the highwall and cannot continue to flow at the upper levels. However, the gradient and minor flow continues down and northwestward through the shales below. The gradient is more gentle through the spoil area in the north-central part of the site because the spoils are made from crushed shale and are somewhat more permeable. The most gentle gradients are in the southeast corner of the property where still more permeable loess ( $k \sim 10^{-4}$  cm/sec) permits more rapid lateral flow of groundwater. Overall, the shallow groundwater flow system is still northwestward toward the valley of Little Bluff Creek.*

The following information pertaining to this section was obtained from the *CCR Landfill 2023 Annual Water Quality Report* prepared by HR Green, Inc., November 30, 2023.

*The groundwater flow directions at the site reflect surface topography. Overall, the shallow groundwater flow system is west-northwest toward the valley of Little Bluff Creek, which is likely unchanged from the pre-mining times. Excavation of the strip mine created free drainage of the high wall cuts resulting in a shifting of the shallow groundwater divide beneath the ridge crest toward the east and south, though this shift has been somewhat mitigated by subsequent filling.*

The following information pertaining to this section was obtained from the CCR Waste Disposal Area Supplemental Sampling Work Plan Gypsum/Fly Ash Landfill prepared by Howard R. Green Company, March 29, 2007.

*The Mississippian Aquifer is the first bedrock aquifer occurring beneath the Pennsylvanian formation. The potentiometric surface of this aquifer indicates a strong upward hydraulic gradient, which serves as added protection to the aquifer below. The aquifer is separated from the surficial deposits in most places by an aquiclude of Pennsylvanian shales.*

## **3.0 FIGURES DISCUSSION**

The following figures are attached.

### **3.1 FIGURE 1 – APPROVED MONITORING NETWORK**

The Landfill property and hydrological monitoring system plan (HMSP) network is depicted in **Figure 1**. **Figure 1** indicates the locations of each monitoring well.

### **3.2 FIGURE 2 – GROUNDWATER CONTOURS**

A groundwater contour map based on water levels measured in the monitoring wells during the April 2024 groundwater sampling event is included as **Figure 2**. **Figure 2** indicates a generally southerly flow direction through the North Fill Area and a generally southwesterly flow direction through the South Fill Area.

## **4.0 QA/QC SUMMARY**

Date indicates the date(s) of sampling.

### **4.1 APRIL 17, 2024 (2024 ANNUAL SAMPLING EVENT)**

Based on the QA review, no samples were rejected as unusable due to QC failures. In general, the quality of the analytical data for this reporting period does not appear to have been compromised by analytical irregularities and results affected by QC anomalies are qualified with the appropriate data flags, which are listed in the laboratory report in **Appendix B-1**. Data validation documentation can be found in **Appendix B-2**.

## 5.0 DATA EVALUATION

Statistical analyses in accordance with the requirements of IAC 567-103, the closure permit, and subsequent permit amendments and correspondence were conducted for the groundwater analytical data collected during the 2024 annual sampling event. The statistical evaluation conducted by Groundwater Stats Consulting for samples collected during the 2024 annual sampling event is located in **Appendix D** of this report.

### 5.1 DATA EVALUATION

Groundwater monitoring for the Landfill consists of samples from two upgradient monitoring wells located on the northeast and southwest corners of the Landfill property and from six downgradient monitoring wells, four located south of the North Landfill Unit and two located south of the South Landfill Unit. Monitoring for the landfill also consists of samples collected from groundwater underdrains, one for the North Landfill Unit (Fly Ash North #002) and one for the South Landfill Unit (Gypsum West #005).

There were six intrawell prediction limit exceedances detected based on 2024 sampling results as listed in **Table 1**. Half of the prediction limit exceedances detected based on 2024 sampling results were attributed to monitoring well MW-9.

Based on a review of concentrations listed in the Summary of Groundwater Chemistry in **Appendix C**, exceedances of action or advisory levels were largely associated with cobalt, lithium, and manganese as listed in **Table 9**. Manganese and lithium have generally exceeded the regulatory action or advisory levels established for this Landfill at most monitoring wells since sampling for these constituents began, including upgradient monitoring well MW-26 for both constituents and upgradient monitoring well MW-6 for lithium. Cobalt has generally exceeded the regulatory action or advisory levels established for this Landfill at most monitoring wells associated with the North Landfill Unit since sampling for these constituents began, including upgradient monitoring well MW-26.

### 5.2 TRENDING IN MONITORING WELLS

Mann Kendall trend analysis conducted at a 99% confidence level ( $\alpha=0.01$ ) for the groundwater monitoring wells indicated no statistically significant trends were present in the data sets during this reporting period. The trend analysis is included in **Appendix E**.

### 5.3 STATISTICAL METHODOLOGY JUSTIFICATION

As discussed in the call with DNR on October 3, 2024, intrawell statistical evaluations are believed to be appropriate for this site due to the extent of mining operations and wide distribution of mine spoils at the site. With the exception of upgradient monitoring well MW-6, all site monitoring wells are believed to be located in areas of previous mining and/or mining spoil deposits as evidenced by the pictures and figures contained in the Hydrogeologic Investigation Report prepared by H. R. Green Company, dated October 1989. The presence of mine spoils is also supported by the boring logs. The relevant figures from this report can be found in **Appendix F** to this report. Based on this information, interwell statistical comparisons of concentrations in downgradient monitoring wells located in areas of previous mining and/or mining spoil deposits to the concentrations at upgradient monitoring well MW-6, which is located in undisturbed loess, are not directly comparable.

Geochemical analysis of the available water quality indicators shows that concentrations of the water quality indicators at the site prior to establishment of the landfill were already highly variable across the site. A Schoeller graph of the available geochemical indicators sampled from site borings in 1989 is included in **Appendix F – All 1989 Sample Points** which shows the variability in groundwater concentrations of the geochemical indicators across the site.

The Landfill underdrains drain groundwater beneath the Landfill units and direct it to the outlets on the south side of the Landfill property. The areas of groundwater drainage beneath the Landfill units are all located in areas of previous mining activity and/or mining spoil deposits. As stated previously, interwell statistical comparisons of groundwater concentrations in areas of previous mining activity and/or mining spoil deposits to groundwater concentrations at upgradient monitoring well MW-6, which is located in undisturbed loess, are not directly comparable. Groundwater underdrain discharge statistical comparisons to groundwater monitoring well samples are also generally not directly comparable due to the difference in sample type and sample collection methodology. When comparing geochemical indicators in the underdrains to the mined area prior to establishment of the landfill (88-MW-13 (89)) and upgradient monitoring well MW-26 which is located in areas of mine spoil deposits, similar geochemical profiles emerge as shown in **Appendix F – Background/Groundwater Underdrains**. This data suggests that the character of the groundwater quality in the groundwater underdrains may be more related to past mining activities than the Landfill. Further and complete geochemical analysis of the underdrains, groundwater monitoring wells, and leachate from each Landfill unit is recommended in 2025. The following geochemical parameters will be added to the sitewide sampling list for 2025 which is recommended to occur in spring 2025: Bicarbonate, Carbonate, Calcium, Magnesium, Potassium, Chloride, Sodium, and Sulfate.

Comparisons of geochemical parameters and intrawell prediction limits are believed to be better methods for determining whether a release from the Landfill units is occurring at this site. The 2025 AWQR will contain geochemical analysis and intrawell prediction limits of the site monitoring wells and groundwater underdrains. Additionally, at least one leachate sample from each Landfill unit will be collected in 2025 and analyzed for the eight geochemical parameters to provide an end member signature for leachate. The proposed statistical methodology for intrawell comparisons is included in **Appendix G**.

## 6.0 RECOMMENDATIONS

### 6.1 SITE IMPACT ON GROUNDWATER

Based on the monitoring results and the previous discussion, it appears that past mining activities pre-dating Landfill development have had a significant influence on the character of groundwater at the site. Future geochemical and statistical analysis will be conducted to better determine the source of groundwater quality impact at the site.

### 6.2 PROPOSED MONITORING

The groundwater monitoring program is summarized in **Table 1**. No changes to the HMSP monitoring program are recommended at this time with the exception of adding geochemical parameters listed in Section 5.3 to the sitewide parameter list for the 2025 sampling event. It is recommended that sampling continue for calendar year 2025 as summarized in **Table 2**.

### 6.3 PROPOSED MONITORING WELL CHANGES

Monitoring well performance is summarized in **Table 4**. No proposed changes to the existing monitoring wells are recommended at this time.

				Groundwater Elevation (Ft MSL)	728.70	
				Measured Well Depth (ft)	27.0	
				Submerged screen	N	

Comments:

- 1) Measured well depths were less than 1.0 foot shallower than the installed depths where measured; however, several monitoring wells have consistently measured more than 1.0 feet deeper than the installed depth. It is likely either the well construction information was recorded incorrectly or the wells were extended post-installation and the extensions were not recorded.

Table 5  
Background and GWPS Summary  
2024 Annual Water Quality Report  
Cargill CCR Landfill  
Permit No. 62-SDP-04-89C

Note: Background datasets for intrawell statistical analyses are provided in Appendix D, Attachment C.

Comments:

- 1) **Water quality results and effectiveness of the statistical data evaluation criteria:** Statistical evaluations consist of intrawell prediction limits.
- 2) **Changes to the previous statistical method during reporting period:** None.

**Table 6**  
**Summary of Well/Detected Constituent Pairs With No Immediately Preceding Prediction Limit Exceedances**  
**2024 Annual Water Quality Report**  
**Cargill CCR Landfill**  
**Permit No. 62-SDP-04-89C**

Well	Constituent	Units	Result	Background Standard
MW-9	Iron	mg/L	0.296	0.175
	Manganese	mg/L	0.233	0.01
	Zinc	mg/L	0.0232	0.02
MW-10	Chloride	mg/L	6.76	5.18
MW-11	Zinc	mg/L	0.235	0.0566
MW-13R	Chloride	mg/L	28	24.53

Note: Table includes prediction limit exceedances identified during the 2024 sampling event that were not identified as prediction limit exceedances in the previous year.

Comments:

- 1) **Problems with the current HMSP network:** None.
- 2) **Schedule to implement remedies:** Not applicable.
- 3) **Alternative constituent or sample frequency changes:** None.
- 4) **Significant changes to prediction limits:** None.

**Table 7**  
**2024 Prediction Limit Exceedances**  
**2024 Annual Water Quality Report**  
**Cargill CCR Landfill**  
**Permit No. 62-SDP-04-89C**

Key

	Denotes ongoing prediction limit exceedances that were identified as prediction limit exceedances during this reporting period and the previous reporting period at least once during each reporting period.
	Denotes newly identified prediction limit exceedances in the 2024 reporting period. Newly identified is defined as occurring at least once in the current reporting period but not in the immediately preceding reporting period.

Well	Constituent	Units	Result	Background Standard	Action Level/ Statewide Standard
MW-9	Iron	mg/L	0.296	0.175	-
	Manganese	mg/L	0.233	0.01	0.3
	Zinc	mg/L	0.0232	0.02	2.0
MW-10	Chloride	mg/L	6.76	5.18	-
MW-11	Zinc	mg/L	0.235	0.0566	2.0
MW-13R	Chloride	mg/L	28	24.53	-

Notes: None.

Comments:

- 1) **Problems with the current HMSP network:** None.
- 2) **Proposed remedies:** None.
- 3) **Alternative constituent or sample frequency changes:** None.
- 4) **Plume delineation strategies:** Not Applicable.
- 5) **Property owner notifications:** Not applicable.

**Table 8**  
**Summary of Groundwater Chemistry**  
**2024 Annual Water Quality Report**  
**Cargill CCR Landfill**  
**Permit No. 62-SDP-04-89C**

The Summary of Groundwater Chemistry is located in Appendix C.

Appendix A  
Field Sampling Forms

# GROUNDWATER SAMPLING AND/OR GROUNDWATER ELEVATION MEASUREMENT FORM

Site Name Cargill Sweeteners - North America CCR Landfill Permit No. 62 - SDP - 04 - 89P

Monitoring Well/Piezometer No. MW - 06

Upgradient  Downgradient

Name of person sampling Randy Gavin and Tyler Merritt

## A. MONITORING WELL/PIEZOMETER CONDITIONS

Well/Piezometer Properly Capped? (please check)  Yes  No

If no, explain \_\_\_\_\_

Standing Water or Litter? (please check)  Yes  No

If yes, explain \_\_\_\_\_

## B. GROUNDWATER ELEVATION MEASUREMENT (± 0.01 foot, MSL)

Elevation:

Top of inner well casing 810.52 Ground Elevation ----

Depth of Well 78.40 Inside Casing Diameter (in inches) 2.00

Equipment Used Solinst 101 P7 Water Level Meter

Groundwater Level (± 0.01 foot below top of inner casing, MSL):

	Date/Time	Depth to Groundwater	Groundwater Elevation
Before Purging	4/18/2024 8:45	43.37	767.15
*After Purging	----	----	----
*Before Purging	4/18/2024 8:45	43.37	767.15

## \*C. WELL PURGING

Quantity of Water Removed from Well (gallons) ----

No. of Well Volumes (based on current water level) ----

Was well pumped/bailed dry? No

Equipment used:

Bailer type Discreet Interval Poly Bailer Dedicated Bailer? No

Pump type \_\_\_\_\_ Dedicated Pump? \_\_\_\_\_

If not dedicated, method of cleaning Disposable

Please mail completed form to: Iowa Department of Natural Resources, Land Quality Bureau, 502 E 9<sup>th</sup> St, Des Moines IA 50319  
Questions? Call or Email: Nina Booker Environmental Engineer Sr., 515-725-8309, nina.booker@dnr.iowa.gov

**\*D. FIELD MEASUREMENT**

**Weather Conditions** Light rain, 47°F, NE wind @ 10-20 mph, 30.1" Hg

**Field Measurements (after stabilization):**

**Temperature** 11.45 **Units** °C

**Equipment Used** In-Situ AquaTroll 500 Multiparameter Water Quality Meter

**pH** 7.16

**Equipment Used** In-Situ AquaTroll 500 Multiparameter Water Quality Meter

**Specific Conductance** 1,246.3 **Units** µmhos/cm @ 25°C

**Equipment Used** In-Situ AquaTroll 500 Multiparameter Water Quality Meter

**Comments**

No purge protocol.

**Certification**

I certify under penalty of law I believe the information reported above is true, accurate and complete.

Was well pumped/bailed dry? No

Equipment used:

Bailer type \_\_\_\_\_ Dedicated Bailer? \_\_\_\_\_

Pump type Geotech Geopump Peristaltic Pump Dedicated Pump? No

If not dedicated, method of cleaning Triple deionized water rinse

Please mail completed form to: Iowa Department of Natural Resources, Land Quality Bureau, 502 E 9<sup>th</sup> St, Des Moines IA 50319  
Questions? Call or Email: Nina Booker Environmental Engineer Sr., 515-725-8309, nina.booker@dnr.iowa.gov

**\*D. FIELD MEASUREMENT**

Weather Conditions Partly cloudy, 63°F, WNW wind @ 15-25 mph, 29.9" Hg

**Field Measurements (after stabilization):**

Temperature 14.29 Units °C

Equipment Used In-Situ AquaTroll 500 Multiparameter Water Quality Meter

pH 5.09

Equipment Used In-Situ AquaTroll 500 Multiparameter Water Quality Meter

Specific Conductance 2,388.6 Units µmhos/cm @ 25°C

Equipment Used In-Situ AquaTroll 500 Multiparameter Water Quality Meter

**Comments**

Low flow protocol.

### Laboratory Analytical Data Sheets

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Rose Amundson  
HR Green, Inc  
PO BOX 9009  
Cedar Rapids, Iowa 52409  
Generated 4/25/2024 10:39:15 AM

## JOB DESCRIPTION

Cargill Landfill - 718160J09-0685

## JOB NUMBER

310-279297-1

# Eurofins Cedar Falls

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

## Authorization

## Job Narrative 310-279297-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### Receipt

The samples were received on 4/18/2024 1:30 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were -0.1°C and 0.4°C.

### HPLC/IC

Method 9056A\_ORGFM\_28D: The following samples were diluted due to the nature of the sample matrix: MW-06 (310-279297-1), MW-08 (310-279297-2), MW-09 (310-279297-3), MW-10 (310-279297-4), MW-11 (310-279297-5), MW-12R (310-279297-6), MW-13R (310-279297-7), MW-26 (310-279297-8), Fly Ash North 002 (310-279297-9) and Gypsum West 005 (310-279297-10). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins Cedar Falls

## Qualifiers

### Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

### General Chemistry

Qualifier	Qualifier Description
HF	Parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. Sample was analyzed outside of hold time.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

## Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
6020B	3005A	Water	Lithium

Question	Answer	Comment
Radioactivity wasn't checked or is <=/ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

### Proposed Statistical Methodology for Intrawell Prediction Limits

# Statistical Method and Output

## Purpose

The purpose of this document is to provide the process of statistical evaluation of groundwater analytical data collected from the monitoring network.

### *Diagnostic and Exploratory Evaluations and Tests of Assumptions*

The detection and assessment monitoring statistical programs include diagnostic and exploratory evaluations and statistical tests of assumptions, as appropriate, including the following:

- Time Series Plots
- Shapiro-Wilk test for normality
- Ohio Environmental Protection Agency (EPA) Method for outliers
- Mann-Kendall/Sen's Slope trend test

### *Management of Non-Detect Data*

Non-detect values in the dataset are managed using simple substitution or the Kaplan-Meier estimator. If less than 15% of the data were non-detects, simple substitution is used, where non-detect values are assigned a concentration of one-half ( $\frac{1}{2}$ ) of the practical quantification limit (PQL). If greater than 15% but less than 50% of the data are non-detects, the Kaplan-Meier estimator is used to define the distribution for the dataset. If non-detects comprise greater than 50% of the available data, non-parametric statistical methods are used.

### *Management of Outliers*

Background datasets are evaluated for outliers using the Ohio EPA Method as included in the Sanitas™ statistical software program and described below, which includes the use of Dixon's, Rosner's, and Tukey's outlier tests, as appropriate based on the diagnostic tests, for the datasets that contain less than 75% of the measured concentrations below the PQL. Outliers are not confirmed unless a physical cause or explanation for the outlier is determined.

### *Management of Data (ND data < 75%)*

If less than 75% of the background dataset is below the PQL, outliers are statistically evaluated using the following guidelines.

- A parametric dataset with  $n < 20$  was evaluated with the Dixon's outlier test.
- A parametric dataset with  $n \geq 20$  was evaluated with the Rosner's outlier test.
- A non-parametric dataset was evaluated with the Tukey's outlier test.

In accordance with the Ohio EPA Method, if a statistically significant outlier is not found using the above tests, but the highest value data point exceeds the second highest data point by an order of magnitude, the highest point is considered an outlier.

### *Management of Data (ND data $\geq$ 75%)*

If greater than or equal to 75% of the background dataset is less than the PQL, outliers are statistically evaluated using the following guidelines.

- Single detection  $\geq$  the PQL:
  - o If  $\geq 50\%$  of the background dataset has detections  $\geq$  the method detection limit (MDL), any value  $\geq$  two times the PQL of background is considered an outlier.
  - o If  $< 50\%$  of the background dataset has detections  $\geq$  the MDL, any value  $\geq$  the PQL of background is considered an outlier.

- Two or more detections  $\geq$  the PQL:
  - o If  $\geq$  50% of the background dataset has detections  $\geq$  the MDL, any value  $\geq$  three times the PQL of background is considered an outlier.
  - o If  $<$  50% of the background dataset has detections  $\geq$  the MDL, any value  $\geq$  two times the PQL of background is considered an outlier.

Confirmed outliers, if any, are shown in the Summary of Groundwater Chemistry included in the Annual Water Quality Report.

### ***Detection Monitoring Statistical Program***

The detection monitoring statistical program for the Cargill Sweeteners - North America - CCR Landfill is based on the EPA's Unified Guidance for Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities (EPA 530/R-09-007). Intrawell prediction limits with retesting were selected as the appropriate statistical method for the determination of statistically significant increases (SSIs) over background for inorganic constituents with historical detections in the background dataset. Prediction limits are established using the process below. Data from the most recent sampling event is compared to the prediction limits for the determination of SSIs.

### ***Intrawell Prediction Limits with Retesting***

- If the dataset has a normal distribution (or can be transformed to a normal distribution using Ladder of Powers), parametric intrawell prediction limits are calculated if at least six datasets have been collected.
- If the dataset does not have a normal distribution (and cannot be transformed to a normal distribution using Ladder of Powers) or has greater than 50% non-detects, nonparametric intrawell prediction limits are calculated if at least six datasets have been collected.
- If an SSI above the prediction limit is indicated, retesting samples using the 1-of-3 retesting scheme should be collected prior to the next regularly scheduled sampling event with temporal sample spacing consideration to provide samples with greater independence. If the retesting results are both above the prediction limit, the SSI is confirmed, and the monitoring well should be placed into the assessment monitoring program or discharge from the monitoring point should be treated with the leachate for groundwater underdrains. If any retesting sample concentration is below the prediction limit, the SSI is not confirmed, and the monitoring point continues in the detection monitoring program.

### ***Updating the Background Dataset for Intrawell Prediction Limits***

If no SSI is confirmed for any two-year period, the intrawell background dataset will be updated using the following procedure:

- Test for normality (normal distribution) of the dataset either outright or through a transformation using Ladder of Powers:
  - o Shapiro-Wilk test
- Test for statistically significant trends:
  - o Mann-Kendall/Sen's Slope trend test

If an increasing trend is detected, the monitoring point will be placed into the assessment monitoring program or the discharge treated with the leachate for groundwater underdrain discharge points.

- If the dataset has a normal distribution and no trend is present, conduct a two-sample Welch's t-test at a 0.01 significance level to compare current background to the most recent two years of detection monitoring data.

If Welch's t-test test is significant and shows that the most recent two years of concentration data appear to be increasing, the background will not be updated.

- If the dataset does not have a normal distribution and no trend is present, conduct a two-sample non-parametric Wilcoxon rank-sum test (also known as the Mann-Whitney test) at a 0.01 significance level to compare current background to the most recent two years of detection monitoring data.

If the Wilcoxon rank-sum test is significant and shows that the most recent two years of concentration data appear to be increasing, the background will not be updated.

- If the Welch's t-test and the Wilcoxon rank-sum test are not significant, the most recent two years of detection monitoring data will be added to the intrawell background dataset.
- Establish prediction limits based on the updated intrawell background dataset.

The process will repeat every two years in which an SSI is not confirmed.

### ***Double Quantification Method***

The quasi-statistical "double quantification" method is used for constituents not detected in the associated background data set. If a constituent is detected in the compliance dataset that has not been historically detected in the background dataset, that constituent must be retested before the next regularly scheduled sampling event. If the retesting results confirm the original detection with a quantifiable detection, the SSI is confirmed, and the monitoring point must be placed into the assessment monitoring program.

### **Assessment Monitoring Statistical Program**

Confidence intervals or confidence bands, as appropriate, were selected as the appropriate statistical methods for comparison of the groundwater analytical data against a fixed groundwater protection standard (GWPS). The assessment monitoring statistical evaluations are performed using the most recent eight samples or all samples if less than eight samples were available. The confidence intervals or confidence bands used for the assessment monitoring statistical evaluation are established using the process below. Transformation of the distribution is not considered.

### **Confidence Intervals or Confidence Bands**

- A parametric confidence interval around a normal mean is calculated if the dataset has a normal distribution and no statistically significant trend is present.
- A non-parametric confidence interval around a median is calculated if the dataset does not have a normal distribution and no statistically significant trend is present.
- Non-parametric confidence bands around a Theil-Sen trend line are calculated if the dataset has a statistically significant trend.

Notes:

- 1) \*MH 16 is the mine manhole (MH) that extends beneath the liner. CS 1 is the outfall manhole of the lagoon. Both are not applicable to head levels on the liner.
- 2) Precipitation data for December 2023 - October 2024 obtained from weather.gov.

Comments:

**Reporting Period:** December 2023 - October 2024.  
**Approved Changes to Leachate Collection System:** None.  
**Proposed Changes to Leachate Collection System:** None.  
**Maintenance Performed on Leachate Collection System:** None.  
**Volume of Leachate Recirculated or Applied to Landfill Cover:** None.  
**Volume of Leachate Treated Off-Site:** 324,000 gallons were transported to the Cargill-Eddyville Treatment Plant.

## Appendix I

### Monthly Post-Closure Landfill Inspection Reports

Landfill Post-Closure Monthly Observation Checklist			
Facility Information			
Facility:	Cargill Eddyville CCR Landfill	Permit #	Post Closure Permit Not issued yet
Location:	Eddyville, Iowa	Type:	CCR Landfill
Inspection Conditions			
Inspector	Ben Johnson	Date and Time	12:00 5/23/24
Leachate Pond Level	23", ECOSYSTEMS handling		
Weather Conditions			
Wind:	11 MPH	Temperature:	70°F
Other:			
A. General Conditions			
1. Are Storm Water Control Structures (Sedimentation basins, Terraces, Letdowns, Culverts) in good condition?	Yes	No	Comments
	X		
B. Final Cover			
1) Is there adequate growth of grass on the final cover?	Yes	No	Comments
	X		
2) Is there Evidence of settlement or depressions in the final cover?	Yes	No	Comments
		X	
3) Is there evidence of ponding water on the final cover?	Yes	No	Comments
		X	ponding visible not over cells
4) Is there Evidence of erosion of the final cover?	Yes	No	Comments
		X	
5) Is there evidence of sediment build-up in the storm water structures on or off-site?	Yes	No	Comments
		X	
6) Are there trees, shrubs, or other unwated plants growing on the final cover?	Yes	No	Comments
		X	
C. Miscellaneous Requirements			
1) Is there evidence of leachate seeps? If yes, not if flowing or not?	Yes	No	Comments
		X	

Note any Repairs to be made or that have been made, include locations on a site map or describe below

**CCR Landfill SWPPP inspection**

Frequency: monthly

**Weekly required if construction activities are occurring for closure or Quarterly if no construction is**

This inspection is:  Weekly (Construction)  Quarterly (no construction occurring)

Inspector: Ben Johannsen

Date: 5/23/24

Items covered in Inspection:		
Adequate	Inadequate*	must document corrective actions if any finding is inadequate
<input checked="" type="checkbox"/>		Cover materials are applied prior to adverse weather and to prevent
<input checked="" type="checkbox"/>		Leachate load and haul area is accessible and well maintained.
<input checked="" type="checkbox"/>		The site is graded and drains in a manner which prevents water flow onto
<input checked="" type="checkbox"/>		The finished surface of the fill area is covered with soil and seeded
<input checked="" type="checkbox"/>		Two (2) feet of compacted earth cover is applied to areas not utilized for
<input checked="" type="checkbox"/>		The SWPPP is correct and the GP1 is adequate for the coverage period.

\*Corrective Action or Comment on Inspection:

CCR Landfill SWPPP inspection

Frequency:

Weekly required if construction activities are occurring for closure or Quarterly if no construction is

This inspection is:

Weekly  
(Construction)

Quarterly (no construction occurring)

Inspector:

Ben Schanzman

Date:

6/7/2024

Items covered in Inspection:

Adequate	Inadequate*	must document corrective actions if any finding is inadequate
<input checked="" type="checkbox"/>		Cover materials are applied prior to adverse weather and to prevent
<input checked="" type="checkbox"/>		Leachate load and haul area is accessible and well maintained.
<input checked="" type="checkbox"/>		The site is graded and drains in a manner which prevents water flow onto
<input checked="" type="checkbox"/>		The finished surface of the fill area is covered with soil and seeded
<input checked="" type="checkbox"/>		Two (2) feet of compacted earth cover is applied to areas not utilized for
<input checked="" type="checkbox"/>		The SWPPP is correct and the GP1 is adequate for the coverage period.

\*Corrective Action or Comment on Inspection:

may need to look into erosion repair on side of the road between cells

**Items covered in Inspection:**

<b>Adequate</b>	<b>Inadequate*</b>	<b>must document corrective actions if any finding is inadequate</b>
X		Cover materials are applied prior to adverse weather and to prevent excessive dust.
X		Leachate load and haul area is accessible and well maintained.
X		The site is graded and drains in a manner which prevents water flow onto fill areas, significant erosion, and ponding.
X		The finished surface of the fill area is covered with soil and seeded
X		Two (2) feet of compacted earth cover is applied to areas not utilized for more than two (2) months.
X		The SWPPP is correct and the GP1 is adequate for the coverage period.

**\*Corrective Action or Comment on Inspection:**

# LANDFILL POST-CLOSURE MONTHLY OBSERVATION CHECKLIST

## FACILITY INFORMATION

Facility: <u>Cargill Sweeteners - North America Landfill - CCR</u>	Permit No.: <u>62-SDP-04-89C</u>
Location: <u>Eddyville, Iowa</u>	Permit Issued: <u>July 12, 2024</u>
Type: <u>CCR Landfill (Closed)</u>	Permit Expires: <u>May 16, 2034</u>

## INSPECTION INFORMATION

Inspector: <u>Kevin Janson</u>	Date and Time: <u>8/28/24 8:00 am</u>
Other: <u>Steve Phillips, Mike Septer</u>	

## WEATHER CONDITIONS

Wind: <u>0-5 mph</u>	Temperature: <u>70 °F</u>
Other: <u>Dew</u>	

### A. GENERAL CRITERIA

- 1) Are storm water control structures (sedimentation basins, terraces, letdowns, culverts) in good condition?

Yes	No	Comments
<input checked="" type="checkbox"/>	<input type="checkbox"/>	

### B. FINAL COVER

- 1) Is there adequate growth of grass on the final cover?
- 2) Is there evidence of settlement or depressions in the final cover?
- 3) Is there evidence of ponding water on the final cover?
- 4) Is there evidence of erosion on the final cover?
- 5) Is there evidence of sediment build-up in storm water structures on- or off-site?
- 6) Are there trees, shrubs, or other unwanted plants growing on the final cover?

Yes	No	Comments
<input checked="" type="checkbox"/>	<input type="checkbox"/>	
<input type="checkbox"/>	<input checked="" type="checkbox"/>	
<input type="checkbox"/>	<input checked="" type="checkbox"/>	
<input type="checkbox"/>	<input checked="" type="checkbox"/>	
<input type="checkbox"/>	<input checked="" type="checkbox"/>	
<input type="checkbox"/>	<input checked="" type="checkbox"/>	

### C. MISCELLANEOUS REQUIREMENTS

- 1) Is there evidence of leachate seeps? If yes, note if flowing or not.

Yes	No	Comments
<input type="checkbox"/>	<input checked="" type="checkbox"/>	

Note any repairs that need to be made or that were made. Include locations on a site map or describe below.
