Executive Summary

This 2025 Spring Statistical Analysis Report summarizes groundwater monitoring activities, associated data, and statistical analyses prepared by HDR Engineering, Inc. (HDR), on behalf of the City of Iowa City (City) for the City of Iowa City Sanitary Landfill (Landfill) during the 2025 Spring Semiannual Groundwater Monitoring Event. These activities were conducted in general accordance with the Iowa Administrative Code (IAC) 567 Chapter 113.10, and the additional Iowa Department of Natural Resources (IDNR) requirements specified in the Landfill's solid waste disposal permit number 52-SDP-01-72P, subsequent permit amendments, and the most recently approved Hydrologic Monitoring System Plan (HMSP).

Period of Report Coverage

This 2025 Spring Statistical Analysis Report summarizes results from the Spring 2025 Semiannual Groundwater Compliance Monitoring Event.

Detection Monitoring

During the Spring 2025 Monitoring Event, groundwater underdrain locations ST-1, WT-1, WT-2, WT-3, and WT-4 were the only locations monitored under the Detection Monitoring Program. Statistically significant increases (SSIs) were detected in groundwater samples collected during the Spring 2025 Semiannual Compliance Monitoring Event from underdrains WT-1 (chromium, copper, lead, and vanadium), WT-2 (Cadmium, Chromium, Cobalt, Copper, Lead, Vanadium, Zinc) and WT-3 (barium). Per the underdrain discharge management plan dated September 20, 2023 (**IDNR Doc #107723**), constituent concentrations measured in the WT-OF sample were compared to the intrawell upper prediction limits (UPL) of the constituents identified as SSIs in the individual discharge points [WT-1 (chromium, copper, lead, and vanadium), WT-2 (Cadmium, Chromium, Cobalt, Copper, Lead, Vanadium, Zinc) and WT-3 (barium)]. Each concentration measured in the WT-OF sample for the Spring 2025 Semiannual Compliance Monitoring Event was below the respective intrawell UPL for each constituent identified as an SSI at Monitoring Locations WT-1, WT-2, and WT-3.

The groundwater underdrain monitoring locations will continue to be monitored under the Detection Monitoring Program during the next Semiannual Compliance Monitoring Event.

Assessment Monitoring

During the Spring 2025 Monitoring Event, select groundwater monitoring wells were monitored under the Assessment Monitoring Program. Wells being monitored under the Assessment Monitoring Program are summarized on the attached **Table 1**. For the Spring 2025 Semiannual Compliance Monitoring Event, SSIs were identified in Monitoring Wells MW-18AR (barium, dichlorodifluoromethane, and tetrachloroethene) and MW-200A (barium). These SSIs have previously been detected at the Landfill in these monitoring wells. Confidence interval analysis for these SSIs did not indicate that these constituent concentrations exceeded a groundwater protection standard (GWPS) at a statistically significant level (SSL) for the Spring 2025 Semiannual Compliance Monitoring Event.

The monitoring wells monitored under the Assessment Monitoring Program during the Spring 2025 Semiannual Compliance Monitoring Event will continue to be monitored under the Assessment Monitoring Program during the next Semiannual Compliance Monitoring Event.

AZPOC Monitoring Locations

During the Spring 2025 Monitoring Event, Attenuation Zone Point of Compliance (AZPOC) monitoring locations were monitored under the Assessment Monitoring Program. For the Spring 2025 Semiannual Compliance Monitoring Event, no potential SSIs were identified for a monitored constituent at these Monitoring Wells.

The AZPOC monitoring wells are proposed to continue to be monitored under the Assessment Monitoring Program during the next Semiannual Compliance Monitoring Event. As indicated in the 2024 Spring Sampling Notification dated June 25, 2024 (**IDNR Doc #110314**), a discussion summarized that the corrective remedy has satisfied the remedy completion requirements of IAC 113.10(9)"e"(1) and (2), and it was requested that IDNR communicate what actions may be required in accordance with IAC 113.10(9)"e"(3) to complete the remedy. If IDNR concurs with the summary in the spring notification, the City requests guidance on the next steps on continued corrective action monitoring in regard to the AZPOC monitoring wells.

Corrective Action Monitoring

During the Spring 2025 Monitoring Event, corrective action bracketing wells were used to evaluate the horizontal and vertical extent of groundwater impact and to assess changes. For the Spring 2025 Semiannual Compliance Monitoring Event, arsenic at Bracketing Well MW-409 was the only constituent detected above the GWPS.

In a letter dated November 13, 2024 (**IDNR Doc #111328**), HDR recommended that Monitoring Well MW-18A-07 transition from a bracketing well to a source characterization monitoring well. IDNR concurred with this transition in a revised operating permit dated December 2, 2024 (**IDNR Doc #111413**). Beginning with this Spring 2025 Semiannual Compliance Monitoring Event, MW-18A-07 is being monitored in accordance with the Source Characterization Monitoring Program.

During the Spring 2025 Monitoring Event, source characterization monitoring wells were monitored for trends in monitored constituents and changes in natural attenuation parameters (total organic carbon [TOC], nitrate as nitrogen, iron, manganese, and sulfate) to evaluate if groundwater impact was increasing or decreasing based on the selected corrective action remedy.

For the Spring 2025 Semiannual Compliance Monitoring Event, statistically significant increasing trends were identified for the following well-constituent pairs:

- cis-1,2-dichloroethene: MW-18A-07
- Nickel: MW-209B
- Sulfide: MW-209B

For the Spring 2025 Semiannual Compliance Monitoring Event, statistically significant decreasing trends were identified for the following well-constituent pairs:

- Barium: MW-206A
- Cadmium in MW-2A-97
- Dichlorodifluoromethane: MW-16A
- 1,1-dichloroethane: MW-206A.

Based on the natural attenuation parameters, changes in groundwater chemistry at the source characterization monitoring wells appear to indicate that impact is being reduced and groundwater quality is improving. The only exceptions would be Monitoring Wells MW-207A and MW-211B. Recent iron and manganese concentrations at Monitoring Wells MW-207A and MW-211B have been elevated when compared to historical values. Further sampling data will be needed to confirm if the organic plume is shifting near Monitoring Wells MW-207A and MW-211B and would further degrade groundwater quality.

Conclusion and Recommendations

The following conclusions are made and actions recommended for the continuation of groundwater compliance monitoring at the Landfill:

1. A majority of the groundwater impact is present in monitoring wells adjacent to the Non-Subtitle D Areas (Northern and Eastern Unlined/Clay-Lined Cells) of the Landfill. The sources of impact have been previously identified. Some areas are being influenced by leachate migration while landfill gas migration is the primary source of impact in other areas.
2. The corrective action remedy of source control via leachate and landfill gas management systems along with monitored natural attenuation has been implemented at the Landfill.
3. AZPOC monitoring wells are being utilized to monitor progress of the corrective action remedy. As indicated in the 2024 Spring Sampling Notification dated June 25, 2024 (**IDNR Doc #110314**), it was discussed that sufficient data has been obtained to indicate the corrective action remedy goals have been met. The city is requesting IDNR's response to the summary and recommended next steps, if any.
4. Evaluation of the natural attenuation parameters indicates that natural attenuation processes are occurring in the groundwater adjacent to the Landfill. However, further assessment would be needed at Monitoring Wells MW-207A and MW-211B since recent parameter concentrations indicate groundwater impact may be increasing.
5. Continue collecting water level and well depth measurements, if scheduled, on a semiannual basis at each HMSP approved monitoring location.
6. Conduct groundwater monitoring at each HMSP approved monitoring location under the respective monitoring program as summarized on **Table 1** and **Table 2**.

Certification page (PE or ground water scientist signature) ***113.10(1)"d"***

For the purposes of this rule, a "qualified groundwater scientist" means a scientist or an engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields demonstrated by state registration, professional certifications, or completion of accredited university programs that enable that individual to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.

1 Purpose

This 2025 Spring Statistical Analysis Report summarizes groundwater monitoring activities, associated data, and statistical analyses that were prepared by HDR Engineering, Inc. (HDR), on behalf of the City of Iowa City (City) for the City of Iowa City Sanitary Landfill (Landfill) for the Spring 2025 Semiannual Groundwater Monitoring Event. These activities were conducted in general accordance with the Iowa Administrative Code (IAC) 567 Chapter 113.10, and the additional Iowa Department of Natural Resources (IDNR) requirements specified in the Landfill's solid waste disposal permit number 52-SDP-01-72P, subsequent permit amendments, and the most recently approved Hydrologic Monitoring System Plan (HMSP).

2 Site Background

The City's Landfill and Recycling Center is located at 3900 Hebl Avenue Southwest, Iowa City, Iowa 52246. The Municipal Solid Waste Landfill (MSWLF) area is legally described as being located in the SE ¼; most of the E ½ and NW ¼ of the SW ¼; most of the SW ¼ of the NE ¼; the S ½ of the SE ¼ of the NE ¼; and 80 rod by 6 rod parcel off the S side of the SE ¼ of the NW ¼; all in Section 14, Township 79 North, Range 7 West, Johnson County, Iowa.

The MSWLF began receiving waste in 1972. Initial filling began in the north-central portion of the property. Construction of additional cells progressed to the south along the east side of the property and then northward along the west side of the existing MSWLF cells. Approximately 66.2 acres of the MSWLF are closed, and approximately 71.6 acres are currently active in various stages of service or fill. Cell Fiscal Year (FY) 09 was destroyed by fire in June 2012; a truncated portion of Cell FY09 was rebuilt and reopened in the fall of 2013. Cell FY18 was constructed in the summer of 2018 and is approximately 7.2 acres. Cell FY23 was constructed in 2023 and is approximately 11.0 acres. A site map depicting the characteristics of the MSWLF and surrounding vicinity is provided as **Figure 1**.

All active cells (Cells FY95, FY96, FY98, FY02, FY06, FY09, FY18, and FY23) were constructed with leachate drainage layers and collections systems. Pre-1991 cells have toe drains installed along the downgradient perimeters of those cells.

2.1 Site Status and Applicable Rules

The Landfill provides routine solid waste disposal services for generators in the permitted service area, which includes: all cities and unincorporated areas in Johnson County, Iowa and the cities of Kalona and Riverside in Washington County, Iowa.

2.2 Site Geology

Hydrogeologic investigations have been completed at the Landfill. A detailed description of the site's geology and hydrogeology is included in the *Soil and Hydrogeologic Investigation – Proposed Expansion Area, Iowa City Landfill and Recycling Center* dated August 2008 (Howard R. Green Company, **IDNR Doc #30283**). A summary of the Landfill's geology based on the August 2008 report is included in the following subsections.

2.2.1 Surficial Geology

The Landfill's ground surface elevation varies from 690 feet above mean sea level (AMSL) near the stream in the southeast corner of the facility to 785 feet in the northwest corner of the facility. Surficial deposits include loess, alluvium, glacial till, and glaciofluvial sand deposits. Bulk thickness of the surficial deposits is a function of the underlying bedrock topography and varies from about 90 feet thick in the southern portion of the site near the stream to about 140 feet thick in the north-central area near cell FY72.

Loess varies in thickness from five (5) to 20 feet. Generally present in upland areas of the site and non-existent in lowland alluvial areas.

Alluvium is present along the north-south stream valleys located along the east and west sides of the Landfill Property. The confluence for these unnamed stream segments is approximately 0.25 miles south of the Landfill Property. Surface water flow in these unnamed stream segments eventually discharge into Old Man's Creek at a confluence approximately 2.25 miles south of the Landfill Property. The alluvium is generally silt, clay, and silty clay, with thin interbedded silty sand and sand layers. Alluvium thickness increases when moving from north to south along the general surface water flow path of the unnamed stream segments.

Glacial till is present under the alluvial and loess deposits in the area. The glacial till is dominated by clay sediments with thin, discontinuous sand lenses. Weathered till is present in the upper portion of the formation and overlies unweathered till. Weathered till is generally lighter brown or gray color with mottling that is interpreted as oxidation from moving water through the material. Unweathered till is very stiff with a darker gray color and no evidence of oxidation.

Glaciofluvial sand is an intra-till unit which is glacial outwash deposits. The layer, identified as Sand Unit B, is continuous across the site. Sand Unit B is confined by the unweathered till and its thickness is variable due to its outwash origin.

Previous landfill activities and infrastructure have affected surficial geology and hydrogeology at the facility. Specifically, where the construction of landfill cells has penetrated, to varying degrees, into the loess or weathered till, the local groundwater surface flow pattern is modified, and lateral continuity of the surficial deposits is disrupted.

2.2.2 Bedrock Geology

The uppermost bedrock at the Landfill is gray, weathered limestone of the Devonian-age Cedar Valley Formation. Depth to bedrock varies from approximately 90 to 140 feet below ground surface. The erosion slope of the bedrock indicates higher bedrock surface elevation in the north (~630 feet AMSL) to a lower elevation in the south (~590 feet AMSL)

2.3 Site Hydrology

The major hydrogeologic units and corresponding order-of-magnitude horizontal hydraulic conductivity (K_h) are the following:

- Loess and weathered glacial till: 10^{-4} centimeters per second (cm/sec),
- Alluvium: 10^{-4} cm/sec,
- Intra-till Sand Unit B: 10^{-3} cm/sec,

- Unweathered glacial till: 10^{-5} cm/sec,
- Limestone Bedrock: 10^{-4} cm/sec.

The water table aquifer traverses loess, weathered till, and alluvium at the Landfill and is considered the uppermost aquifer. Sand Unit B forms the uppermost continuous aquifer across the site. The groundwater in Sand Unit B is confined by unweathered till which provides upper and lower confining units to the glacial outwash aquifer. The limestone bedrock is a regional aquifer.

The uppermost aquifer (water table aquifer) is represented by the A-series wells screened in loess and/or weathered till and the B-series wells screened in alluvium. The confined, continuous aquifer in the glacial outwash, Sand Unit B, is represented by the C-series wells. The confining unweathered till units are represented by the D-series wells (except for MW-17D and MW-18D1 which are screened in weathered till). The Devonian-age limestone bedrock aquifer is represented by the E-series wells.

2.3.1 Horizontal Groundwater Flow

Local and intermediate groundwater flow systems control groundwater movement at the Landfill. Based on groundwater flow evaluations, horizontal groundwater flow is higher relative to vertical groundwater flow due to the low permeability of the unweathered till. Due to the presence of the unweathered till, the uppermost water table aquifer, the confined Sand Unit B aquifer, and bedrock aquifer are hydrologically distinct units, but are not completely isolated from each other.

The unconfined, water table aquifer groundwater flow is generally from the north-northwest and into the adjacent stream valleys on the east-southeast and west-southwest sides of the Landfill. Groundwater flow in the confined, Sand Unit B, aquifer is generally from the north to south. Groundwater flow in the bedrock aquifer is generally from the south-southeast to the north-northwest, but with a relatively flat gradient.

3 Monitoring Network and Sampling Procedures

3.1 Monitoring Network

The HMSP monitoring locations for the site are summarized on the attached **Table 1**. The HMSP monitoring network includes upgradient/background and downgradient monitoring wells for the water table aquifer (A-series and B-series monitored formations) and groundwater underdrain/tile line monitoring locations. With the implementation of the Corrective Action Groundwater Monitoring Program (CAMP) [approved September 2, 2021], the Attenuation Zone Point of Compliance (AZPOC) Monitoring Wells and Source Characterization Monitoring Wells were established. **Table 1** summarizes the current monitoring program for each monitoring point. **Table 2** provides the monitoring program implementation plan and sampling schedule for the HMSP and CAMP monitoring networks.

The 2025 Spring Semiannual detection, assessment, and corrective action monitoring were conducted at the groundwater monitoring locations on April 23 to May 9, 2025. Details regarding the statistical analysis of this monitoring event are summarized in **Appendix A.** The

monitoring locations sampled during the monitoring event and the constituents analyzed for are summarized in **Table 2**. During the Spring 2025 Semiannual Compliance Sampling Event, each monitoring location was sampled except for groundwater underdrain ST-1. Field personnel indicated the monitoring location ST-1 was not discharging during the sampling event.

Completed field sampling forms are included in **Appendix B** and the laboratory analytical reports are provided in **Appendix C** for the Spring 2025 Semiannual Compliance Monitoring Event. Historical groundwater data is provided in **Appendix D**.

3.2 Sampling Procedures

City of Iowa City personnel conducted the groundwater sampling activities during the Spring 2025 Semiannual Compliance Monitoring Event. A water level indicator was used to measure the static water level in each of the monitoring wells prior to purging and sampling. Static water levels in site monitoring wells were used to determine the groundwater elevation during the Spring 2025 Semiannual Compliance Monitoring Event and are shown in the attached **Figure 2**. During the Spring 2025 Semiannual Compliance Monitoring Event, groundwater elevations at the site's monitoring wells ranged from 688.30 (MW-1A) to 762.13 (MW-18A-07) feet AMSL. Groundwater flow direction is generally from the north-northwest with diversions into the adjacent stream valleys on the east-southeast and west-southwest sides of the Landfill.

In addition to measuring depth to groundwater (static water level) during the sampling event, field parameters were measured to verify and document the presence of a stable and representative sample medium prior to collection. A multi-parameter meter with flow cell was used to evaluate geochemical measurements including temperature, conductivity, dissolved oxygen (DO), and pH of purged groundwater prior to sampling. Geochemical measurements for the Spring 2025 Semiannual Compliance Monitoring Event were recorded on the field sampling forms and are provided in **Appendix B**. Current well conditions including casing degradation, collision, or vandalism are provided on the sampling forms. Well maintenance items were noted during the Spring 2025 Semiannual Compliance Monitoring Event for Monitoring Wells MW-31B, MW-207A, MW-215A, and MW-216A. Field personnel indicated the hinges on the well head protectors for Monitoring Wells MW-31B, MW-215A, and MW-216A either require maintenance or replacement, and the well casing needs to be cut down at Monitoring Well MW-207A for the well head protector lid to close completely. These maintenance items were addressed and completed on July 31, 2025. The new top of casing elevation for monitoring well MW-207A is 717.35 feet AMSL.

Groundwater samples were collected using either a dedicated submersible pump or peristaltic pump at each monitoring well, except for Monitoring Well MW-31B and MW-215A. A Waterra foot valve sampling device was used to collect a groundwater sample from Monitoring Wells MW-31B and MW-215A. Groundwater samples from groundwater underdrains were collected as grab samples using a clean laboratory container to collect the sample from the discharge, if flowing.

4 Data Evaluation and Summary

Statistical analyses were completed using Sanitas™ (Sanitas Technologies) software. The following sections describe the statistical methodology used for each monitoring program. Additional information on specific statistical equations used in the Sanitas™ program can be provided under separate cover upon request. Note that J-flagged concentrations [concentration between the method detection limit (MDL) and reporting limit (RL)] are not considered statistically significant.

Prior to statistical analysis, the groundwater data for each sampling and analysis event was reviewed for outliers and trends. The review included evaluations using time series plots, box-whiskers plots, Sen's Slope/Mann-Kendall trend tests, and outlier screening. If the data is determined to be an outlier, the data point may be replaced with a corrected value, discarded from statistical calculations, or left "as is" in the database. Detected outliers for well/constituent pairs are provided in the outlier summary in **Appendix A.**

A monitoring program summary (**Table 1**) provides a detailed summary of the monitoring wells and current monitoring program. The most recent and upcoming sampling schedule is provided in **Table 2**. The monitoring well maintenance schedule (**Table 3**) and performance summaries (**Table 4**) are provided as attachments to this report. A database of historical groundwater data collected at the Landfill from monitoring wells and groundwater underdrains are provided in **Table 9A** and **Table 9B**, respectively, which are included in **Appendix D**. Historic statistically significant increases (SSIs) and statistically significant levels (SSLs) are summarized on **Table 10**.

4.1 Detection Monitoring

Under the Detection Monitoring Program of the IAC 567 113.10(5), Appendix I monitoring results are statistically compared to background levels as given in IAC 113.10(6)"*e*". The background data set for the HMSP monitoring wells which includes concentrations measured in background/up-gradient Monitoring Wells MW-34A, MW-38A, and MW-39B is used to evaluate SSIs for inorganic constituents by comparison to the interwell upper prediction limit (UPL). The detection monitoring statistical evaluations for the groundwater underdrain monitoring points (ST-1, WT-1, WT-2, WT-3, and WT-4) in the HMSP monitoring network utilize an intrawell UPL for evaluating SSIs for inorganic constituents. A summary of background levels calculated for inorganic constituents detected above laboratory RLs in the HMSP monitoring wells and groundwater underdrains are summarized on the attached **Table 5**.

A "1-of-2" retesting plan is used on individual sample results. The 1-of-2 retesting plan as defined in the Environmental Protection Agency's (EPA) Unified Guidance concludes that an SSI has occurred when 2 out of 2 consecutive sample results exceed the UPL, while no SSI is concluded if 1-of-2 is below the limit. The UPL for each constituent is recalculated semiannually. If an SSI above the UPL is identified, the monitoring location would be required to enter the Assessment Monitoring Program, unless an alternative source demonstration (ASD) successfully demonstrates a source other than the landfill caused the SSI.

For interwell constituents with greater than or equal to 50% non-detects in the background data set, a non-parametric prediction limit is used. The non-parametric prediction limit is taken as the maximum order statistic (maximum value) of the background data. For interwell constituents with less than 50% non-detects in the background data set, normality assumptions are verified using the Shapiro-Wilk Normality Test. If the background data is not normally distributed, a non-parametric prediction limit is used. If the background data is normally distributed or can be fit to a normal distribution using a normalizing transformation, then a normal-based parametric prediction limit is applied.

For organic constituents without historical detections in the background datasets for the monitoring wells and groundwater underdrains, the Double Quantification Rule (DQR) analysis is used. This method states that detection of the same constituent in two consecutive sampling events in the same monitoring point indicates an SSI, and the monitoring point must be placed into the Assessment Monitoring Program. This evaluation is conducted in a rolling manner using single observations from the semiannual and resample events, as necessary. For newly detected constituents, the resample event will be completed within 90 days of the original exceedance as stated in the IDNR memo for Double Quantification Rule Resampling dated June 22, 2017.

During the Spring 2025 Semiannual Compliance Monitoring Event, there were no HMSP monitoring wells managed under the Detection Monitoring Program. The groundwater underdrains (ST-1, WT-1, WT-2, WT-3, and WT-4) were monitored under the Detection Monitoring Program for the Spring 2025 Semiannual Compliance Monitoring Event. Results of the most recent sampling event for monitoring locations managed under the Detection Monitoring Program are summarized in **Table 6**. During the Spring 2025 Semiannual Compliance Monitoring Event, SSIs were identified in groundwater underdrains WT-1 (chromium, copper, lead, and vanadium), WT-2 (Cadmium, Chromium, Cobalt, Copper, Lead, Vanadium, Zinc) and WT-3 (barium,). The Sanitas™ statistical reports are included in **Appendix A**.

As approved in correspondence dated September 20, 2023 (**IDNR Doc #107723**), a site-specific underdrain discharge management plan was developed which includes the following aspects:

- The individual discharge points WT-1, WT-2, WT-3, and WT-4 are currently evaluated semiannually by intrawell prediction limits. Once sufficient background has been collected for combined outfall monitoring point WT-OF, intrawell prediction limits will be calculated from WT-OF data in addition to the individual discharge points.
- If an SSI is indicated for WT-1, WT-2, WT-3, and/or WT-4 before sufficient background has been collected for WT-OF, the indicated SSI will not require verification. If an SSI is indicated in an individual discharge point, analytical results from WT-OF will be compared to the prediction limits of the individual discharge point-constituent pairs to determine appropriate actions.

- Once sufficient data is available to perform statistical evaluation for WT-OF, SSIs indicated in the individual monitoring points will not trigger additional action if the concentrations in WT-OF are below its respective intrawell prediction limits.
- If an SSI is identified at monitoring point WT-OF, verification sampling will occur. If the SSI is confirmed, appropriate management of the discharge will be evaluated and implemented after IDNR concurrence.

Since sufficient background data has not been collected at monitoring location WT-OF, constituent concentrations measured in the WT-OF sample were compared to the intrawell UPLs of the constituents identified as SSIs in the individual discharge points [WT-1 (chromium, copper, lead, and vanadium), WT-2 (Cadmium, Chromium, Cobalt, Copper, Lead, Vanadium, Zinc) and WT-3 (barium)]. Each concentration measured in the WT-OF sample was below the respective intrawell UPL for each constituent identified as an SSI at monitoring locations WT-1, WT-2, and WT-3.

The groundwater underdrain monitoring locations will continue to be monitored under the Detection Monitoring Program.

4.2 Assessment Monitoring

Under the Assessment Monitoring Program of IAC 113.10(6), Appendix I and II monitoring results are statistically compared to UPLs as given in IAC 113.10(6)“*e*” and to the groundwater protection standard (GWPS) as given in IAC 113.10(6)“*g*” and “*h*”. Interwell prediction limits are used to statistically evaluate SSIs over background for the Appendix I and II constituents with historical detections in the background dataset, and the DQR method is used for organic constituents to evaluate SSIs, as previously discussed in **Section 4.1**.

Constituents at monitoring locations which have been determined to be statistically above the UPL are also statistically compared to the GWPS to identify SSLs. The GWPS is the Iowa Statewide Standard (SS) for a Protected Groundwater Source (Statewide Standard). If no SS exists, or if the UPL concentrations are higher than the SS, the GWPS is defined as the UPL concentration. Per IAC 113.10(6)“*i*”, an alternative GWPS may be established by IDNR for constituents for which there is no SS or EPA maximum contaminant level (MCL). Confidence Intervals (CIs) are used as the statistical strategy in assessment monitoring. In the case of normally distributed data, a normal-based parametric CI is used. If the data are not normally distributed, a non-parametric CI on the median is used.

According to IAC 113.10(6)“*e*”, a well may return from assessment monitoring to detection monitoring when all Appendix II constituents are “shown to be at or below background values, using the statistical procedures in paragraph 113.10(4)“*g*” for two consecutive sampling events.” Assessment monitoring continues when Appendix II concentrations are above background values but below the GWPS using the statistical procedures in §113.10(4)“*g*”.

If constituents are detected at SSLs above the GWPS, a notice is placed in the operating record and the monitoring location would be required to enter the Corrective Action Monitoring Program. At that time, requirements to initiate characterization of the nature and extent of the

release (IAC 113.10(6)“*g*”) are triggered, and the owner or operator is required to initiate an assessment of corrective measures and select and implement a remedy in accordance with IAC 113.10(7), (8), and (9).

Results of the most recent sampling event for monitoring locations in the Assessment Monitoring Program are provided in **Table 7**. The Sanitas™ statistical reports are included in **Appendix A**. For the Spring 2025 Semiannual Compliance Monitoring Event, SSIs were identified for Monitoring Wells MW-18AR (barium, dichlorodifluoromethane, and tetrachloroethene) and MW-200A (barium). The SSIs identified during the Spring 2025 Semiannual Compliance Monitoring Event at Monitoring Wells MW-18AR and MW-200A have historically been detected at these monitoring wells. The CIs for the well-constituent pairs identified as SSIs were compared to their respective GWPS. Based on the statistical analysis, an SSL was not identified during the Spring 2025 Semiannual Compliance Monitoring Event (**Table 8**).

The monitoring wells monitored under the Assessment Monitoring Program during the Spring 2025 Semiannual Compliance Monitoring Event will continue to be monitored under the Assessment Monitoring Program during the next Semiannual Compliance Monitoring Event.

4.3 AZPOC Monitoring Locations

The AZPOC monitoring locations are monitored under the Assessment Monitoring Program and follow the same statistical assessment procedures as described in **Section 4.2**. Results of the most recent sampling event for the AZPOC monitoring locations are provided in **Table 7**. The Sanitas™ statistical reports are included in **Appendix A**. For the Spring 2025 Semiannual Compliance Monitoring Event, no potential SSIs were identified.

The AZPOC monitoring wells are proposed to continue to be monitored under the Assessment Monitoring Program during the next Semiannual Compliance Monitoring Event. As indicated in the 2024 Spring Sampling Notification dated June 25, 2024 (**IDNR Doc #110314**), a discussion summarized that the corrective remedy had satisfied the remedy completion requirements of IAC 113.10(9)”e”(1) and (2), and it was requested that IDNR communicate what actions may be required in accordance with IAC 113.10(9)”e”(3) to complete the remedy. If IDNR concurs with the summary in the spring notification, the city requests guidance on the next steps on continued corrective action monitoring in regard to the AZPOC monitoring wells.

4.4 Corrective Action Monitoring Activities and Evaluation

4.4.1 Corrective Action/Bracketing Wells

Bracketing monitoring wells, as required in the CAMP, are used to define the horizontal and vertical extent of groundwater impact and assess changes in the extent of impact. The monitoring wells used for bracketing are summarized on **Table 1**. The constituents detected above laboratory MDLs during the Spring 2025 Semiannual Compliance Monitoring Event are summarized in **Table 11**. For the Spring 2025 Semiannual Compliance Monitoring Event, arsenic was detected above its GWPS at Monitoring Well MW-409.

4.4.2 Source Characterization Monitoring Wells

Source characterization monitoring wells are not compliance monitoring points. These are monitoring wells that were previously identified as having GWPS exceedances at SSLs. As a component of the CAMP, these monitoring wells were replaced by AZPOC monitoring points for compliance purposes. The monitoring wells used for source characterization are summarized on **Table 1**. The source characterization monitoring wells are sampled for the Appendix I and TSS constituents on a semiannual basis and natural attenuation parameters (total organic carbon [TOC], nitrate as nitrogen, iron, manganese, and sulfate) on an annual basis. During the Spring 2025 Semiannual Compliance Monitoring Event, the full Appendix II constituent list was monitored at each Source Characterization Monitoring Well except for MW-211B. The Appendix I, Appendix II, and TSS constituents detected above laboratory MDLs during the Spring 2025 Semiannual Compliance Monitoring Event are summarized on **Table 12** along with the calculated trends for the eight (8) most recent samples.

In a letter dated November 13, 2024 (**IDNR Doc #111328**), HDR recommended that Monitoring Well MW-18A-07 transition from a bracketing well to a source characterization monitoring well. IDNR concurred with this transition in a revised operating permit dated December 2, 2024 (**IDNR Doc #111413**). Beginning with this Spring 2025 Semiannual Compliance Monitoring Event, MW-18A-07 is monitored in accordance with the Source Characterization Monitoring Program.

For the Spring 2025 Semiannual Compliance Monitoring Event, statistically significant increasing trends were identified for the following well-constituent pairs:

- cis-1,2-dichloroethene: MW-18A-07
- Nickel: MW-209B
- Sulfide: MW-209B

For the Spring 2025 Semiannual Compliance Monitoring Event, statistically significant decreasing trends were identified for the following well-constituent pairs:

- Barium: MW-206A
- Cadmium in MW-2A-97
- Dichlorodifluoromethane: MW-16A
- 1,1-dichloroethane: MW-206A.

The parameters, TOC, nitrate as nitrogen, iron, manganese, and sulfate, are utilized to evaluate if natural attenuation is facilitating the reduction of contaminants of concern at the source characterization monitoring wells. TOC is utilized as a measure of organic carbon present in the groundwater samples which is an indicator for released constituents from the Landfill. Nitrate as nitrogen, iron, manganese, and sulfate are electron acceptors that are utilized in oxidation-reduction processes in groundwater. The concentration of these electron acceptors can indicate the state of the groundwater and whether groundwater is in a more oxidizing state or reducing state. The order of usage in terms of energy provided would be nitrate as nitrogen, manganese, iron, and sulfate or another way of interpreting it is from more oxidizing conditions to more reducing conditions. If reducing conditions develop as a result of elevated organic

carbon, iron and manganese concentrations will increase in groundwater due to the presence of more reduced, soluble forms of these constituents, while nitrate as nitrogen and sulfate concentrations would be decreased. If oxidizing conditions develop as a result of organic carbon reductions, then iron and manganese concentrations should decrease in groundwater with the potential of nitrate as nitrogen and sulfate concentrations increase. Groundwater analytical results for the natural attenuation parameters are summarized on **Table 13**. Time series graphs for TOC (**Graph 1**), nitrate as nitrogen (**Graph 2**), iron (**Graph 3**), manganese (**Graph 4**), and sulfate (**Graph 5**) are attached to this report and depict the concentrations measured in the source characterization monitoring wells since 2015. The graphs also include a visual representation of the range of concentrations measured in groundwater samples collected from background Monitoring Wells MW-34A, MW-38A, and MW-39B. This visual representation provides a reference point when comparing source characterization monitoring well data.

Based on the natural attenuation parameters, changes in groundwater chemistry at the source characterization monitoring wells appear to be indicating that impact is being reduced and groundwater quality is improving. The only exceptions would be Monitoring Wells MW-207A and MW-211B. Recent iron and manganese concentrations at Monitoring Wells MW-207A and MW-211B have been elevated when compared to historical values. Further sampling data, which is collected during the periodic monitoring events, will be needed to confirm if the organic plume is shifting near Monitoring Wells MW-207A and MW-211B and would further degrade groundwater quality.

Further discussion of each natural attenuation parameter is included in the following subsequent sections.

4.4.2.1 TOTAL ORGANIC CARBON

Background TOC concentrations measured in groundwater samples from Monitoring Wells MW-34A, MW-38A, and MW-39B range from less than laboratory RLs (<1.00 milligrams per liter [mg/L]) to 1.17 mg/L. To date, TOC concentrations at source characterization monitoring wells are above these background values. Monitoring Wells MW-16A and MW-206A have TOC concentrations that are the closest to the background values. The highest TOC concentrations have been measured in Monitoring Wells MW-209B and MW-212A. The highest TOC concentrations measured in the source characterization monitoring wells are from Monitoring Well MW-209B (73.7 mg/L – 4/6/2015 and 70.6 – 10/20/2021). However, in recent sampling events, TOC concentrations at Monitoring Well MW-209B have reduced significantly recently with the Spring 2025 Monitoring Event value being 19.1 mg/L.

4.4.2.2 NITRATE AS NITROGEN

Background nitrate as nitrogen concentrations measured in groundwater samples from Monitoring Wells MW-34A, MW-38A, and MW-39B range from less than laboratory RLs (<0.1 mg/L) to 9.89 mg/L. The highest nitrate as nitrogen concentrations in background monitoring wells were measured in groundwater samples collected from MW-38A (8.47 to 9.89 mg/L). Nitrate as nitrogen at Monitoring Well MW-38A could be influenced by agricultural inputs of nitrogen. To date, nitrate as nitrogen concentrations at source characterization monitoring wells have ranged from <0.100 mg/L to 2.10 mg/L. For Monitoring Wells MW-1A, MW-2A-97,

MW-212A, nitrate as nitrogen concentration increased sharply in 2016, but decreased and have been below 0.4 mg/L for the past four years. For Monitoring Wells MW-206A and MW-209B, nitrate as nitrogen concentrations were relatively low in 2015 through 2016 with recent concentrations (2021 through 2024) being elevated. The Spring 2025 nitrate as nitrogen concentration at Monitoring Well MW-206A was below laboratory reporting limits (0.200 mg/L) which is a relatively steep decrease from the 2024 concentration of 2.10 mg/L. Further data is needed to see if this decrease is related to the increase of TOC at monitoring well MW-206A. The nitrate as nitrogen data is indicating mixed results for improved groundwater quality at the source area of the site. This may indicate variability in the groundwater's oxidation state and organic carbon in the plume.

4.4.2.3 IRON

Background iron concentrations measured in groundwater samples from Monitoring Wells MW-34A, MW-38A, and MW-39B range from less than laboratory RLs (<0.1 mg/L) to 0.852 mg/L with one potential outlier at a concentration of 8.22 mg/L. To date, iron concentrations at source characterization monitoring wells have ranged from <0.100 mg/L to 207 mg/L. Monitoring wells MW-16A and MW-206A have iron concentrations that are the closest to the background values. As depicted in **Graph 3**, elevated iron concentrations were measured in Monitoring Wells MW-6B and MW-212A in 2015 but have decreased significantly to the most recent concentrations measured in 2025. This may be indicative of lesser groundwater impact at these monitoring locations. For Monitoring Well MW-211B, recent concentrations are elevated when compared to concentrations measured in 2015 and 2016. Monitoring Wells MW-207A and MW-211B had the most noticeable increases when compared to historical data. The 2025 iron analytical result at Monitoring Well MW-211B is the highest recorded in the Source Characterization Monitoring Wells at a concentration of 207 mg/L. The 2025 iron analytical result at Monitoring Well MW-207A increased to 136 mg/L. Each iron concentration reported at Monitoring Well MW-207A prior to the Spring 2025 Monitoring Event has been less than 32.5 mg/L The elevated concentrations of iron indicate reducing conditions are increasing and could be the result of elevated organic concentrations in groundwater upgradient of monitoring wells MW-207A and MW-211B. Based on these indicators, natural attenuation does not appear to be improving groundwater quality in the area of MW-207A and MW-211B at the time of the Spring 2025 Semiannual Compliance Monitoring Event.

4.4.2.4 MANGANESE

Background manganese concentrations measured in groundwater samples from Monitoring Wells MW-34A, MW-38A, and MW-39B range from less than laboratory RLs (<0.01 mg/L) to 0.323 mg/L with one potential outlier at a concentration of 1.54 mg/L. To date, manganese concentrations at source characterization monitoring wells have ranged from <0.00500 mg/L to 43.4 mg/L. Monitoring Wells MW-16A and MW-206A have manganese concentrations that are the comparable to the background values. As depicted in **Graph 4**, elevated manganese concentrations were measured in Monitoring Wells MW-6B and MW-212A in 2015 but have decreased significantly to the most recent concentrations measured in 2025. This may be indicative of lesser groundwater impact at these monitoring locations. For Monitoring Well MW-211B, recent concentrations are elevated when compared to concentrations measured in 2015 and 2016. MW-211B had the most noticeable increase when compared to historical data

and the highest measured manganese concentration (43.4 mg/L) in the Source Characterization Monitoring Wells. In addition, a relatively large increase in manganese concentration occurred during the Spring 2025 Monitoring Event at Monitoring Well MW-207A (6.64 mg/L) when compared to previous concentrations that were all below 1.41 mg/L. These increases follow a similar increase in iron at Monitoring Wells MW-207A and MW-211B and may be indicative of a shifting organic plume near these monitoring wells. The elevated concentrations of manganese indicate reducing conditions are increasing and could be the result of elevated organic concentrations in groundwater upgradient of monitoring wells MW-207A and MW-211B. Based on these indicators, natural attenuation does not appear to be improving groundwater quality in the area of MW-207A and MW-211B at the time of the Spring 2025 Semiannual Compliance Monitoring Event.

4.4.2.5 SULFATE

Background sulfate concentrations measured in groundwater samples from Monitoring Wells MW-34A, MW-38A, and MW-39B range from 4.67 to 43.7 mg/L. To date, sulfate concentrations at source characterization monitoring wells have ranged from <1.00 mg/L to 789 mg/L. The lowest concentrations of sulfate have been consistently monitored at Monitoring Well MW-209B with each sample being below laboratory RLs except for the Spring 2025 Monitoring Event result which is 11.6 mg/L. MW-209B has consistently had the highest historical TOC and iron concentrations and lowest sulfate concentrations which may indicate the groundwater in this monitored area is in a carbon-dioxide reducing (methanogenic) state. A methanogenic state would indicate strong reducing conditions which implies limited electron acceptor constituents to naturally attenuate large concentrations of organic constituents. Thus, it may take a longer period of time for natural attenuation to reduce organic constituents in groundwater near Monitoring Well MW-209B. However, the lowest TOC measured at Monitoring Well MW-209B occurred during the Spring 2025 Monitoring Event at a concentration of 19.1 mg/L. This may be an early indication that natural attenuation may be effective in this area of the site.

For Monitoring Well MW-212A, the sulfate concentration spiked up in 2022 to a concentration of 789 mg/L. Since 2022, the sulfate concentration has decreased with the 2025 concentration being 373 mg/L. The sharp increase in sulfate concentration also coincided with a rapid reduction in TOC, iron, and manganese. There appeared to be a rapid infusion of sulfate into this area at concentrations that are well above background levels measured in Monitoring Wells MW-34A, MW-38A and MW-39B. During the 2024 monitoring event, sulfate concentration at Monitoring Well MW-1A also spiked up to a concentration of 460 mg/L. The sulfate concentration at Monitoring Well MW-1A decreased to 252 mg/L during the Spring 2025 Monitoring Event. Monitoring Well MW-1A is downgradient of Monitoring Well MW-212A and may indicate migration of elevated sulfate concentrations in the shallow groundwater.

For Monitoring Well MW-6B, the sulfate concentration increased to 309 mg/L during the Spring 2025 Monitoring Event. Historically, sulfate concentrations at MW-6B were below laboratory reporting limits (<1.00 mg/L) during the 2015 and 2016 sampling events. The recent measurements (2021 to 2025) appear to be steadily increasing. This may indicate that natural attenuation may be effective in this area of the site.

5 Quality Assurance/Quality Control

The quality assurance/quality control (QA/QC) protocols for each sampling event include proper sample containers, proper field protocols, and laboratory protocols. The QA/QC results for the Spring 2025 Semiannual Compliance Monitoring Event consisted of the following:

Spring 2025

- 2 Duplicates
- 14 Trip Blanks

Eurofins Environmental Testing North Central, LLC (Eurofins), in Cedar Falls, Iowa is responsible for providing QA/QC of laboratory protocols; this documentation is included in the Spring 2025 Semiannual Compliance Monitoring Event laboratory reports provided in **Appendix C**. The laboratory QA/QC protocols and documentation were reviewed by HDR. For the Spring 2025 Semiannual Compliance Monitoring Event, the laboratory sample receipt checklists indicated all samples were received within holding times, within acceptable temperatures, and sample containers were not broken or leaking except for sulfide analysis for Monitoring Wells MW-11B, MW-16A, MW-18A-07, and MW-206A. Eurofins analyze sulfide at their Chicago, Illinois laboratory. Based on the case narrative, the samples arrived at the Chicago laboratory outside holding time and with elevated sample temperatures that exceed analysis criteria for sulfide. Due to the hold time and temperature exceedances, sulfide is proposed to be resampled at monitoring wells MW-11B, MW-16A, MW-18A-07, and MW-206A during the Fall 2025 Semiannual Compliance Monitoring Event.

5.1 Laboratory Qualifiers

The following qualifiers were noted for some parameters in the Spring 2025 Semiannual Compliance Monitoring Event laboratory analytical reports:

- H : Sample was prepped or analyzed beyond the specified holding time.
    - Sulfide analyses of the groundwater samples for MW-11B, MW-18-07, MW-206A and MW-16A were conducted past the method holding time. The measured concentration for the Spring 2025 groundwater sample was comparable to sulfide concentrations in previous samples collected from these monitoring wells. The concentration result was not rejected; however, these monitoring wells will be resampled during the Fall 2025 Semiannual Compliance Monitoring Event for sulfide analysis.
- J : Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
- *- : Laboratory Control Sample (LCS) and/or Laboratory Control Sample Duplicate (LCSD) is outside acceptance limits, low biased.
- *1 : LCS/LCSD RPD exceeds control limits.
- F1 : Matrix Spike (MS) and/or Matrix Spike Duplicate (MSD) recovery exceeds control limits.

All results were noted by the laboratory as not triggering corrective action or requiring re-analysis except for sulfide analysis at Monitoring Wells MW-11B, MW-16A, MW-18-07, and MW-206A.

5.2 Trip Blanks

There were no detections above laboratory reporting limits of monitored constituents within the 14 trip blanks submitted for analysis for the Spring 2025 Semiannual Compliance Monitoring Event.

5.3 Field Duplicates

During the Spring 2025 compliance monitoring event, field duplicate sample one (DUP-1) was obtained from Monitoring Well MW-24A, and field duplicate sample two (DUP-2) was obtained from Monitoring Well MW-31B.

Field duplicate samples were analyzed to determine the relative percent difference (RPD) between the original (parent) sample and the duplicate sample. RPD values are only calculated for constituents detected above the laboratory RL for both the parent and duplicate sample. According to *Practical Guide for Ground-Water Sampling*: “Duplicate sample values which differ by less than ±50% relative difference indicates good error control.” (Barcelona et al, 1985).

Table 14 presents the parent/duplicate sample results along with the calculated RPD values for the Spring 2025 Semiannual Compliance Monitoring Event. Each RPD value is below the recommended 50% for each well-duplicate pair that had concentrations measured above laboratory RLs, except for lead in MW-31B. Some of the duplicate pairs had concentrations in the duplicate sample that were J-flagged, while the concentration in the parent sample was above the laboratory’s RLs. This included nickel for the MW-24A/DUP-1 duplicate pair and arsenic and vanadium for the MW-31B/DUP-2 duplicate pair. To further assess variability and evaluate the precision of the analysis for these duplicate pairs, a general industry standard for evaluating low concentration detections is to compare the absolute difference between the sample and duplicate value to two (2) times the laboratory RL. This comparison for nickel for the MW-24A/DUP-1 duplicate pair and arsenic, lead, and vanadium for the MW-31B/DUP-2 duplicate pair are provided on **Table 14**. The criteria was met for each of these constituents in the duplicate pairs.

Results of the quality assurance/quality control samples did not trigger corrective measures such as resampling or laboratory re-analysis.

6 Recommendations

The following conclusions are made and actions recommended for the continuation of groundwater compliance monitoring at the Landfill:

1. A majority of the groundwater impact is present in monitoring wells adjacent to the Non-Subtitle D Areas (Northern and Eastern Unlined/Clay-Lined Cells) of the Landfill. The sources of impact have been previously identified. Some areas are influenced by

leachate migration while landfill gas migration is the primary source of impact in other areas.

2. The corrective action remedy of source control via leachate and landfill gas management systems along with monitored natural attenuation has been implemented at the Landfill.
3. AZPOC monitoring wells are being utilized to monitor progress of the corrective action remedy. As indicated in the 2024 Spring Sampling Notification dated June 25, 2024 (**IDNR Doc #110314**), it was discussed that sufficient data has been obtained to indicate the corrective action remedy goals have been met. The city is requesting IDNR's response to the summary and recommended the next steps, if any.
4. Evaluation of the natural attenuation parameters indicates that natural attenuation processes are occurring in the groundwater adjacent to the Landfill. However, further assessment would be needed at Monitoring Wells MW-207A and MW-211B since recent parameter concentrations indicate groundwater impact may be increasing.
5. Continue collecting water level and well depth measurements, if scheduled, on a semiannual basis at each HMSP approved monitoring location.
6. Conduct groundwater monitoring and applicable statistical analysis at each HMSP approved monitoring location under the respective monitoring program as summarized on **Table 1** and **Table 2**.

MW-409	Silty Sand	CAMP Delineation	No Change	Not applicable	Not Applicable			9
MW-11D	Unknown	CAMP Delineation	No Change	Not applicable	Not Applicable			13
MW-404	Sandy Lean Clay	CAMP Delineation	No Change	Not applicable	Not Applicable			13

NOTES:

[1] Obtained from screened interval on boring logs or cross-sections.

[2] The Iowa Department of Natural Resources approved HDR's recommendation in a letter dated November 13, 2024, for monitoring well MW-18A-07 to move from a bracketing/delineation monitoring well to a source characterization well.

* A potential SSI was identified for the constituent. Confirmation of the SSI will be evaluated pending the results of a verification sampling event.

CAMP - Corrective Action Monitoring Plan

SSI - Statistically Significant Increase

SSL - Statistically Significant Level

MW-404	Tetrachloroethene, Trichloroethene, Vinyl Chloride		Tetrachloroethene, Trichloroethene, Vinyl Chloride	Tetrachloroethene, Trichloroethene, Vinyl Chloride	Tetrachloroethene, Trichloroethene, Vinyl Chloride	Not Applicable	Not Applicable

NOTES:
Metals List: Arsenic, Barium, Cobalt, Copper, Lead, Nickel.
Natural Attenuation Constituents: Total Organic Carbon, Nitrate as Nitrogen, Iron, Manganese, Sulfate.
TSS - Total Suspended Solids
* Due to holding time and temperature exceedances for the groundwater samples collected in the previous sampling event, sulfide will be analyzed during the monitoring event to confirm if the constituent is present above laboratory reporting limits.

Table 3
Monitoring Well Maintenance and Performance Reevaluation Schedule
2025 Spring Statistical Analysis Report
City of Iowa City Sanitary Landfill
Permit No. 52-SDP-01-72P

Compliance with:	2023	2024	2025	2026	2027
567 IAC 113.10(2)"f"(1): high and low water levels (biennial)		Completed		Scheduled	
567 IAC 113.10(2)"f"(2): changes in the hydrologic setting and flow paths	Completed	Completed	Completed	Scheduled	Scheduled
567 IAC 113.10(2)"f"(3): well depths	Completed	Completed	Completed	Scheduled	Scheduled
567 IAC 113.10(2)"f"(4): well recharge rates and chemistry (biennial)		Completed		Scheduled	
567 IAC 113.6(2)"i": Waste separation from ground water	Completed	Completed	Scheduled	Scheduled	Scheduled

COMMENTS:

● Spring 2025 semiannual groundwater elevations are shown in **Table 4**.

● Groundwater flow directions are consistent with historical groundwater flow data and measurements collected from the Site monitoring network. Flow directions for the Spring 2025 semiannual monitoring events are depicted in **Figure 2.**

● Monitoring well depths are shown on field sampling forms in **Appendix B** and **Table 4.** Each measured well depth conducted in Spring 2025 monitoring event is generally consistent with historical measured depths.

● Monitoring well recharge rates and chemistry are shown on field sampling forms in **Appendix B**.

COMMENTS:
Interwell prediction limits are calculated for the upgradient monitoring wells using pooled background data from MW-34A, MW-38A, and MW-39B for inorganic constituents. Background data is evaluated for potential trends and outliers prior to statistical analysis, as provided in **Appendix B**.

COMMENTS:
Intrawell prediction limits were calculated based on background data collected from groundwater underdrain WT-4 during the period from October 2017 through April 2021 for inorganic constituents.

NOTES:
BG - Background; Value is established from a site-specific background concentration.
GWPS - Groundwater Protection Standard
MCL - Maximum Contaminant Level; Value is established in the United States Environmental Protection Agency's National Primary Drinking Water Regulations
mg/L - milligrams per liter
SWS - Statewide Standard; Iowa Department of Natural Resources Statewide Standards for a Protected Groundwater Source

This page intentionally left blank.

	Nickel	mg/L	0.00475 J	0.04288
	TSS[(2)]	mg/L	3.25	N/A

NOTES:

BOLD - Result is above the respective interwell/intrawell prediction limit.

[(1)] The background database is being established for WT-OF, and background standards are not currently established for the monitoring point.

[(2)] TSS data is presented for additional information and is not compared to a background standard.

J - A laboratory flag for a constituent detected between the method detection limit (MDL) and the laboratory's reporting limit (RL). The concentrations are estimated values and are not considered statistically significant.

mg/L - milligrams per liter

N/A - Not Applicable

TSS - Total Suspended Solids

COMMENTS:

- This table reports only constituents with concentrations detected above the MDL at monitoring locations in the Detection Monitoring Program. The full list of constituents analyzed at these monitoring locations during the monitoring event is in the laboratory analytical reports included in **Appendix C**.

Table 7
Summary of Ongoing and Newly Identified SSIs in Assessment Monitoring
Spring 2025 Statistical Analysis Report
City of Iowa City Sanitary Landfill
Permit No. 52-SDP-01-72P

Well	Constituent	Units	Most Recent Result Spring 2025	Background Standard	LCL	GWPS
MW-410	Barium	mg/L	0.0862	0.806	N/A - No SSI	2
	TSS[(1)]	mg/L	2.88	N/A	N/A	N/A

NOTES:

[(1)] TSS data is presented for additional information and is not compared to a background standard or GWPS.

*Current result is above laboratory reporting limits. The constituent is not an active SSI and is the initial detection above laboratory reporting limits. The SSI will be verified during the next sampling event.

J - A laboratory flag for a constituent detected between the method detection limit (MDL) and the laboratory's reporting limit (RL). The concentrations are estimated values and are not considered statistically significant.

mg/L - milligrams per liter

µg/L - micrograms per liter

GWPS - Groundwater Protection Standard

LCL - Lower Confidence Limit

N/A - Not Applicable

SSI - Statistically Significant Increase

TSS - Total Suspended Solids

COMMENTS:

- This table reports only constituents with concentrations detected above the MDL at monitoring locations in the Assessment Monitoring Program or are an Attenuation Zone Point of Compliance (AZPOC) Monitoring Well. The full list of constituents analyzed at these monitoring locations during the monitoring event is in the laboratory analytical reports included in **Appendix C**.

NOTES:

* - Indicates the monitoring well was designated as a source well in Revised Permit #7, dated September 2, 2021 (Iowa Department of Natural Resources Doc #101157). Statistical conclusions in accordance with 567 IAC 113.10(6) are no longer applicable after this

** - Initial result was above background, later confirmed as not an SSI through verification sampling

+ - The bis[2-ethylhexyl]phthalate SSI was not confirmed due to suspected laboratory contamination.

NS - Not Sampled; The monitoring point is either sampled annually or was dry during the montioring event.

SSI - Statistically Significant Increase

SSL - Statistically Significant Level

COMMENTS:

- For the 2022 reporting period and earlier, only initial confirmed SSIs were recorded on this table for inorganic constituents. Beginning in the 2023 reporting period, potential inorganic SSIs are included in this table.

This page intentionally left blank.

	TSS[(1)]	mg/L	80.0	N/A	N/A

NOTES:

BOLD - Result is above the GWPS.

[(1)] TSS data is presented for additional information and is not compared to a background standard or GWPS.

J - A laboratory flag for a constituent detected between the method detection limit (MDL) and the laboratory's reporting limit (RL). The concentrations are estimated values and are not considered statistically significant.

mg/L - milligrams per liter

GWPS - Groundwater Protection Standard

N/A - Not Applicable

TSS - Total Suspended Solids

UCL - Upper Confidence Limit

COMMENTS:

- This table reports only constituents with concentrations detected above the method detection limit (MDL) at monitoring locations that are identified as Corrective Action Bracketing Wells. The full list of constituents analyzed at these monitoring locations during the monitoring event is in the laboratory analytical reports included in **Appendix C**.

- Confidence intervals were calculated using the eight (8) most recent measurements for each constituent detected above the MDL during the semiannaul compliance monitoring event. Under Corrective Action Monitoring, the UCL is compared to the GWPS to identify the relative impact to the groundwater at the Bracketing Well location and if concentrations have been reduced.

This page intentionally left blank.

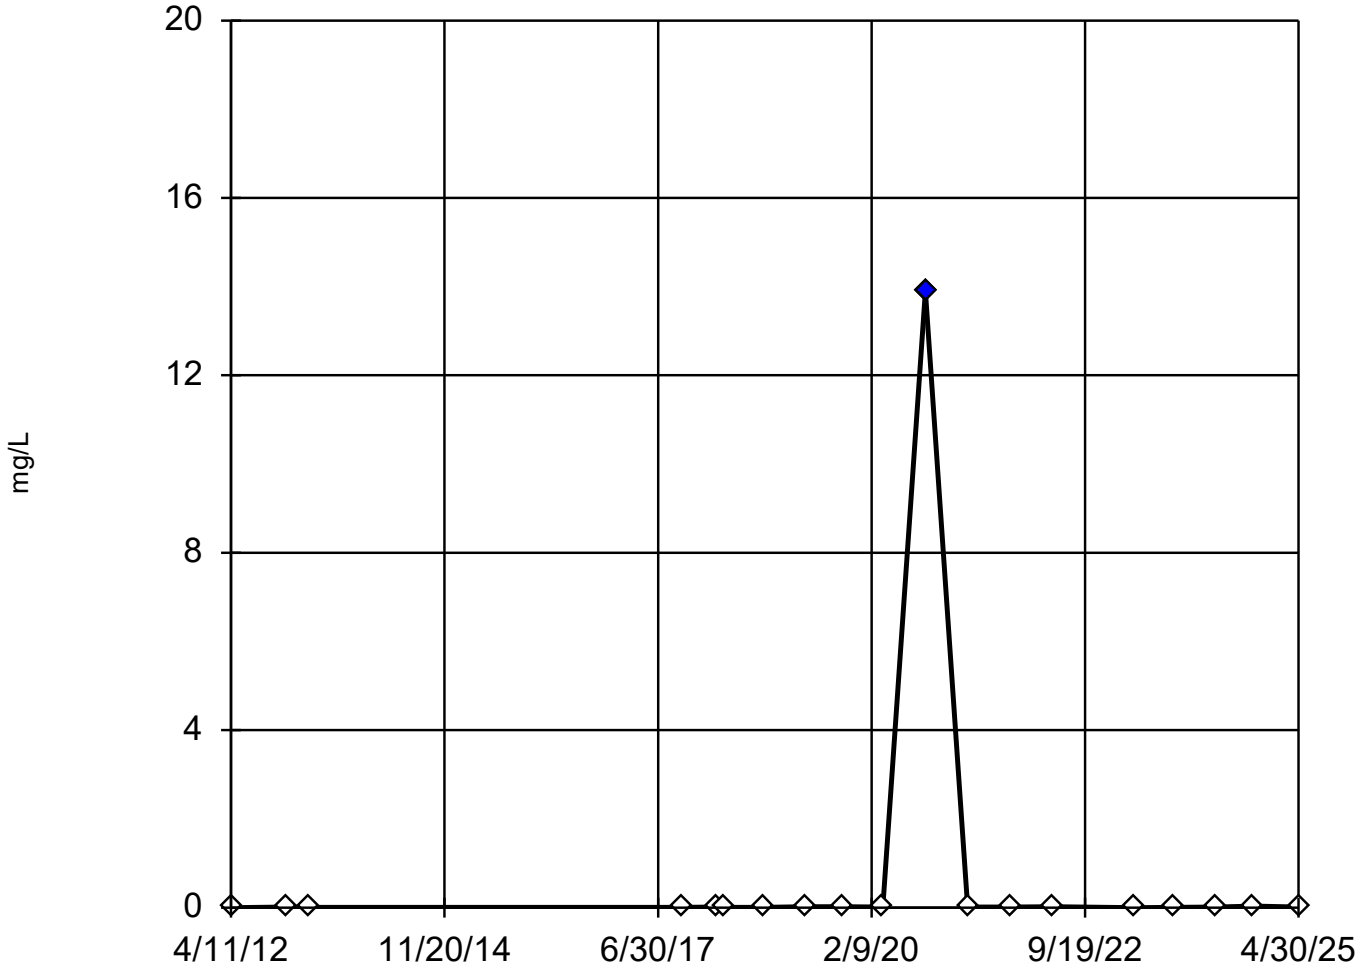
Outliers Analysis

This page intentionally left blank.

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Dixon's Outlier Test

WT-3



n = 19

Statistical outlier is drawn as solid.
1 value manually flagged as an outlier.
Testing for 1 high outlier.
Mean = 0.743.
Std. Dev. = 3.186.
13.9 (o): c = 0.9987
tabl = 0.462.
Alpha = 0.05.

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9288
Critical = 0.914
The distribution, after removal of suspect value, was found to be normally distributed.

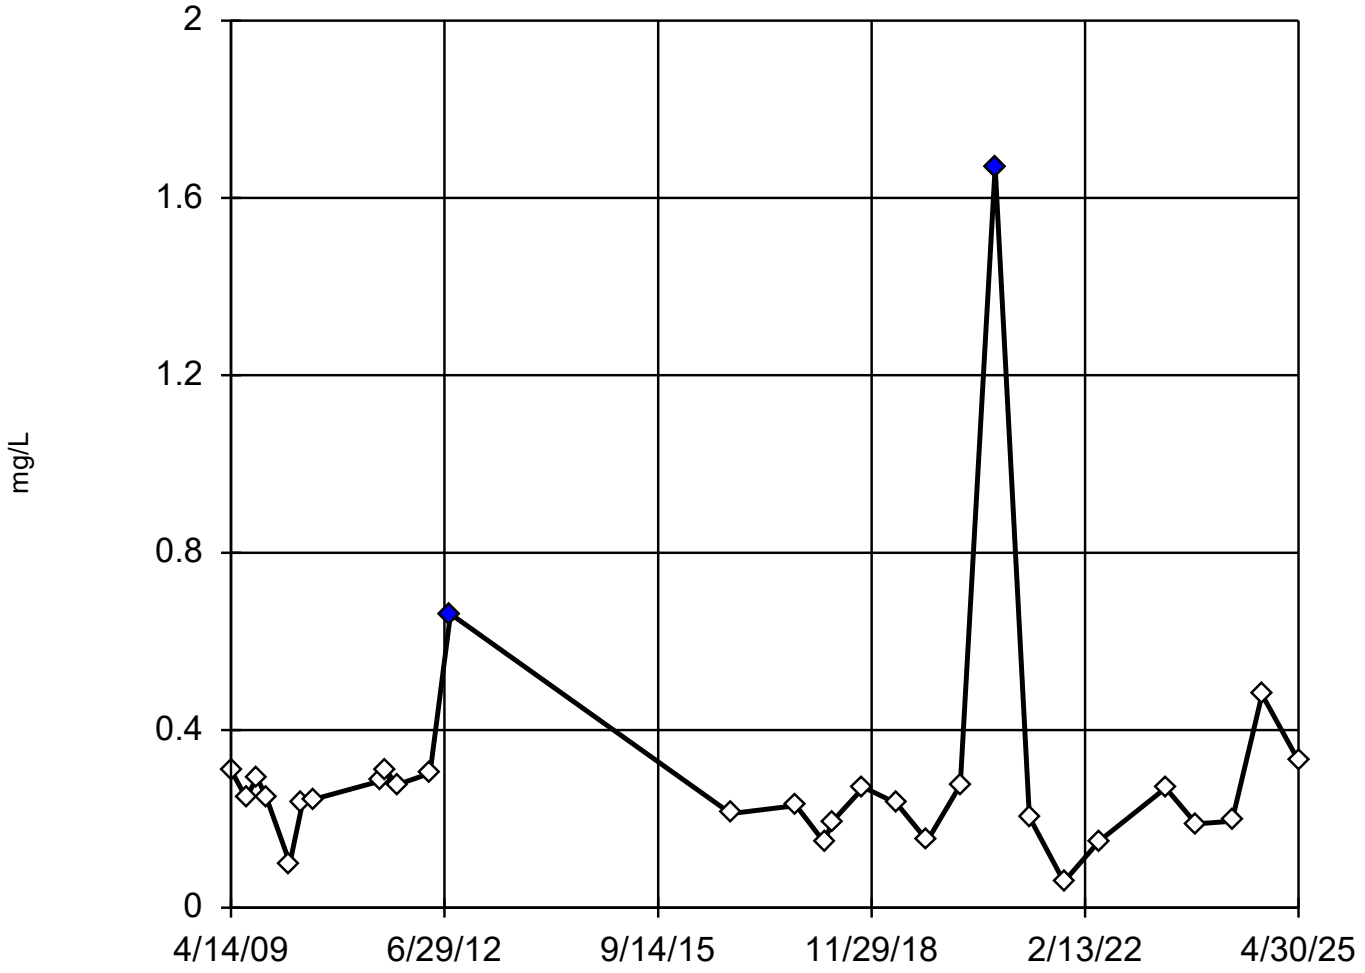
Constituent: Arsenic Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Rosner's Outlier Test

WT-1



n = 29

Statistical outliers are drawn as solid.
1 value manually flagged as an outlier.

k = 3
r = 3.595
Tabulated value = 2.992
Alpha = 0.01

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9551
Critical = 0.935
The distribution, after removal of suspect values, was found to be normally distributed.

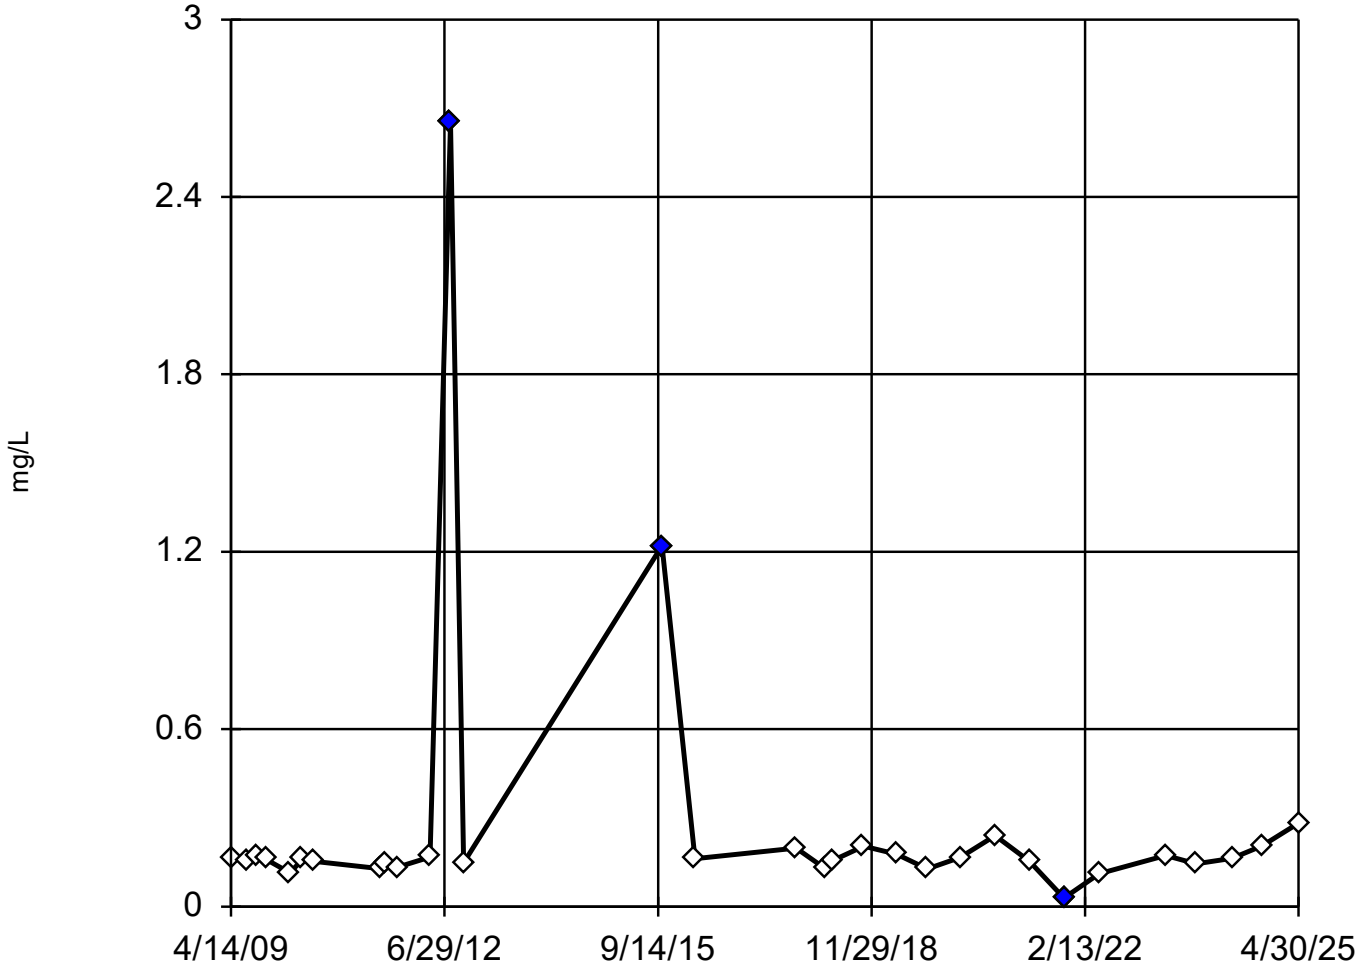
Constituent: Barium Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Rosner's Outlier Test

WT-2



n = 31

Statistical outliers are drawn as solid.
2 values manually flagged as outliers.

k = 4
r = 4.407
Tabulated value = 3.028
Alpha = 0.01

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9491
Critical = 0.936 (after natural log transformation)
The distribution, after removal of suspect values, was found to be log-normal.

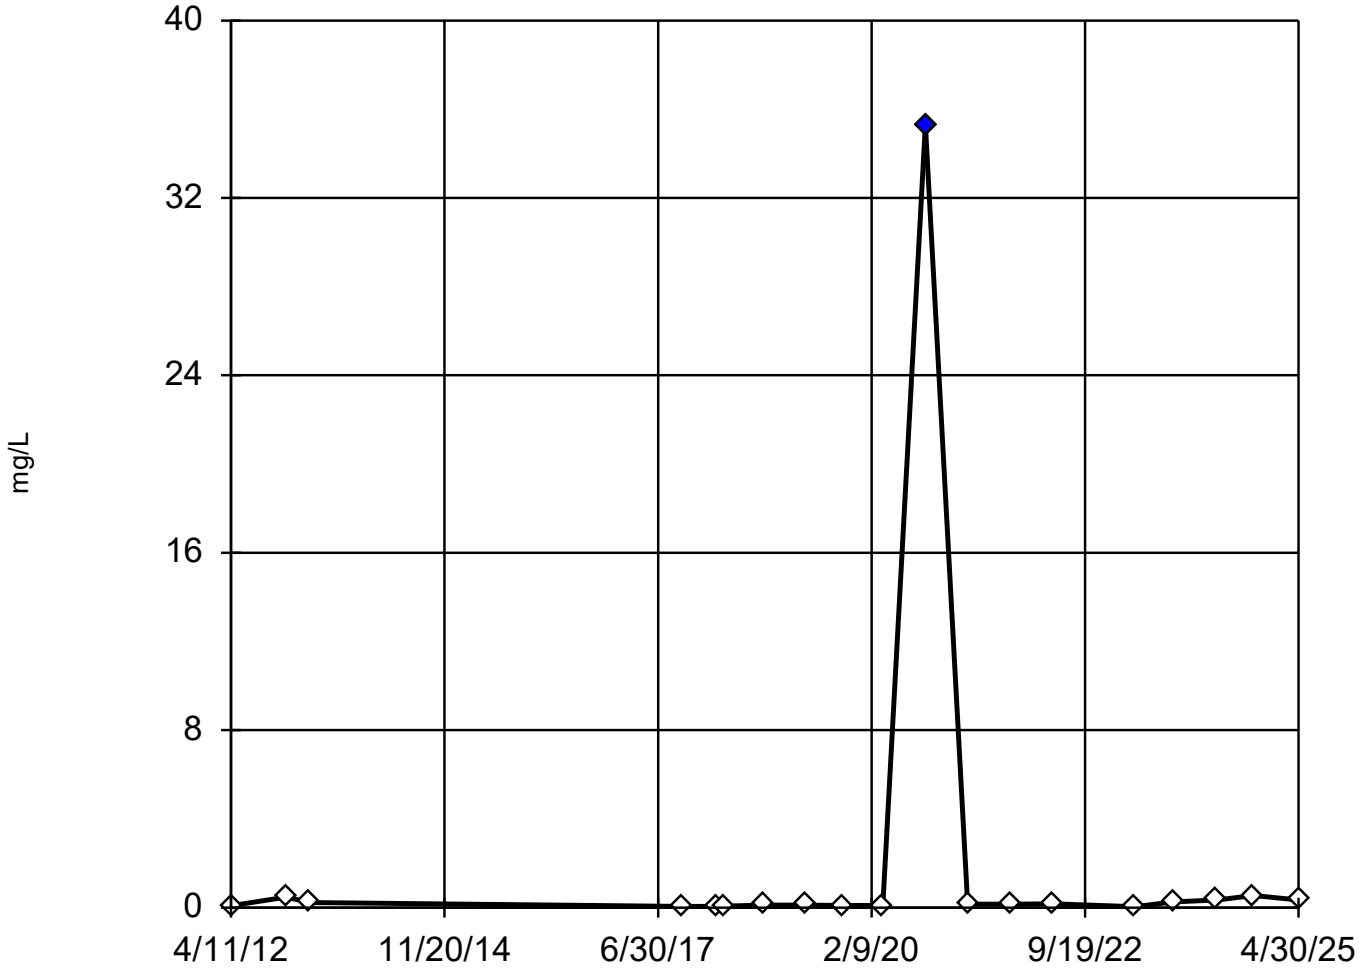
Constituent: Barium Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Dixon's Outlier Test

WT-3



n = 19

Statistical outlier is drawn as solid.
1 value manually flagged as an outlier.
Testing for 1 high outlier.
Mean = 2.037.
Std. Dev. = 8.056.
35.3 (o): c = 0.6795
tabl = 0.462.
Alpha = 0.05.

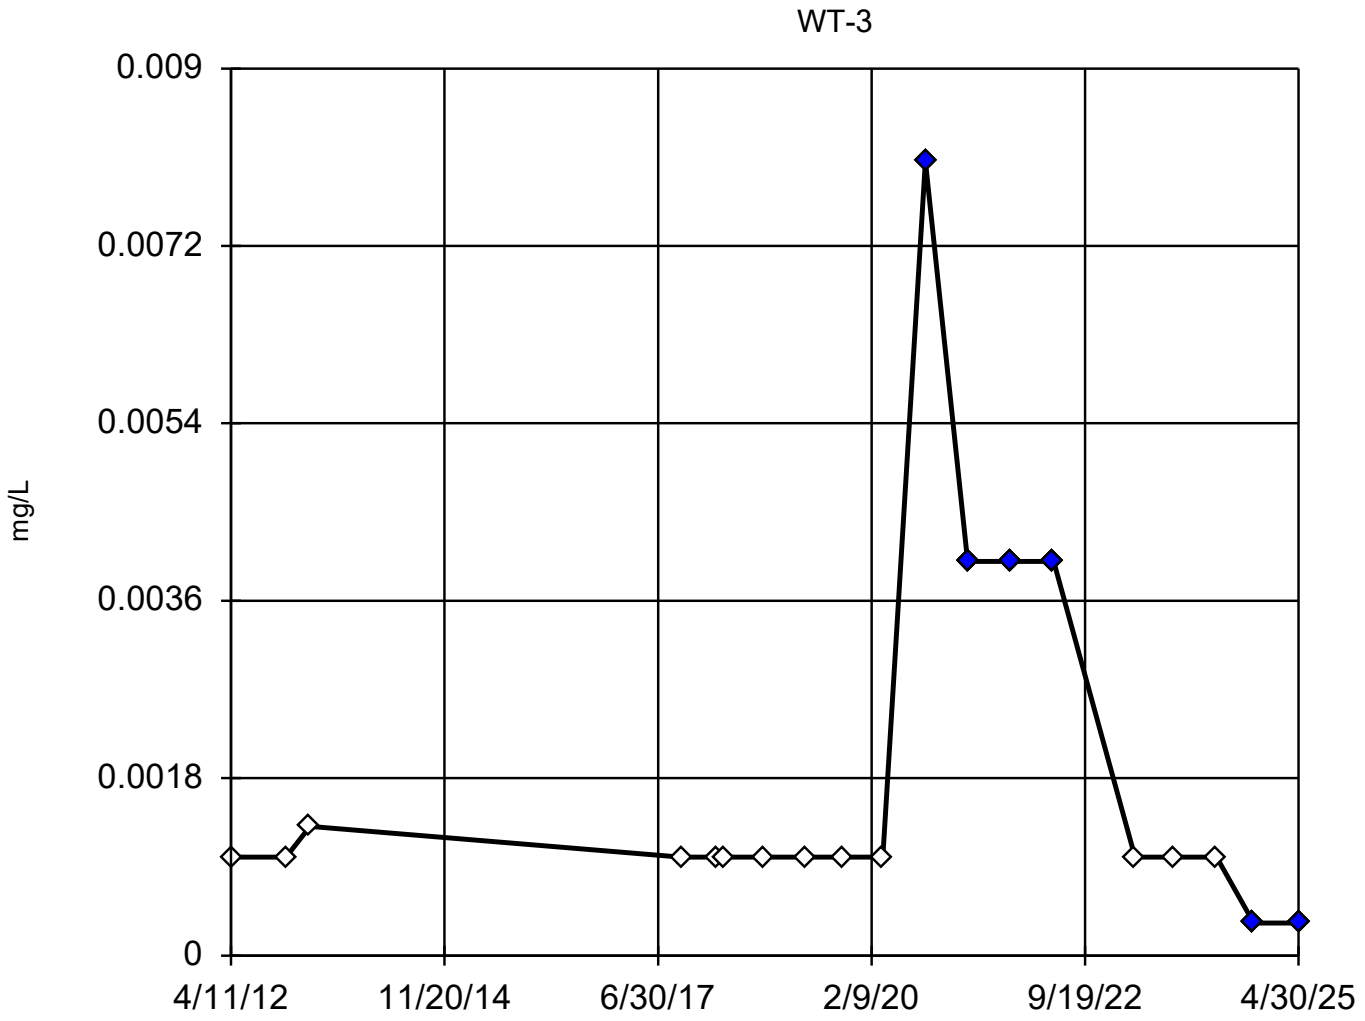
Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9747
Critical = 0.914 (after natural log transformation)
The distribution, after removal of suspect value, was found to be log-normal.

Constituent: Barium Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Tukey's Outlier Screening



n = 19

Outliers are drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.002945, low cutoff = 0.0004448, based on IQR multiplier of 3.

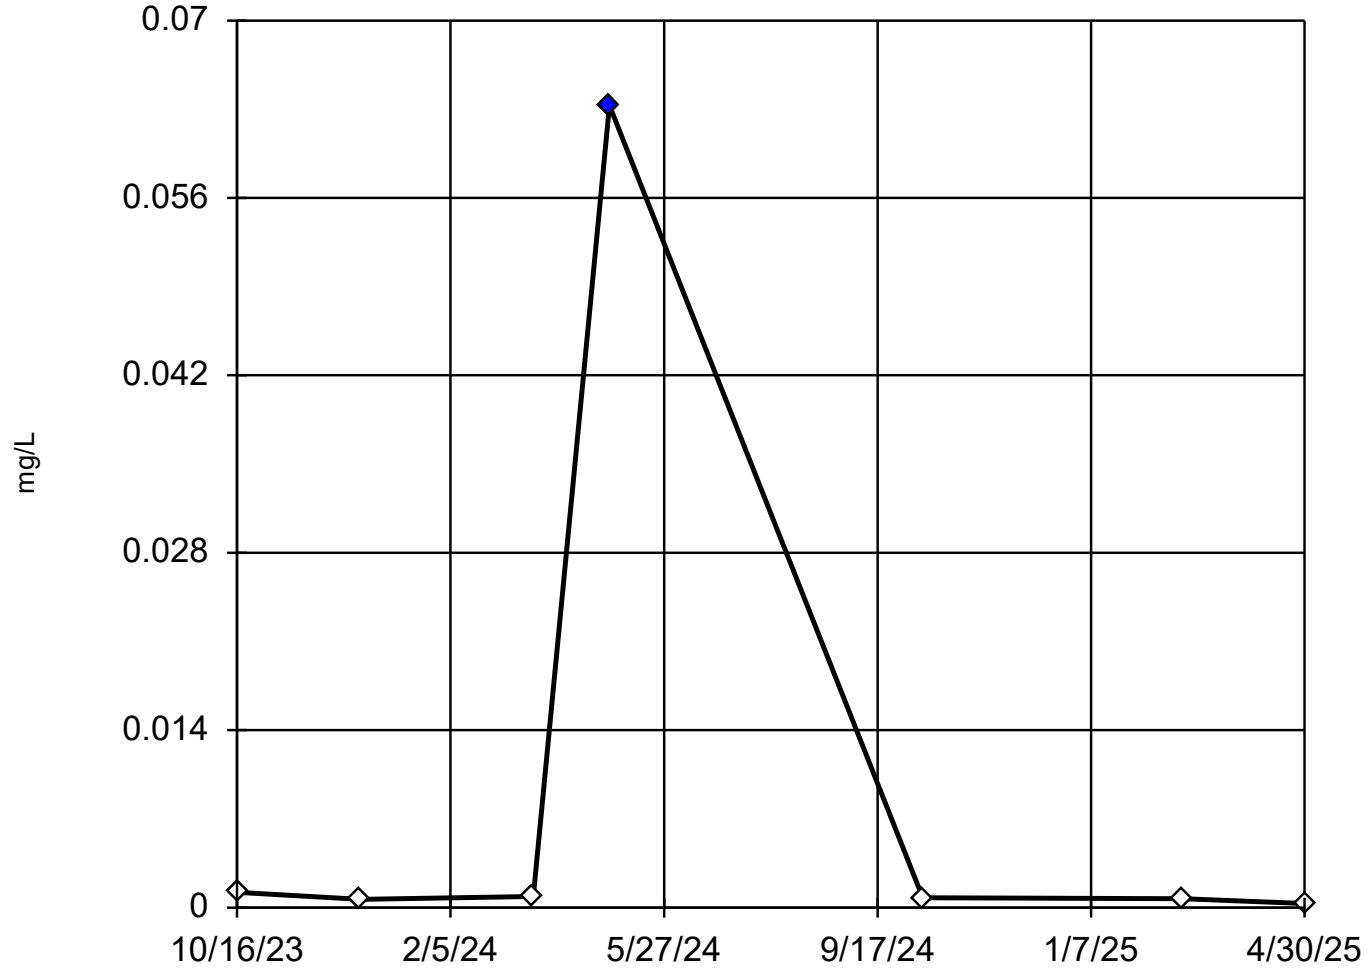
Constituent: Beryllium Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Dixon's Outlier Test

WT-OF



n = 7

Statistical outlier is drawn as solid.
1 value manually flagged as an outlier.
Testing for 1 high outlier.
Mean = 0.009692.
Std. Dev. = 0.02364.
0.0633 (o): c = 0.9861
tabl = 0.507.
Alpha = 0.05.

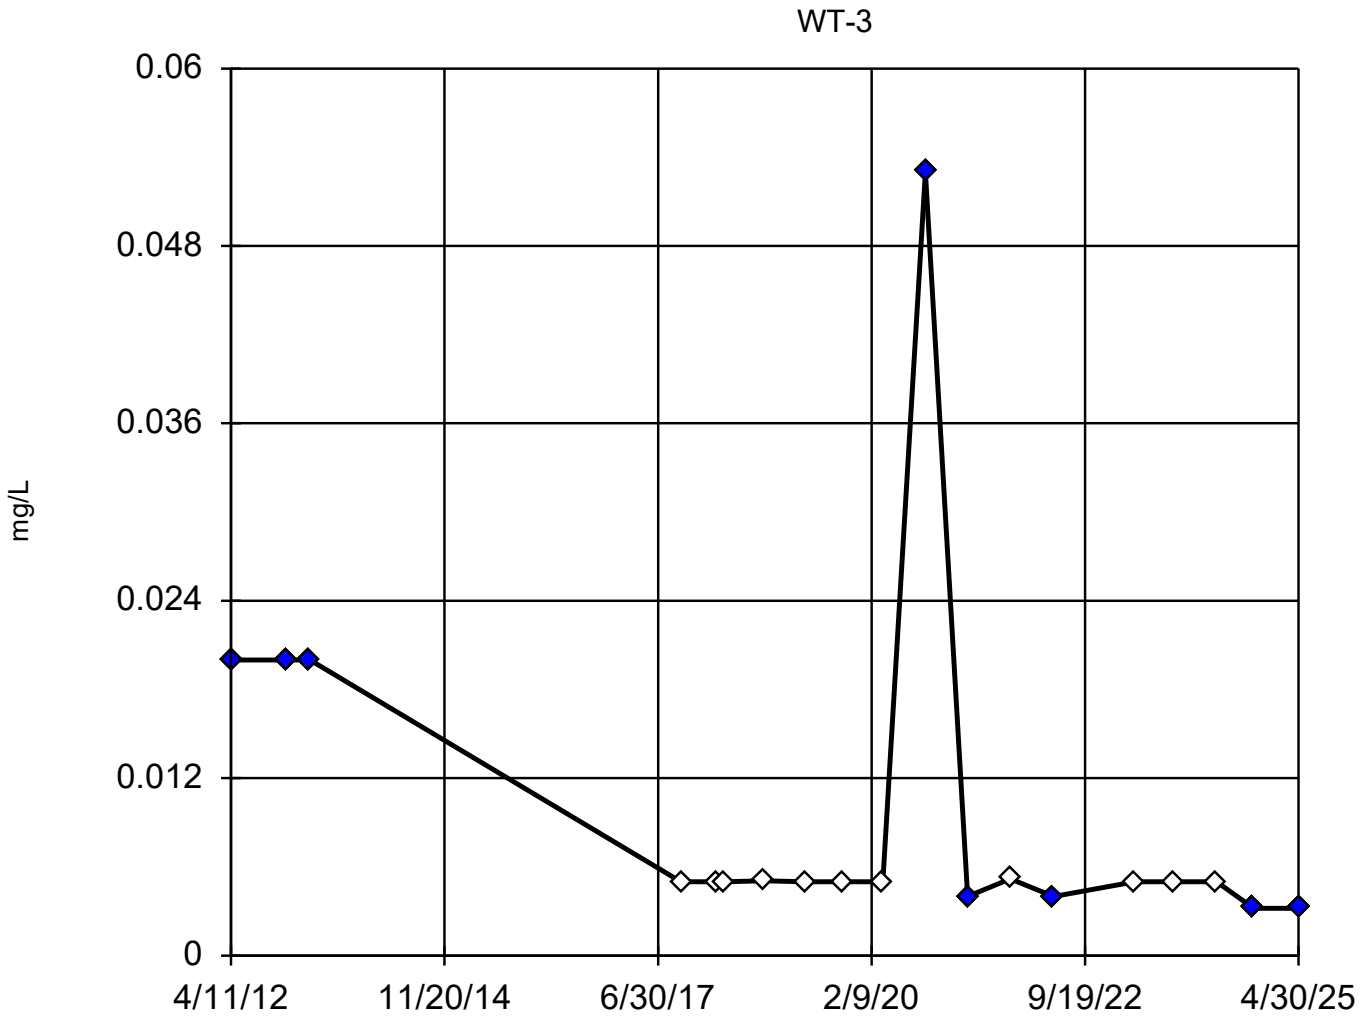
Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9684
Critical = 0.826
The distribution, after removal of suspect value, was found to be normally distributed.

Constituent: Cobalt Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Tukey's Outlier Screening



n = 19

Outliers are drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

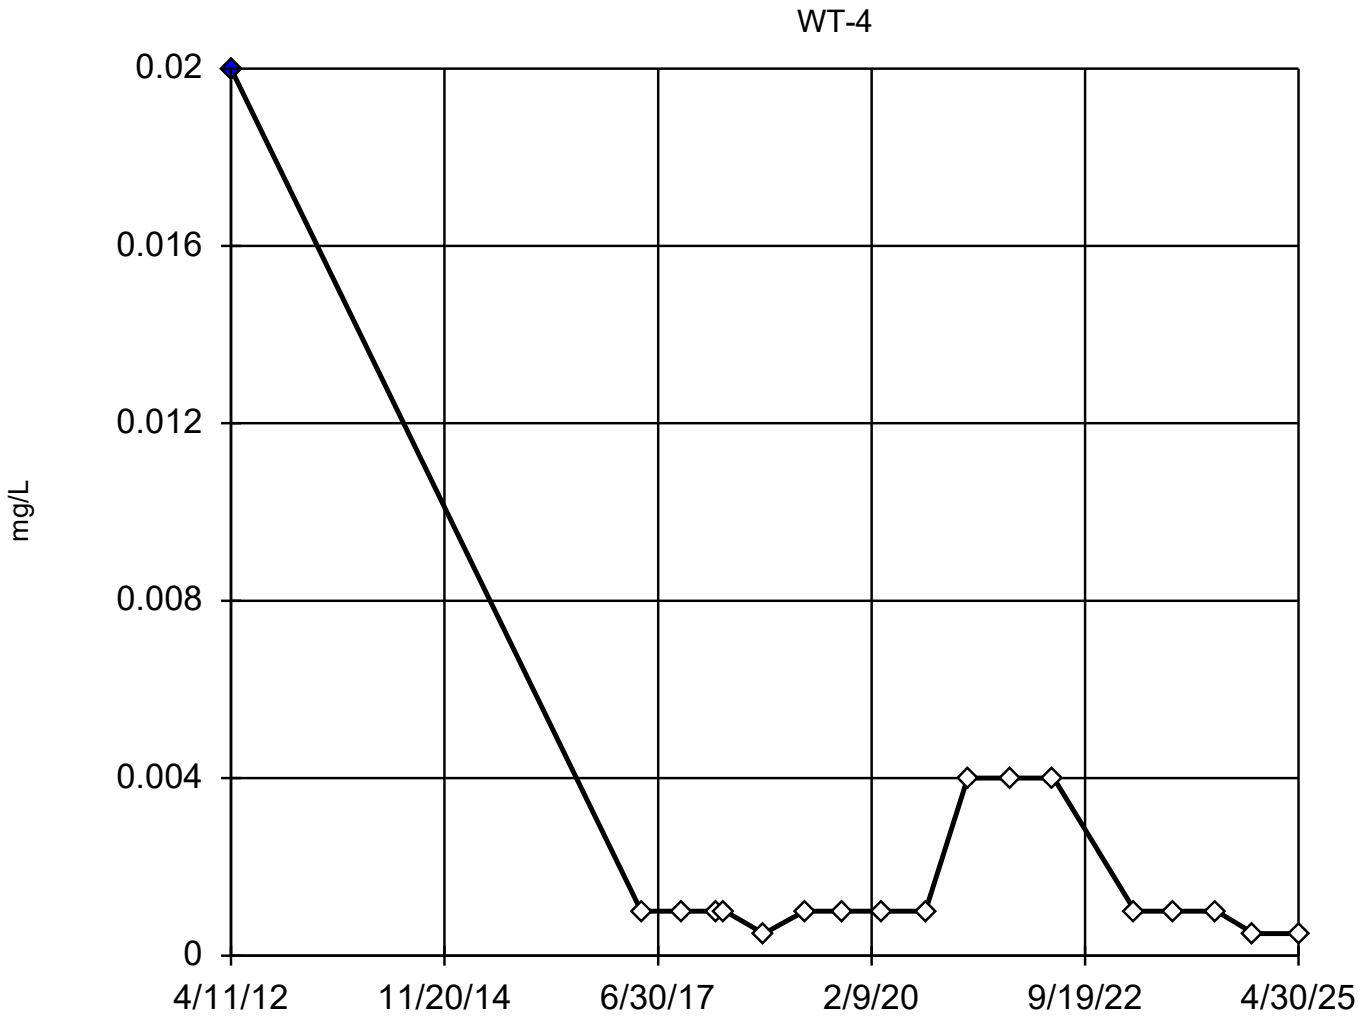
High cutoff = 0.005849, low cutoff = 0.004445, based on IQR multiplier of 3.

Constituent: Copper Analysis Run 6/24/2025 2:56 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Tukey's Outlier Screening



n = 18

Outlier is drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

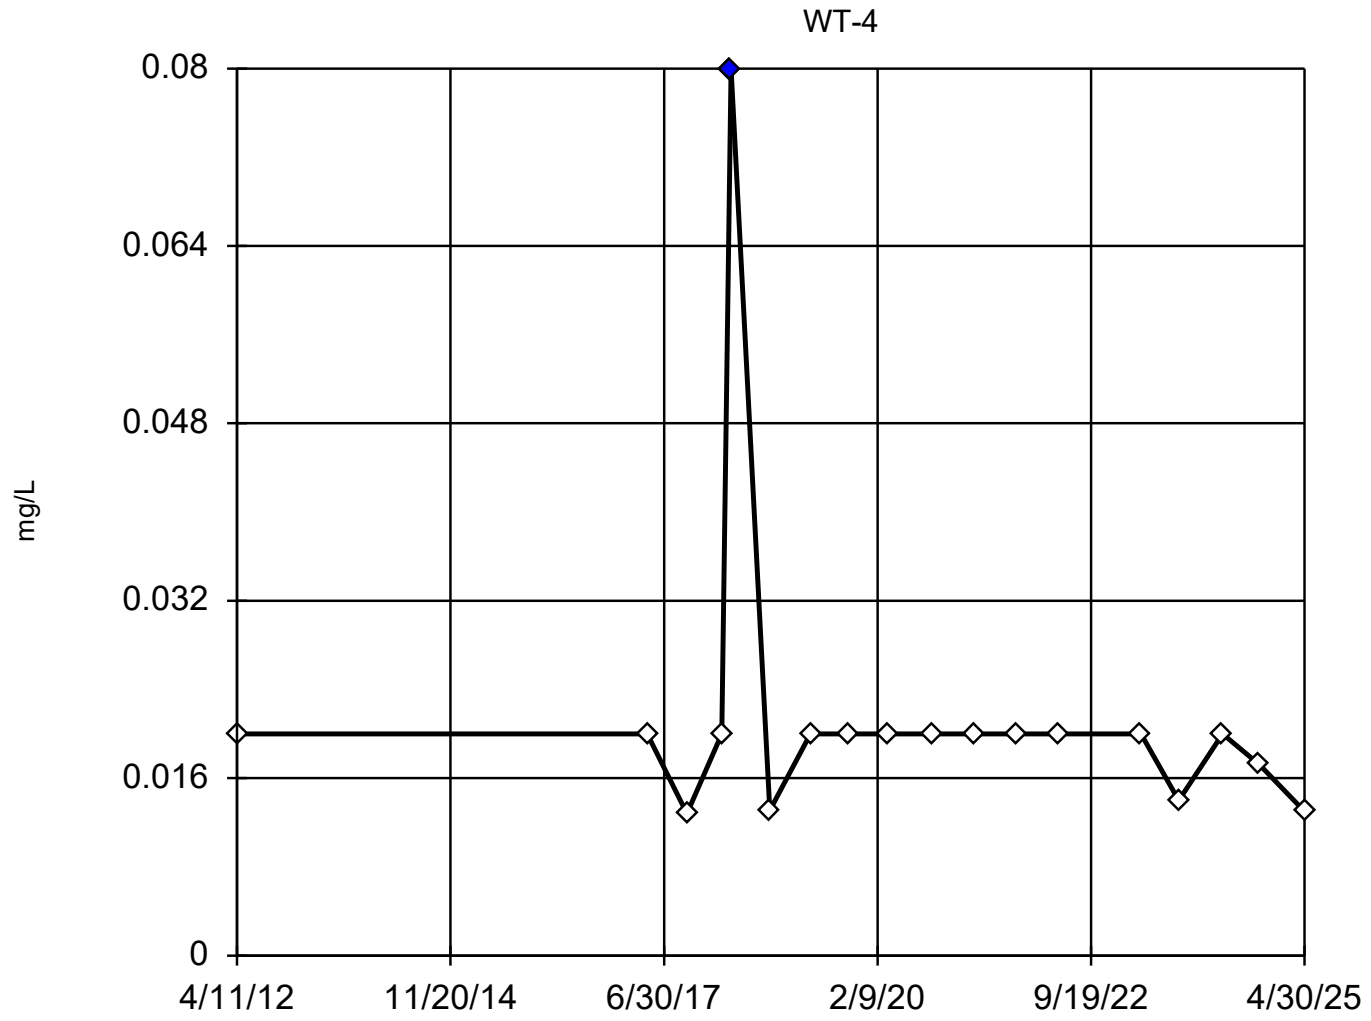
High cutoff = 0.016, low cutoff = 0.000125, based on IQR multiplier of 3.

Constituent: Silver Analysis Run 6/24/2025 2:57 PM View: 01_GU_Inorganics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Tukey's Outlier Screening



n = 18

Outlier is drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.04282, low cutoff = 0.007248, based on IQR multiplier of 3.

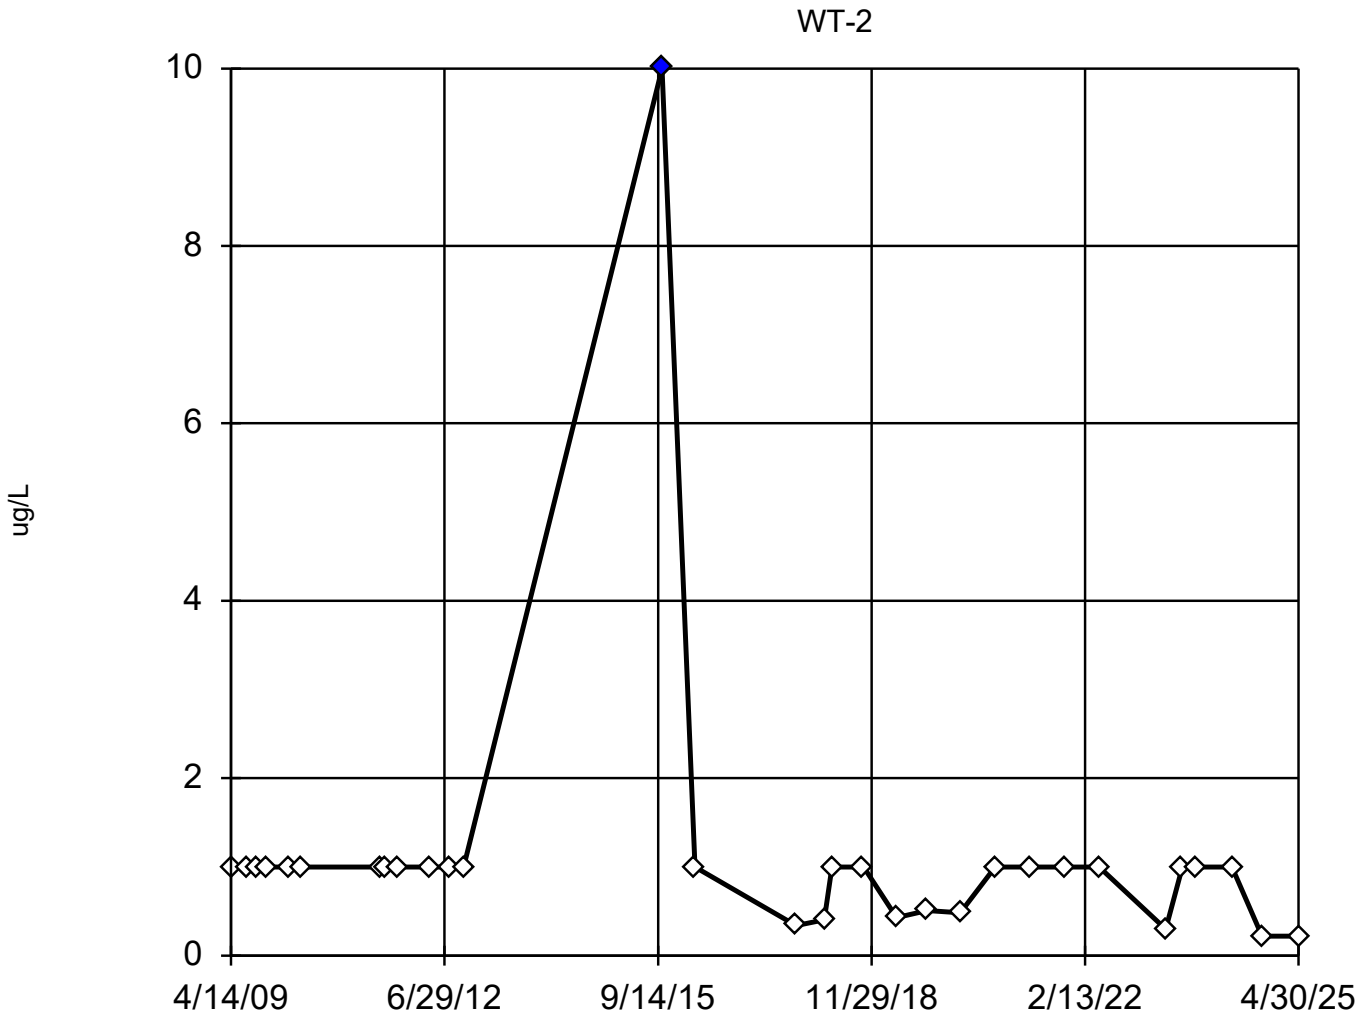
Tukey's Outlier Screening



n = 31

Outlier is drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 7.628, low cutoff = 0.0666, based on IQR multiplier of 3.

Constituent: 1,1-Dichloroethane Analysis Run 7/11/2025 1:05 PM View: 02_GU_Organics

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

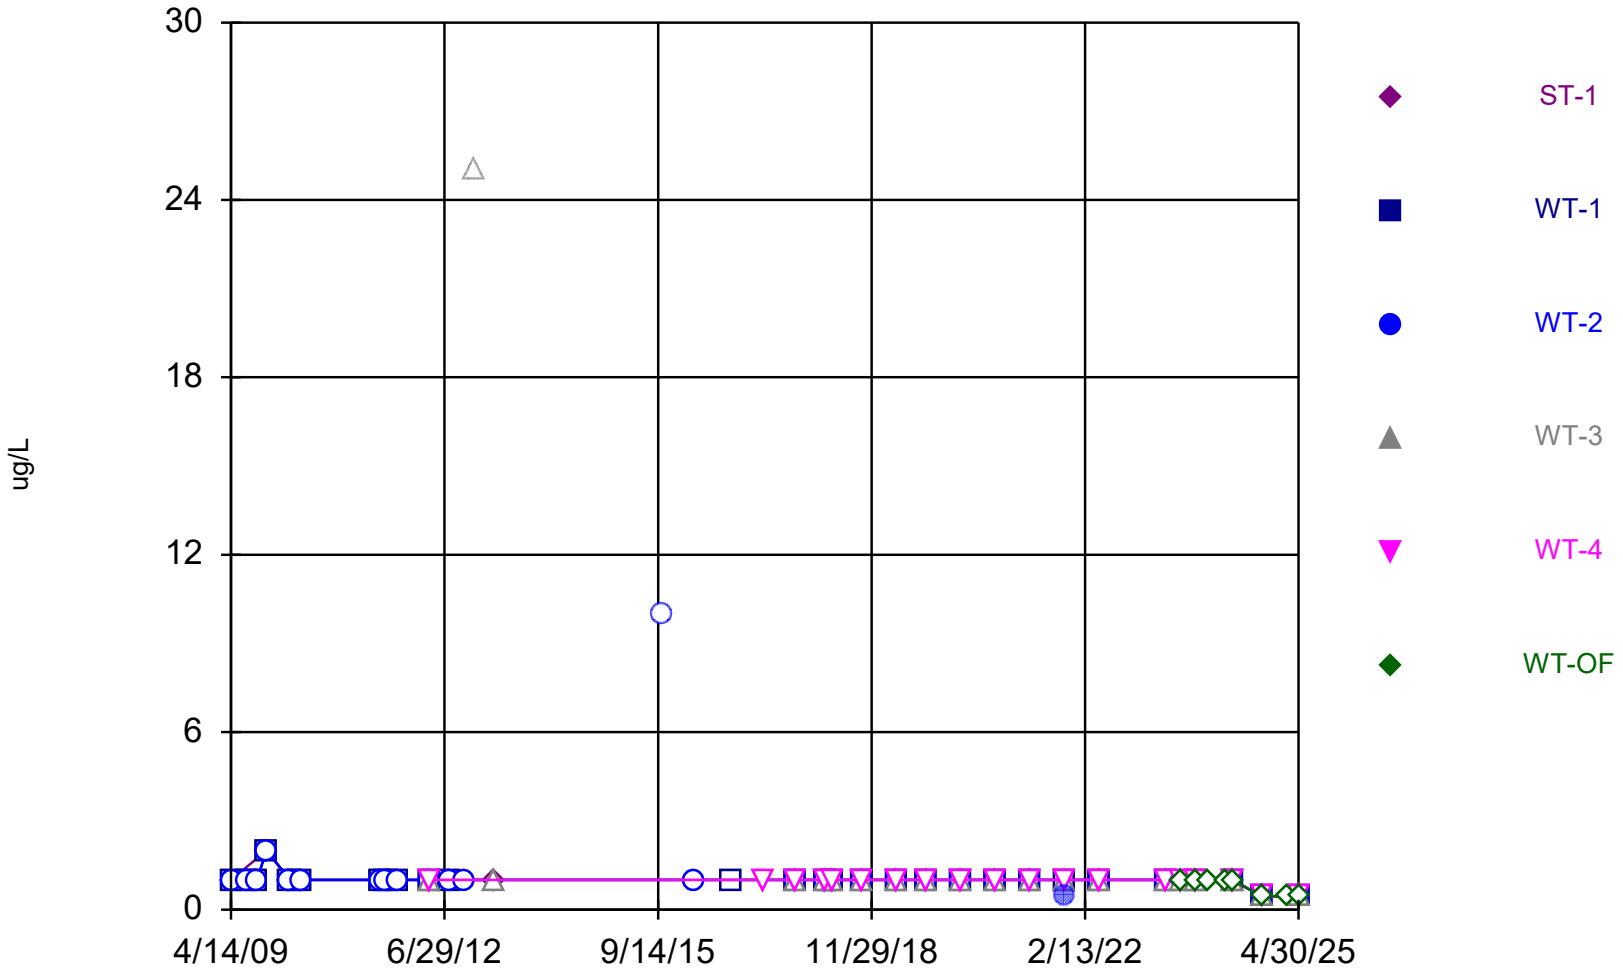
Constituent: 1,1,2,2-Tetrachloroethane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

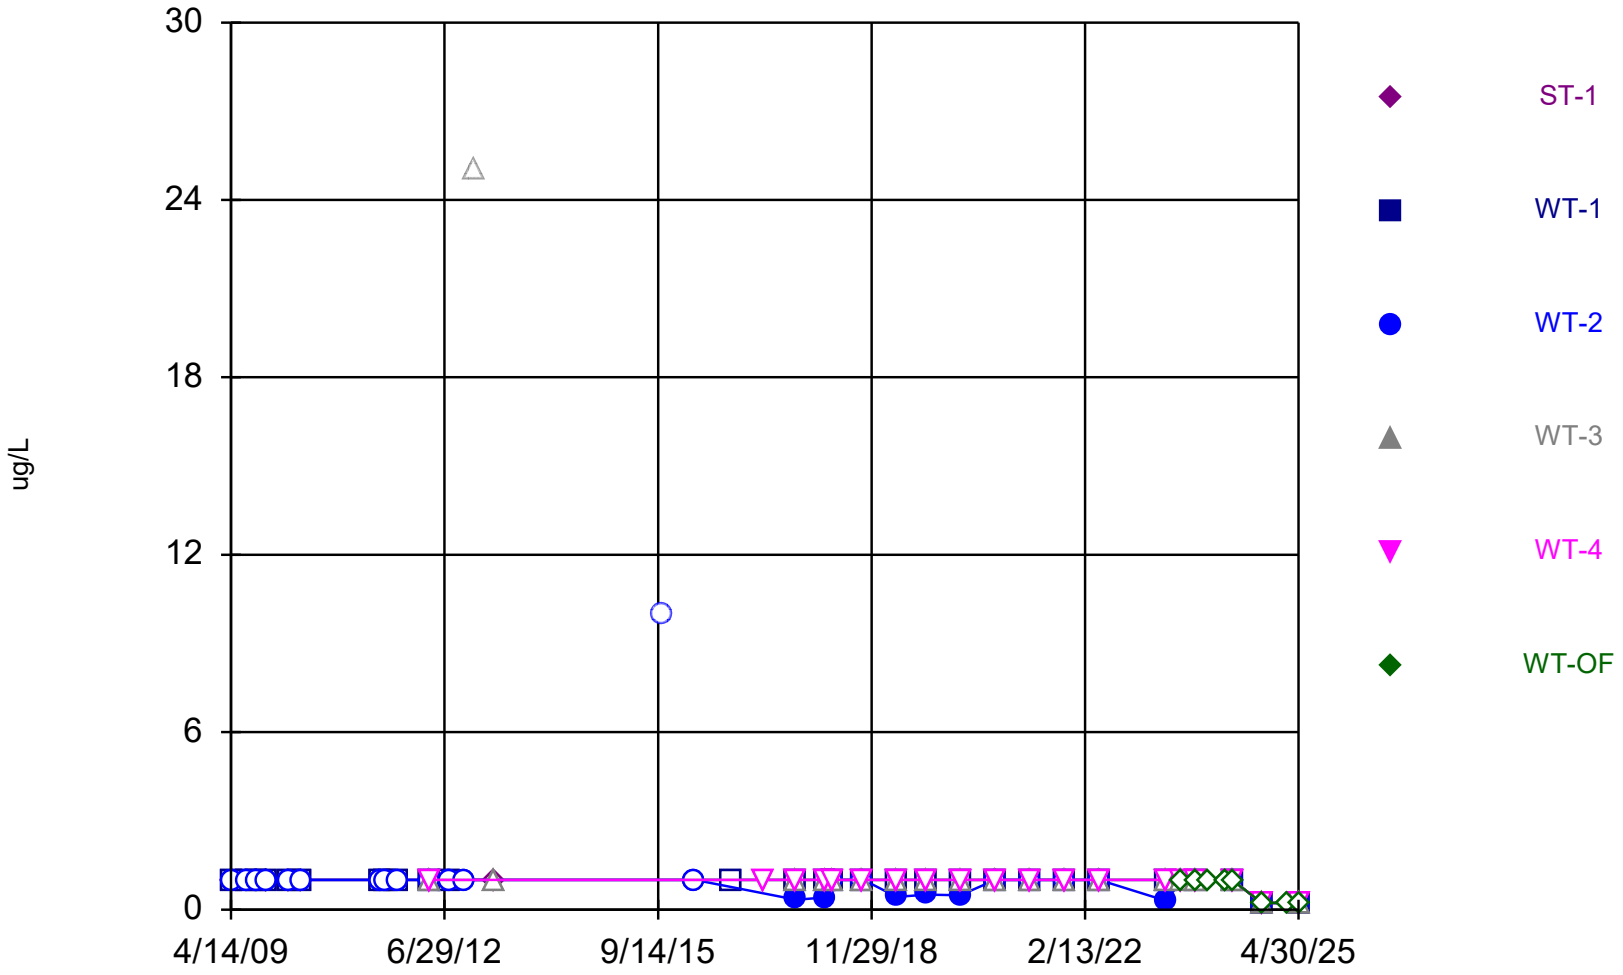


Constituent: 1,1,2-Trichloroethane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

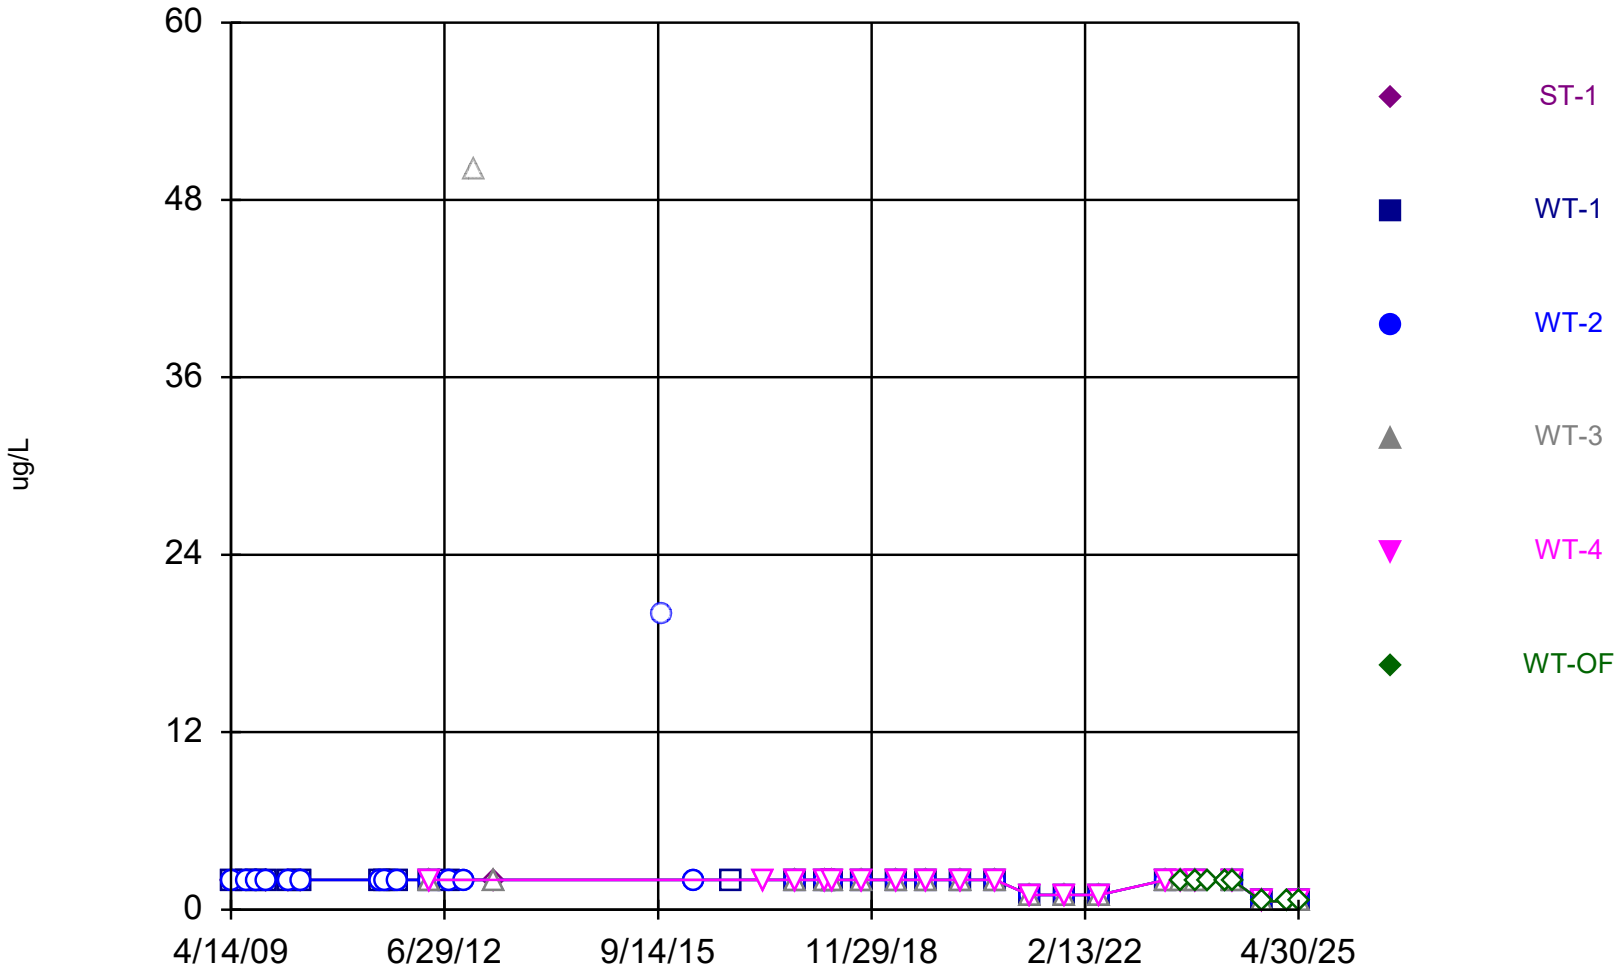


Constituent: 1,1-Dichloroethane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

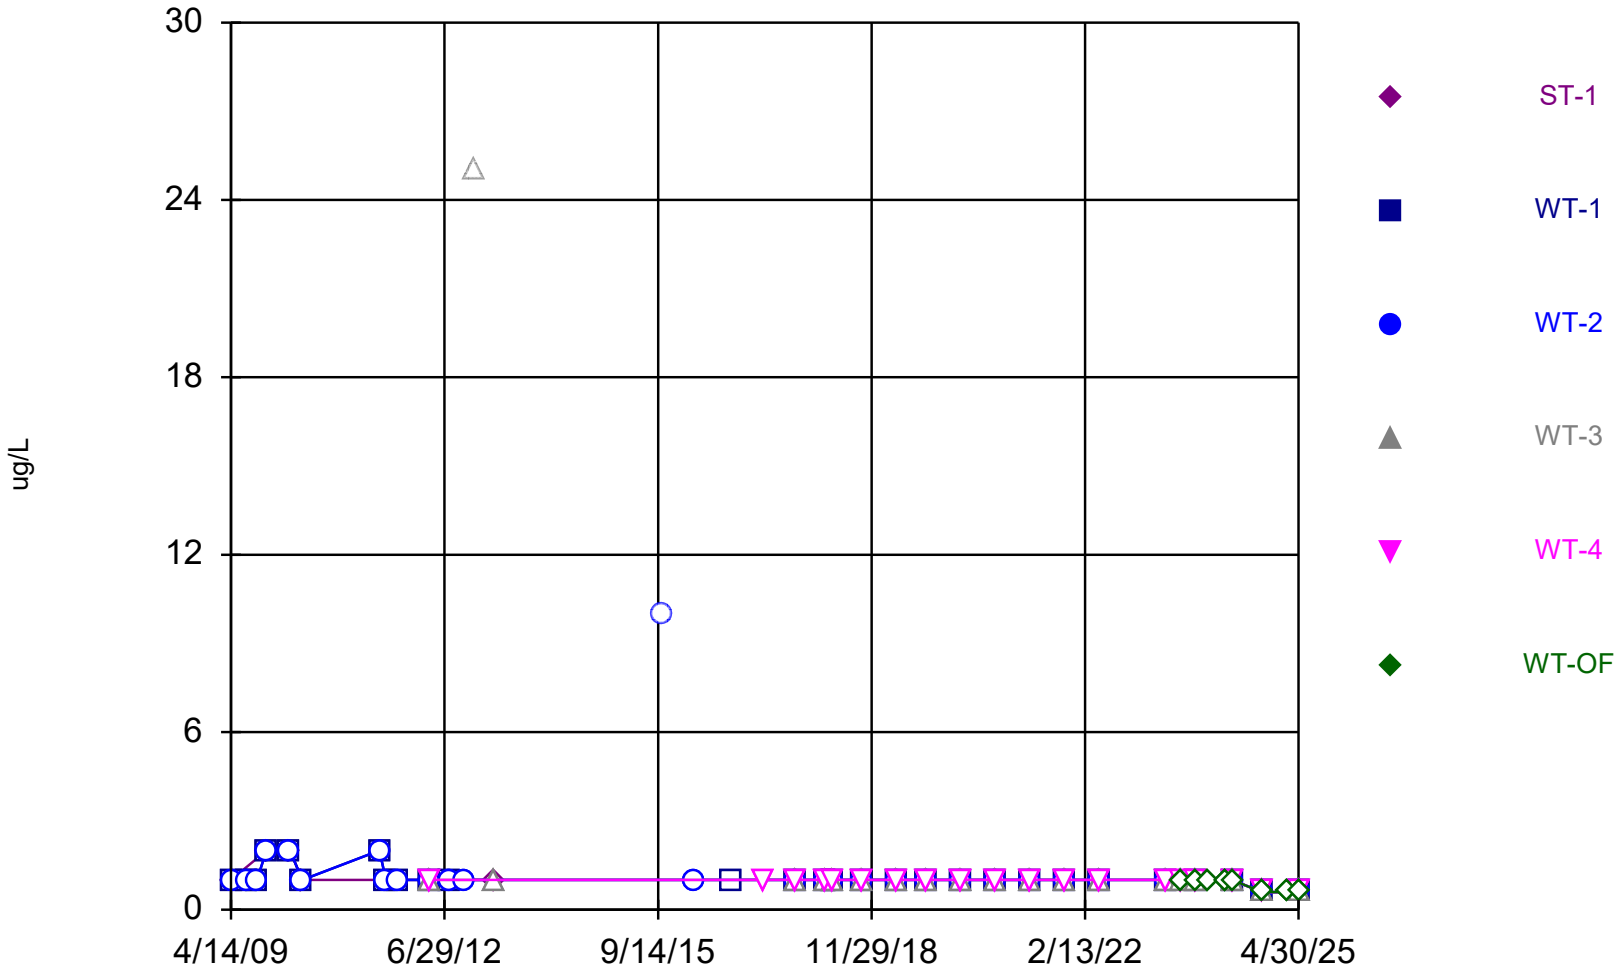


Constituent: 1,1-Dichloroethene Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

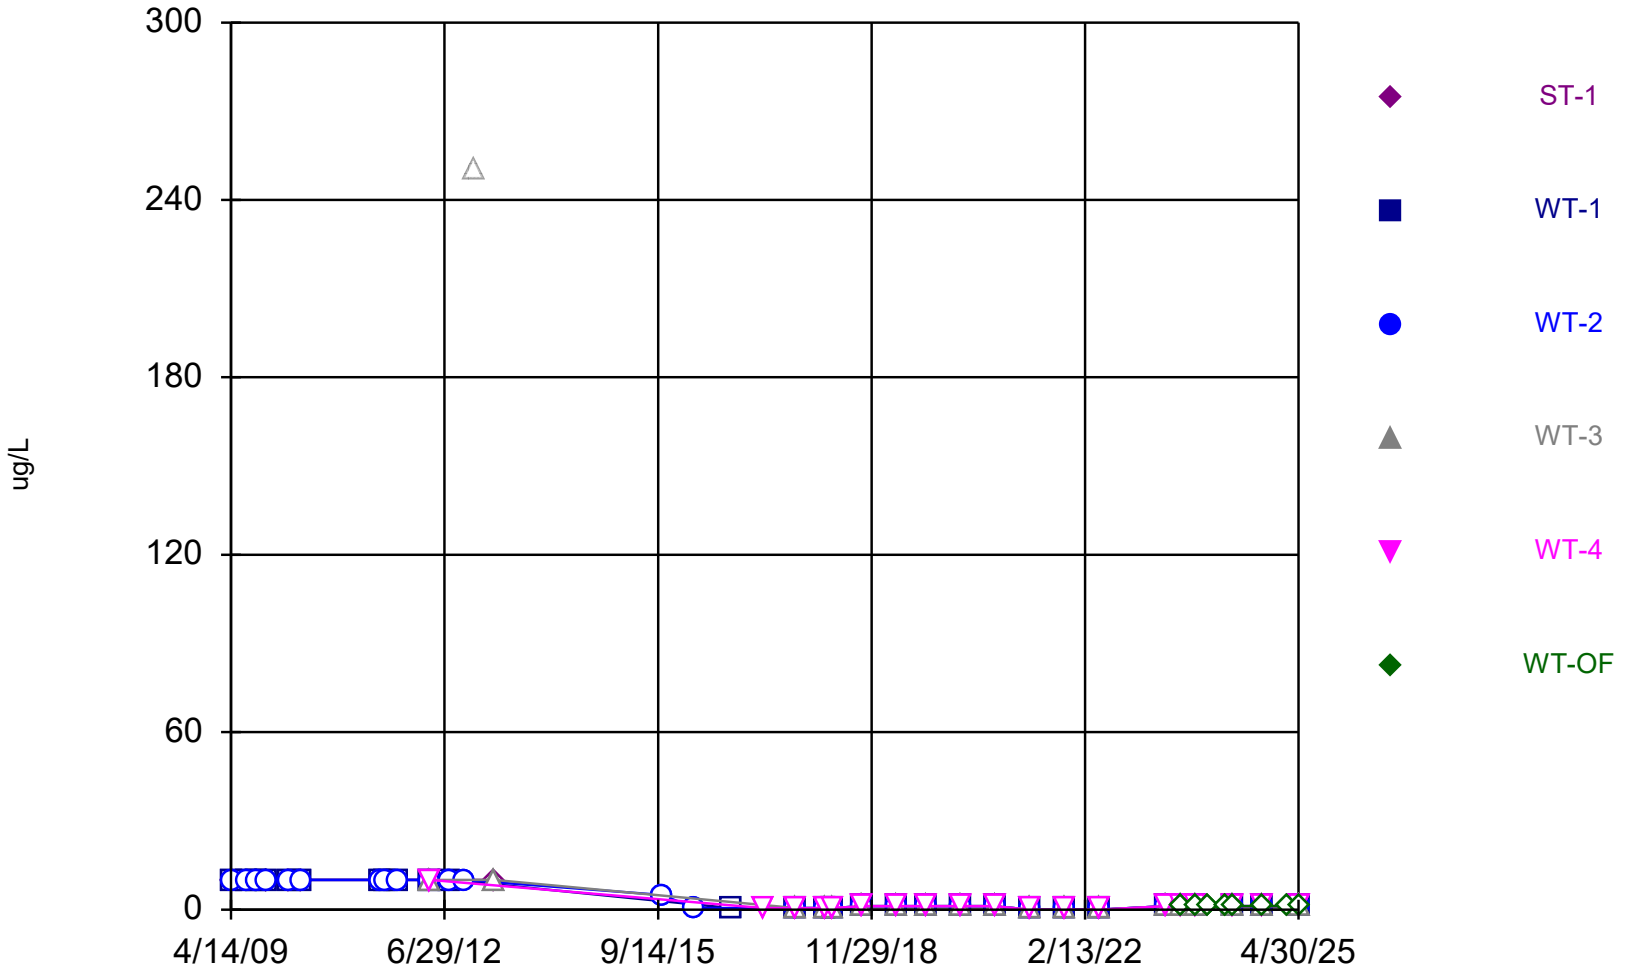


Constituent: 1,2,3-Trichloropropane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

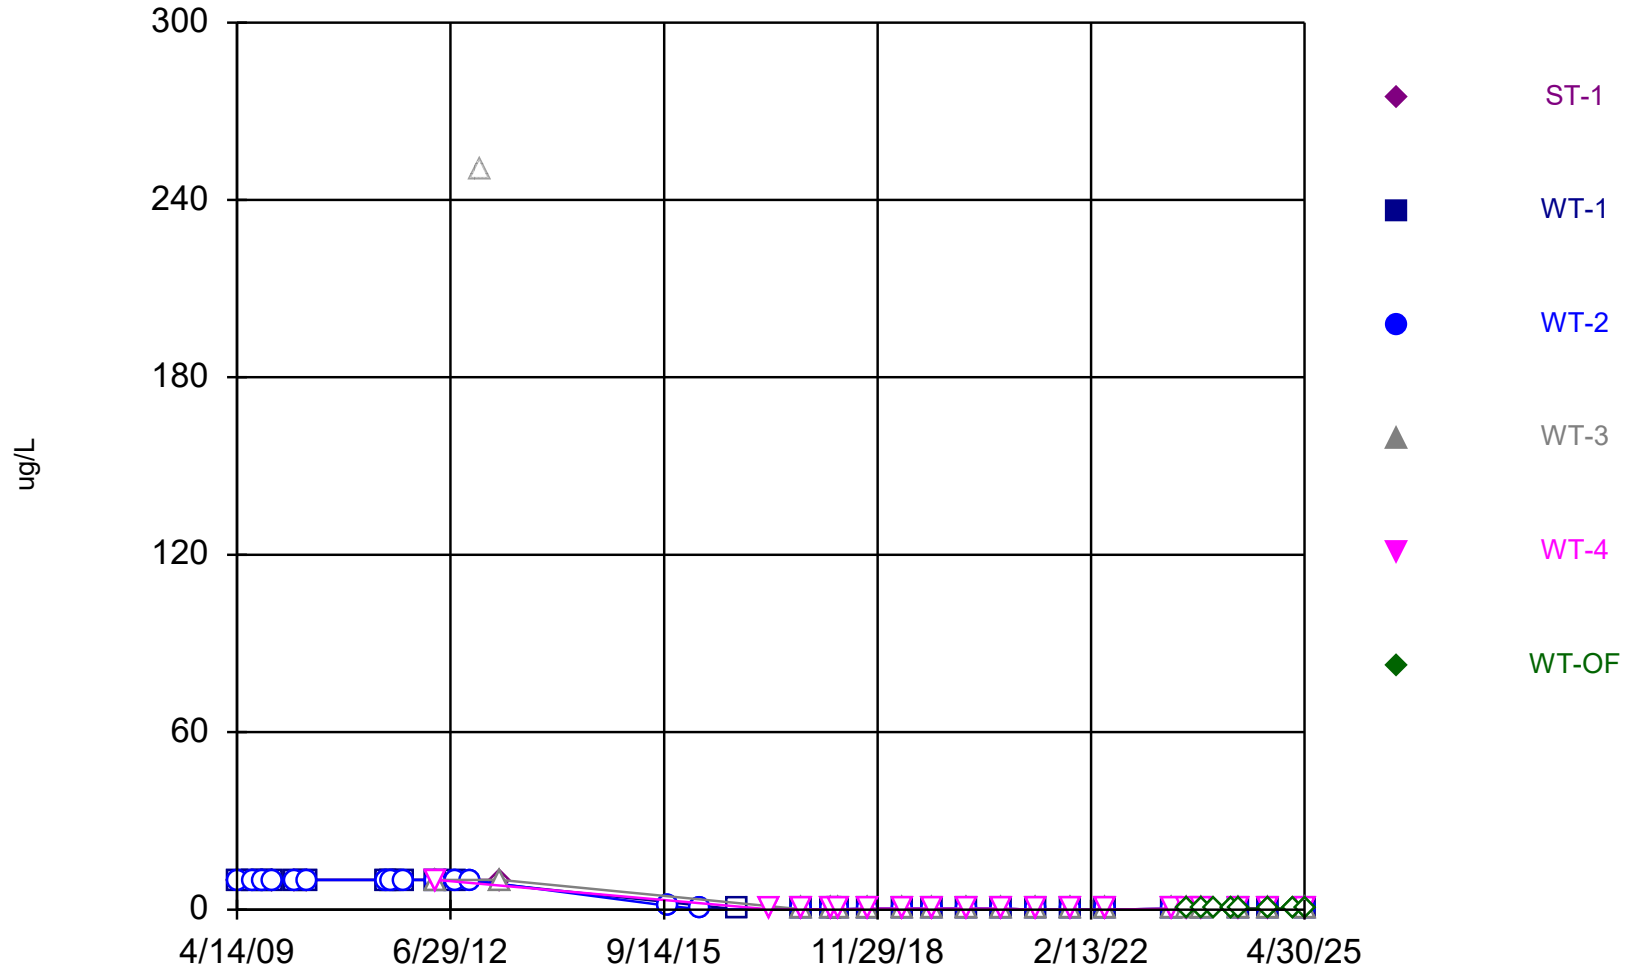


Constituent: 1,2-Dibromo-3-Chloropropane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

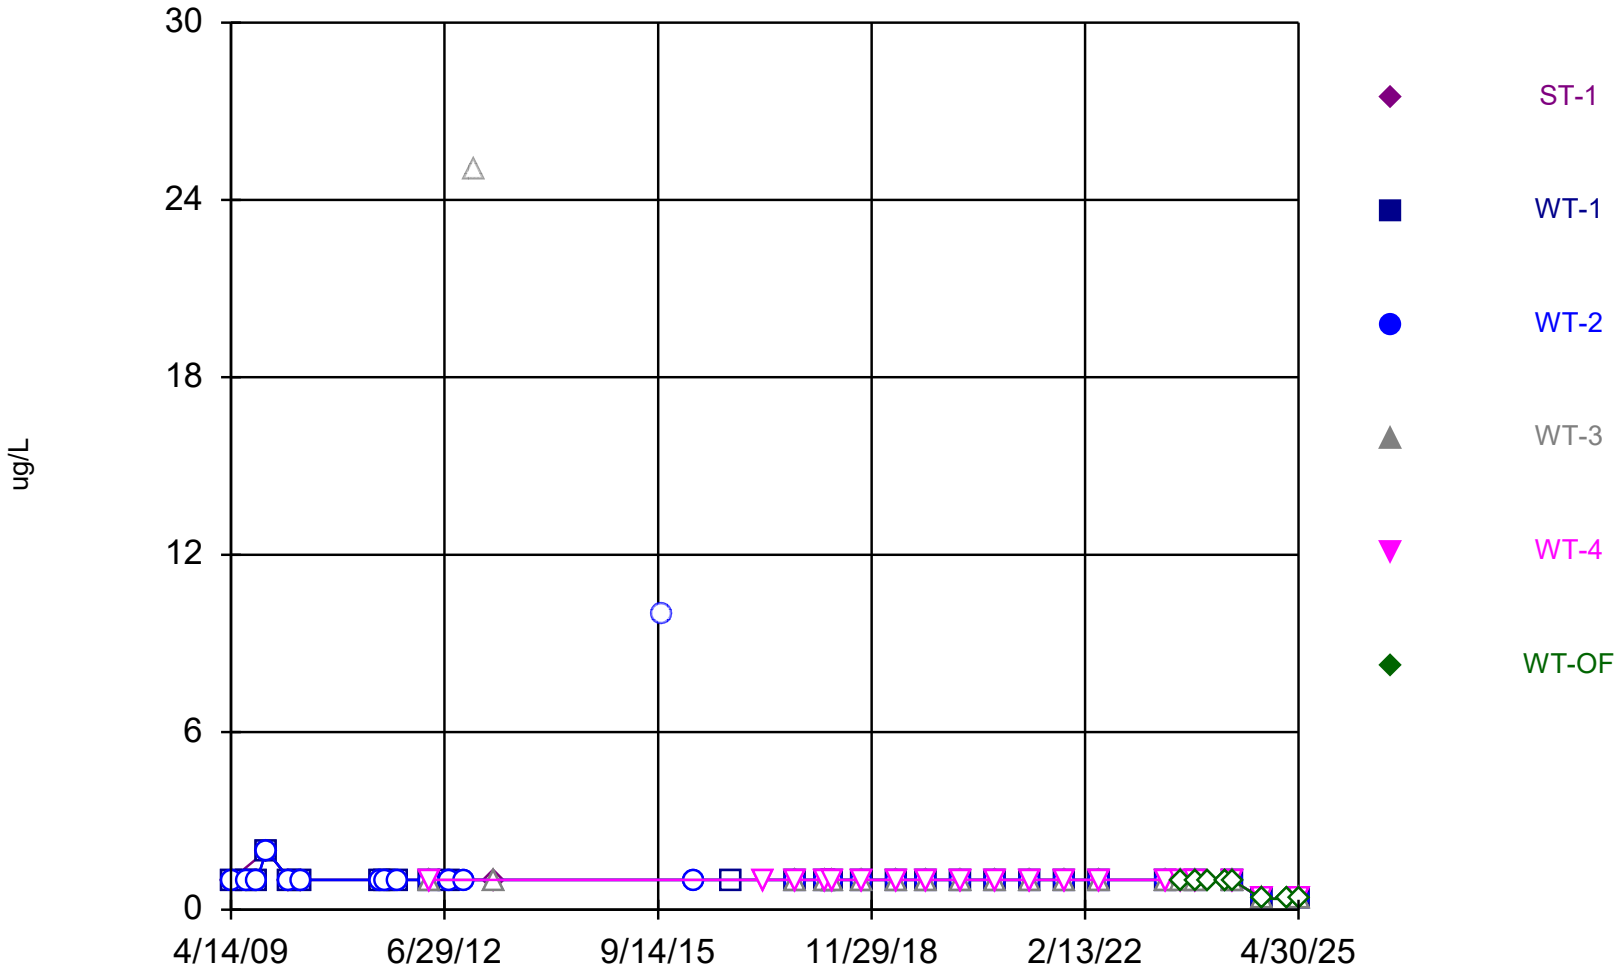


Constituent: 1,2-Dibromoethane [EDB] Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

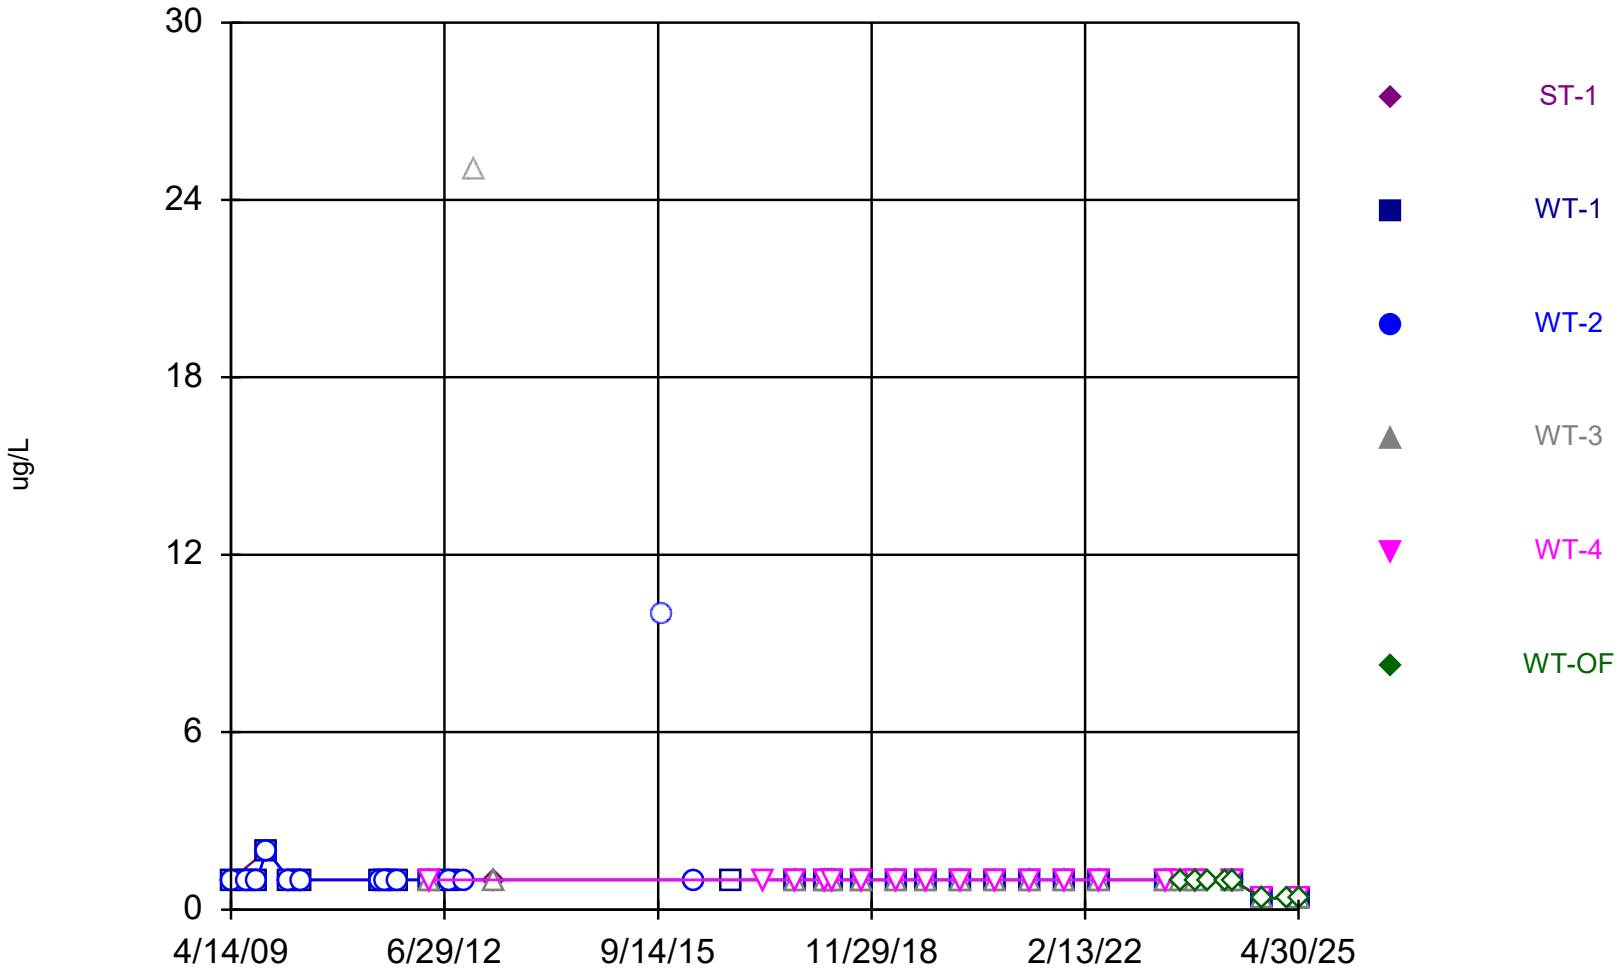


Constituent: 1,2-Dichlorobenzene Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

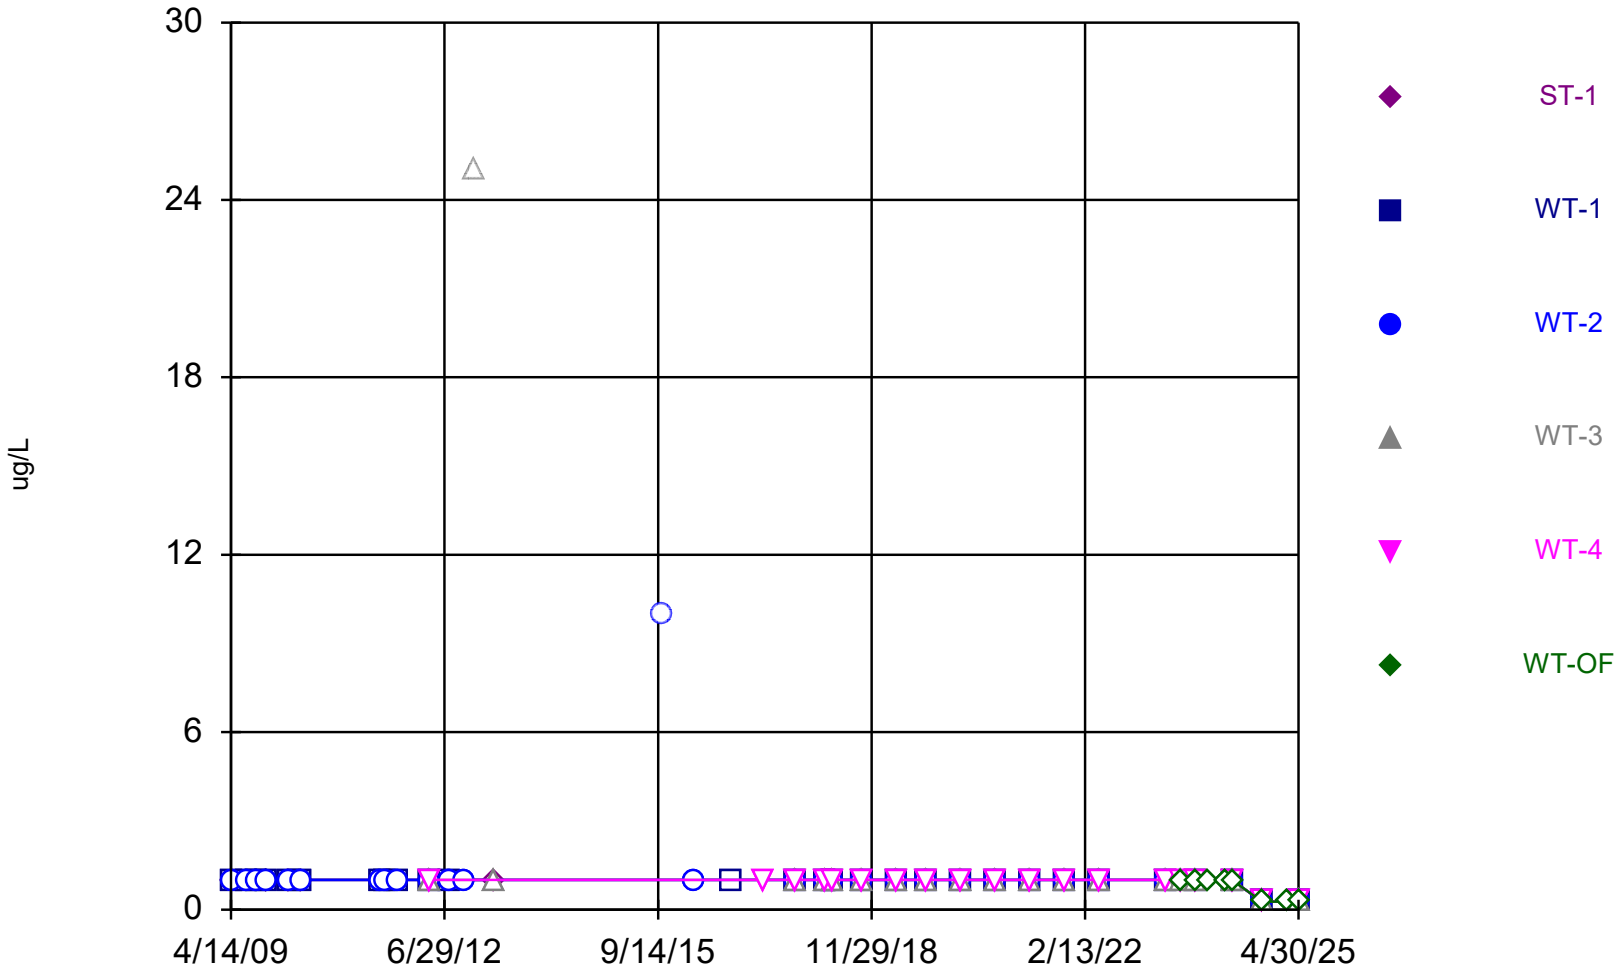


Constituent: 1,2-Dichloroethane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

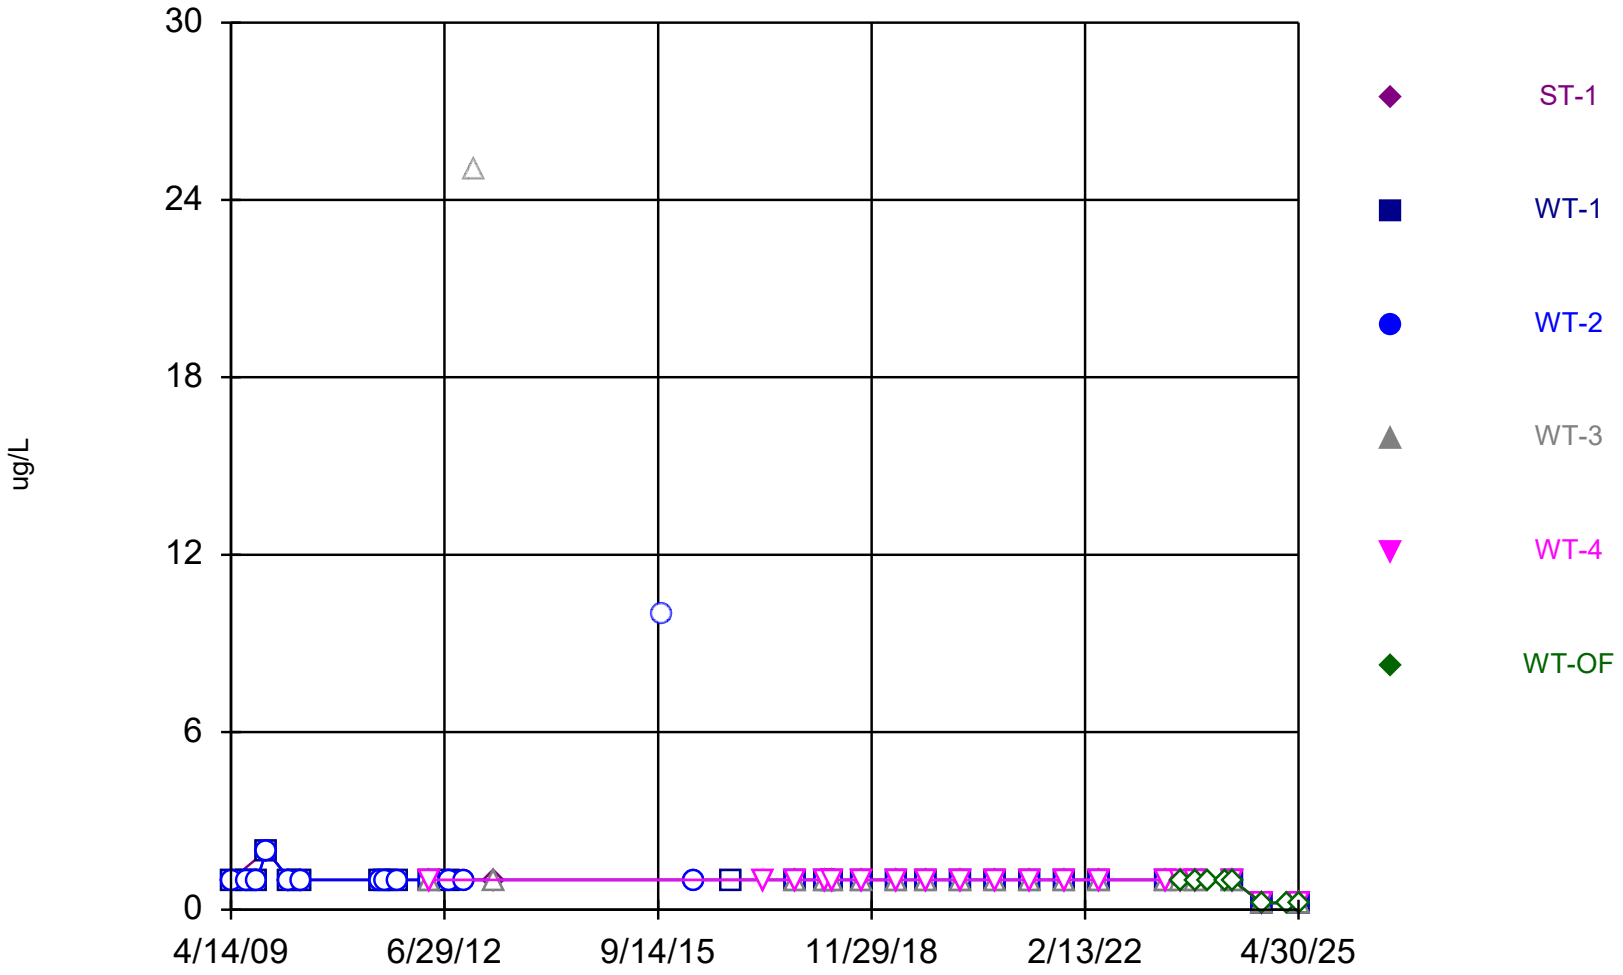


Constituent: 1,2-Dichloropropane Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

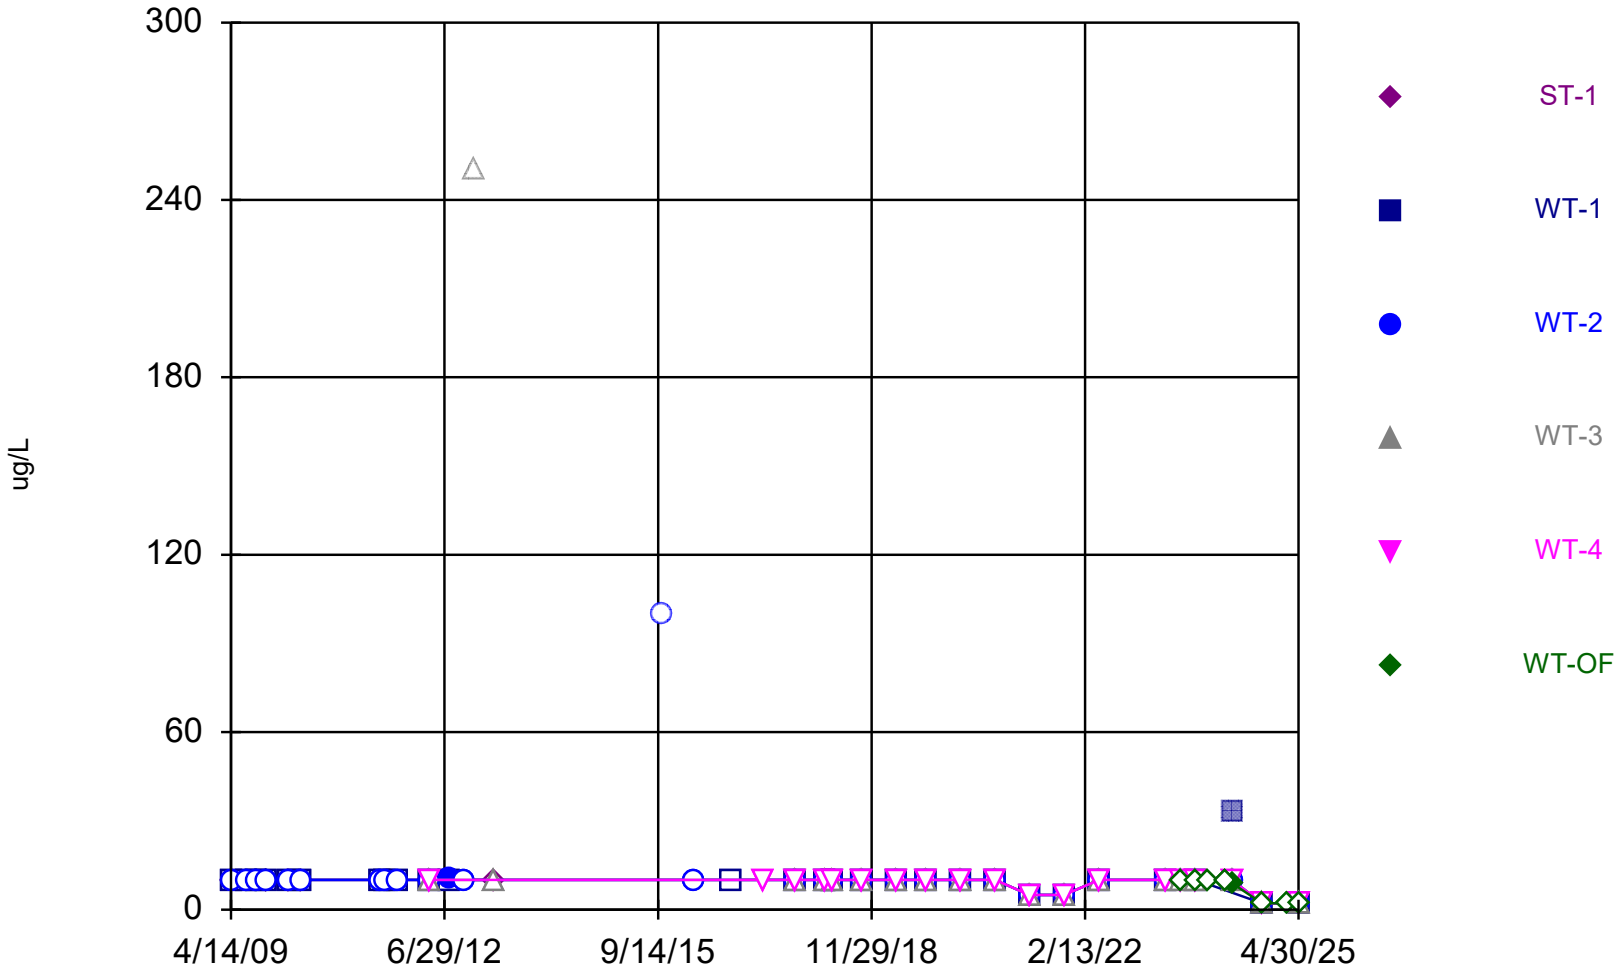


Constituent: 1,4-Dichlorobenzene Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

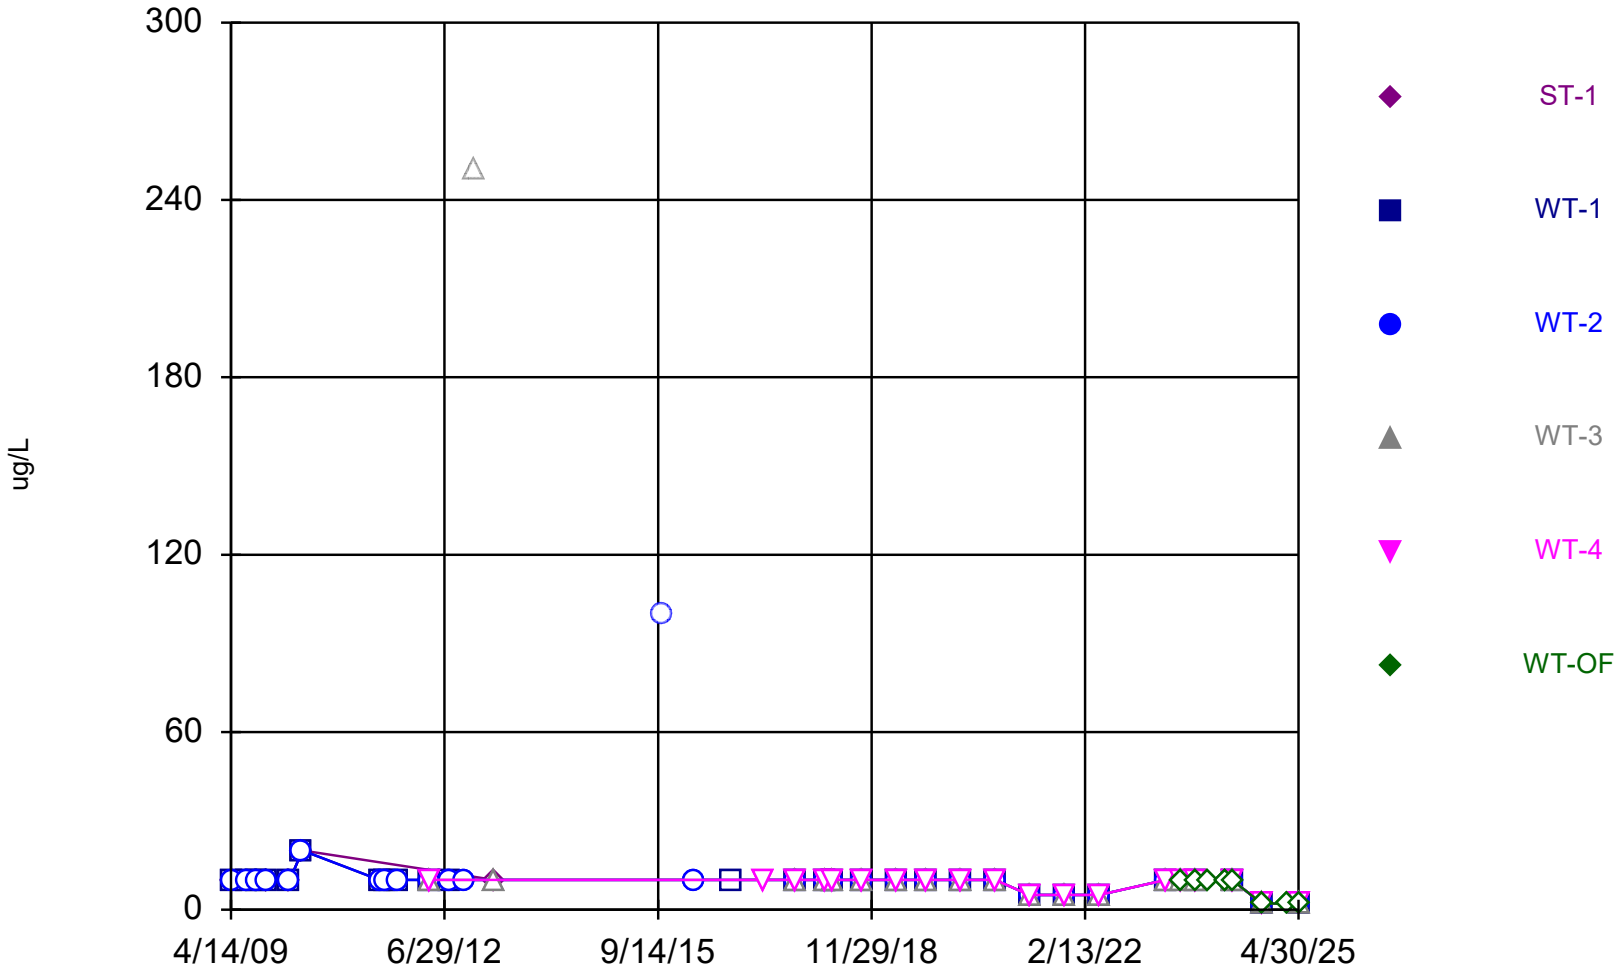


Constituent: 2-Butanone [MEK] Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

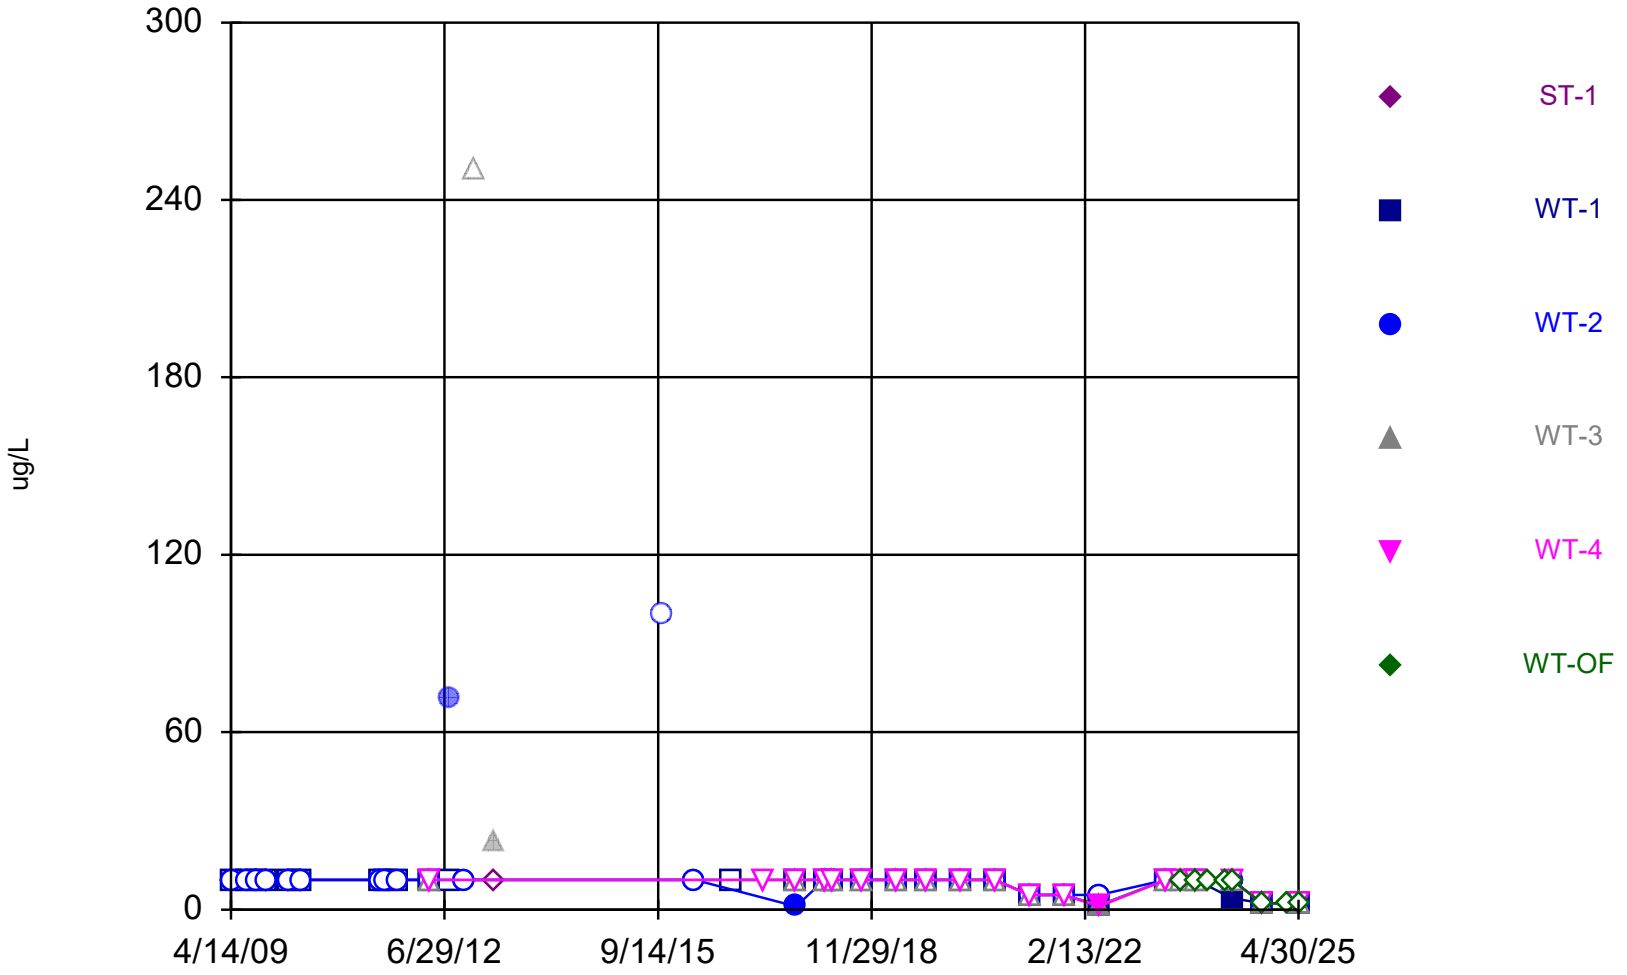


Constituent: 2-Hexanone Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

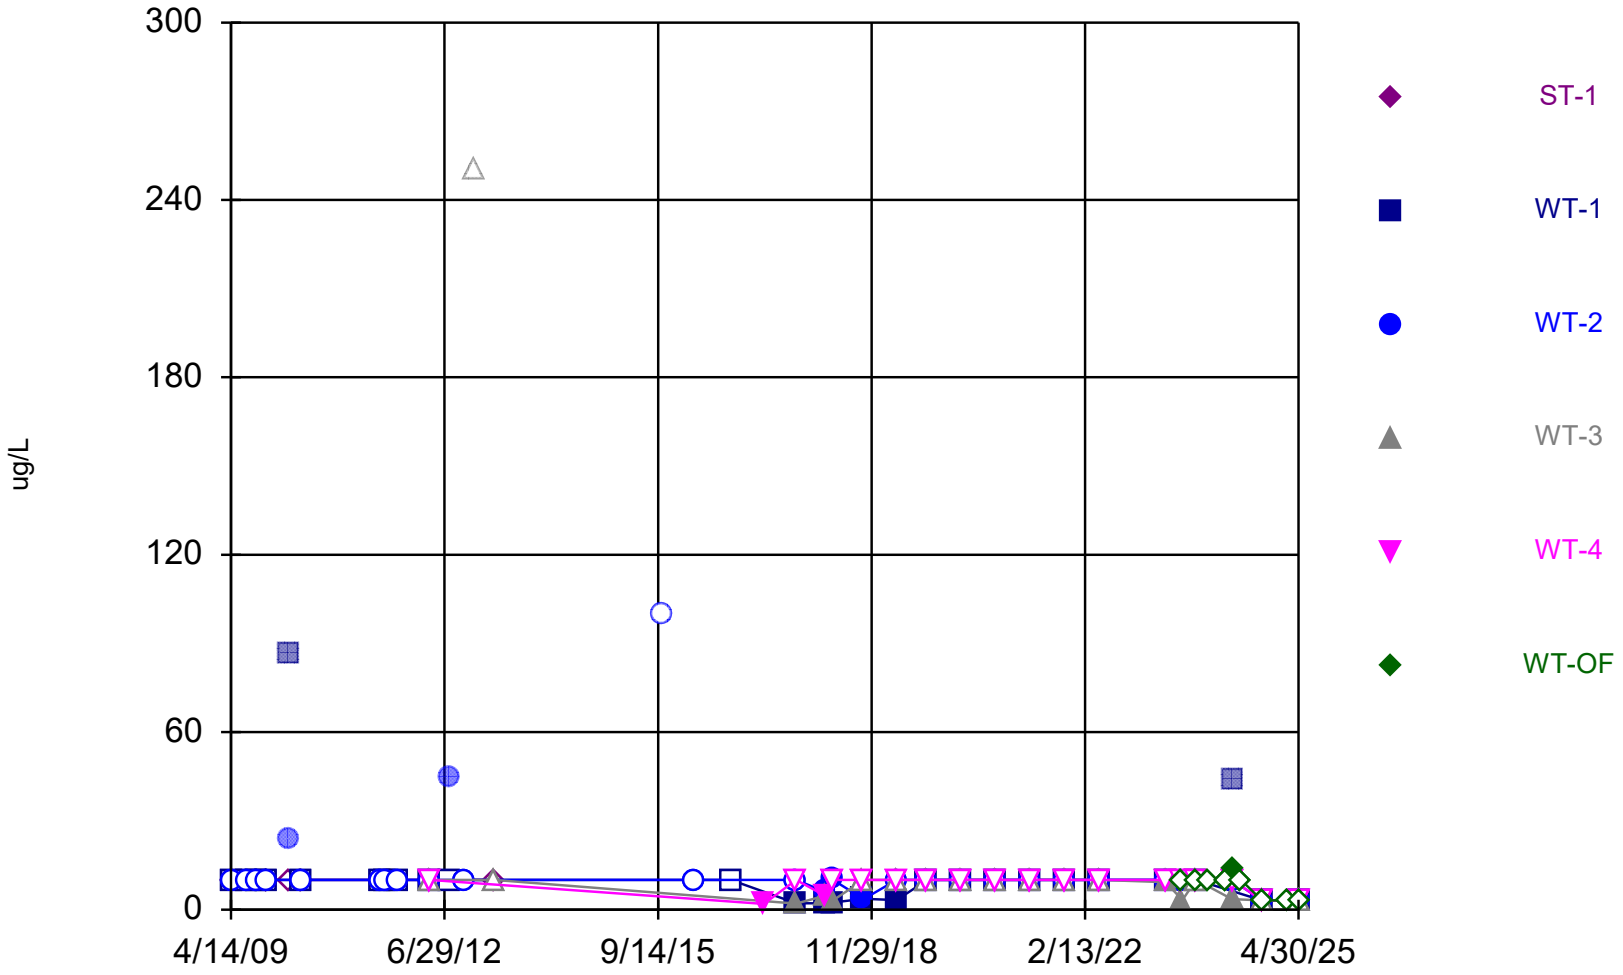


Constituent: 4-Methyl-2-pentanone [MIBK] Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

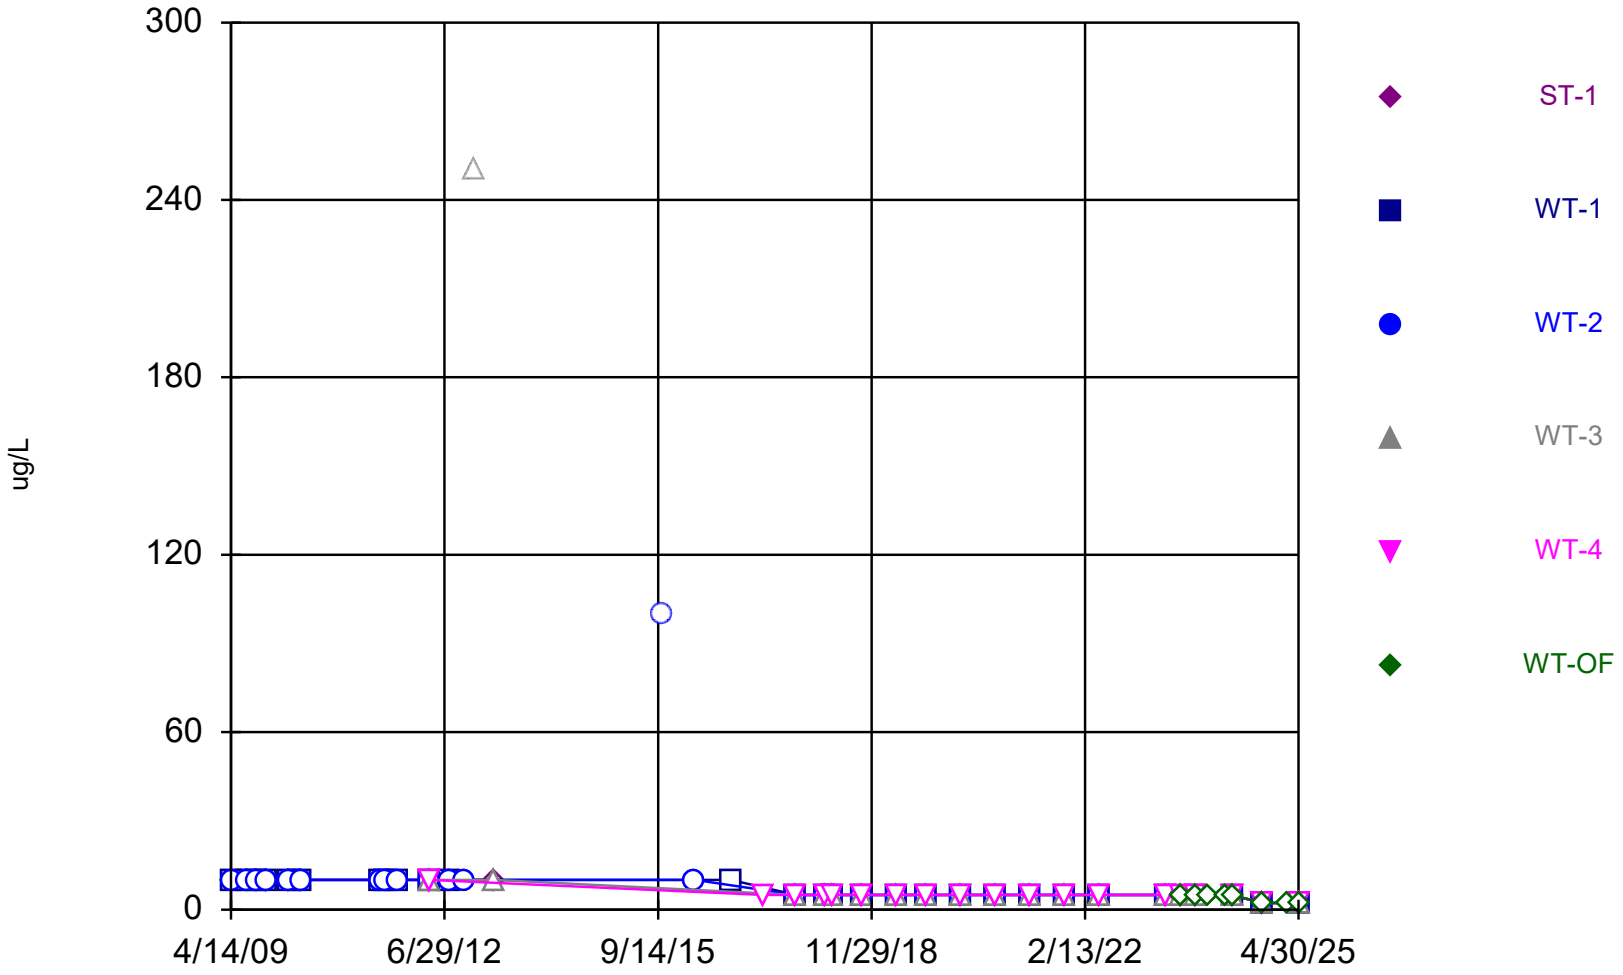


Constituent: Acetone Analysis Run 7/13/2025 10:34 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

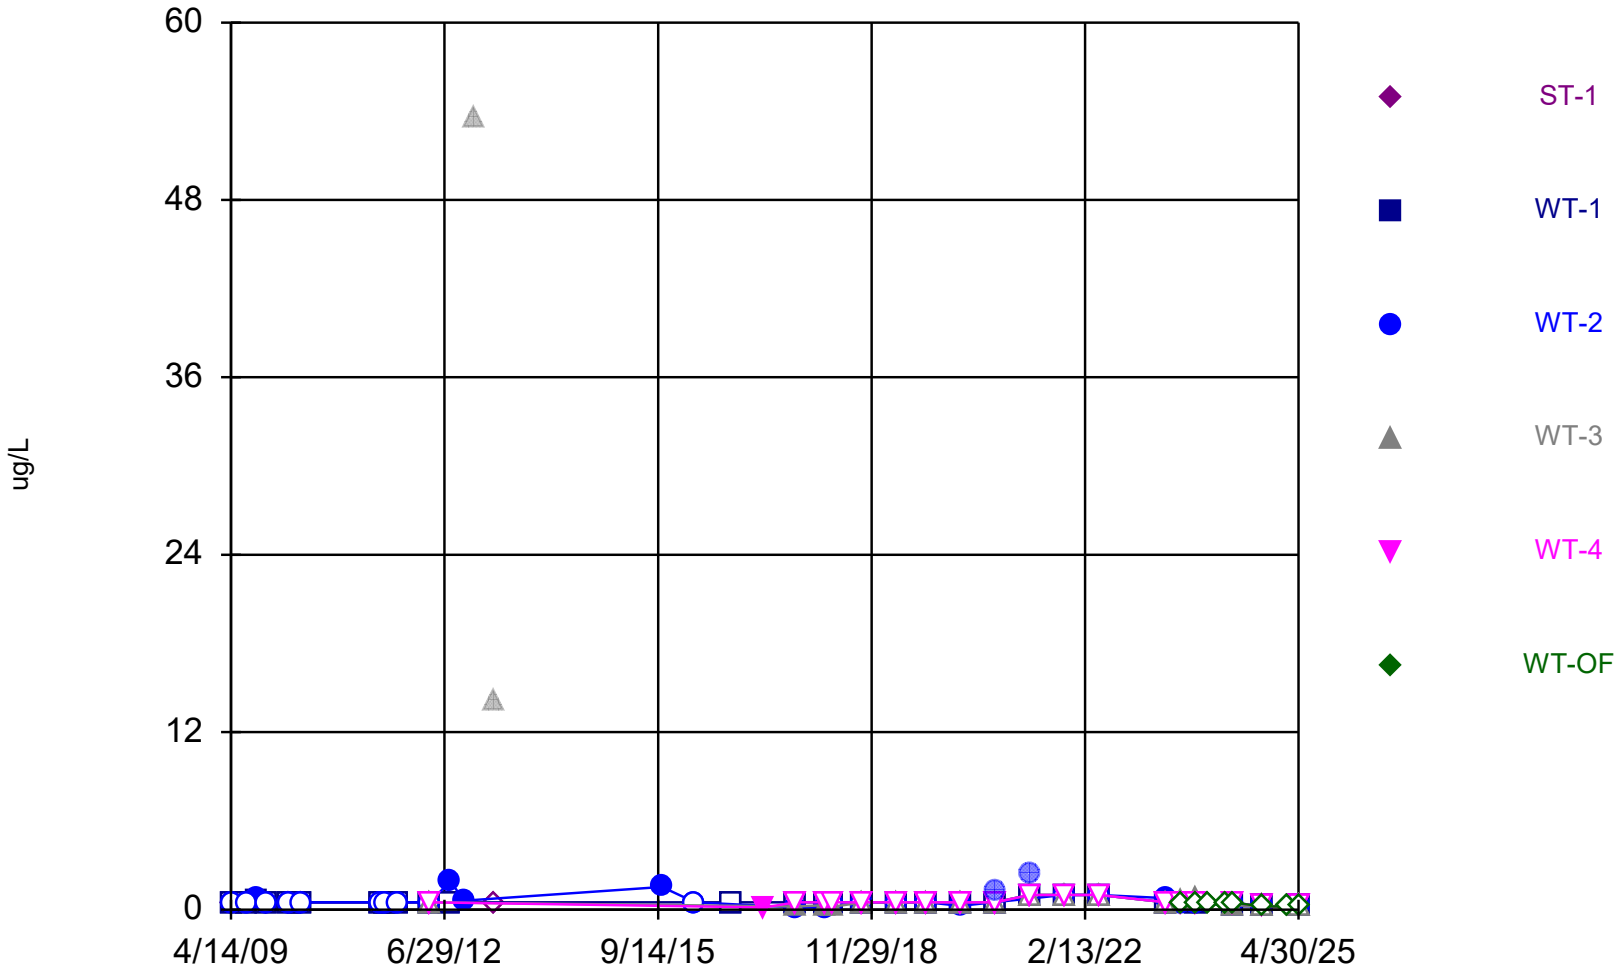


Constituent: Acrylonitrile Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

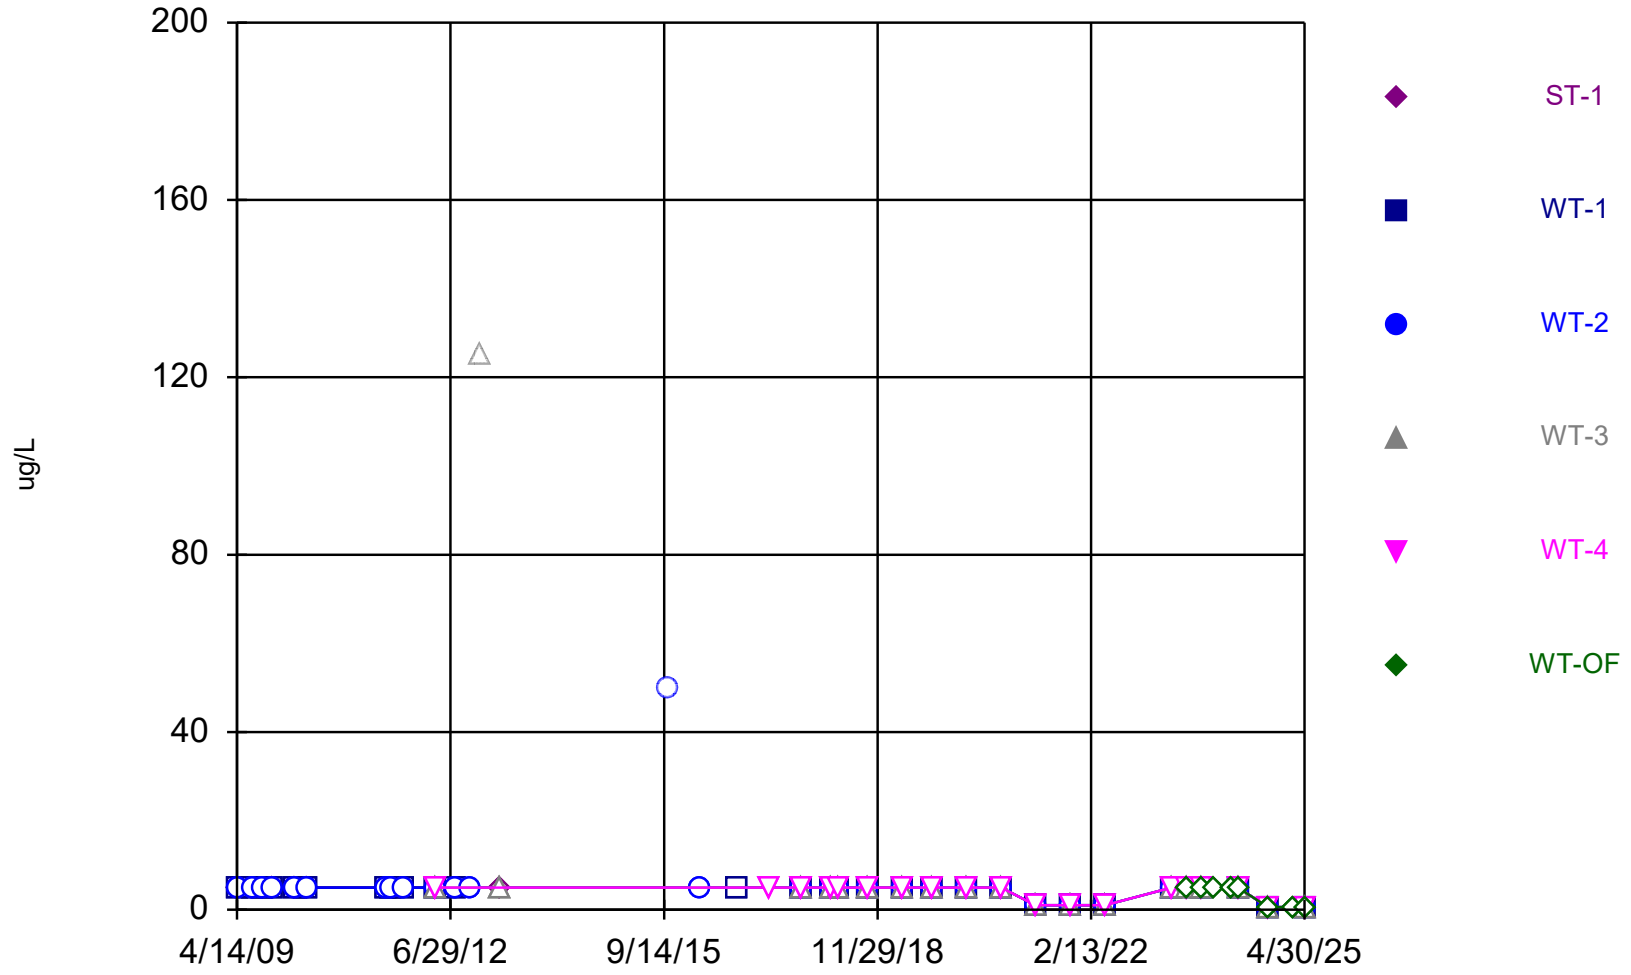


Constituent: Benzene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

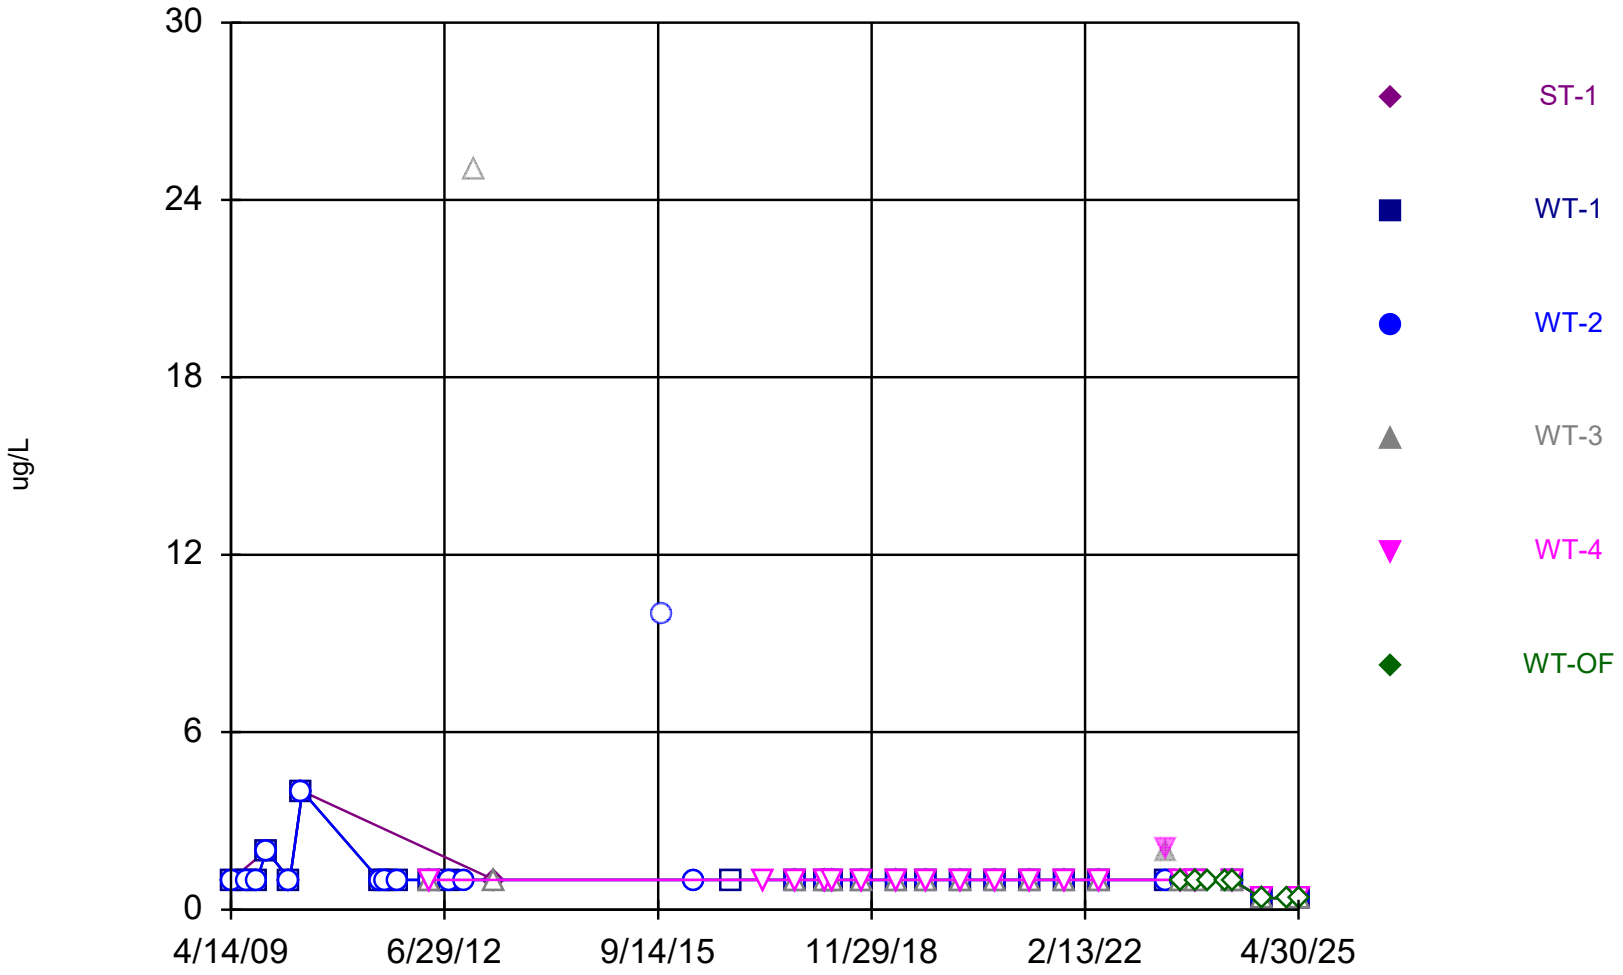


Constituent: Bromochloromethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

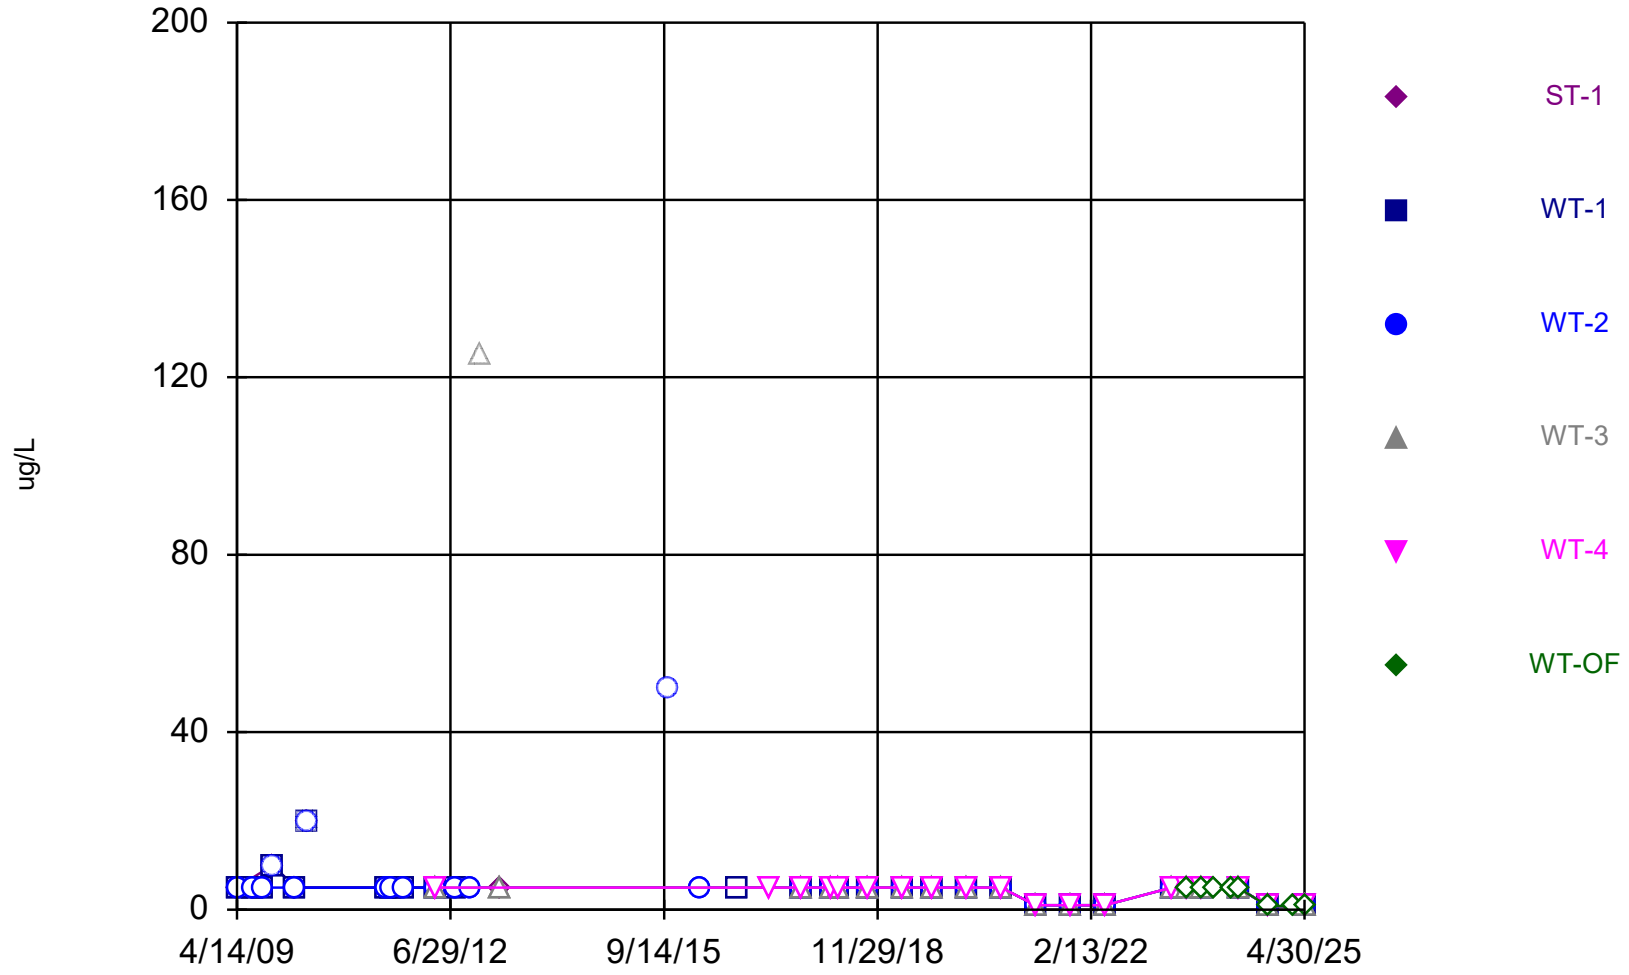


Constituent: Bromodichloromethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

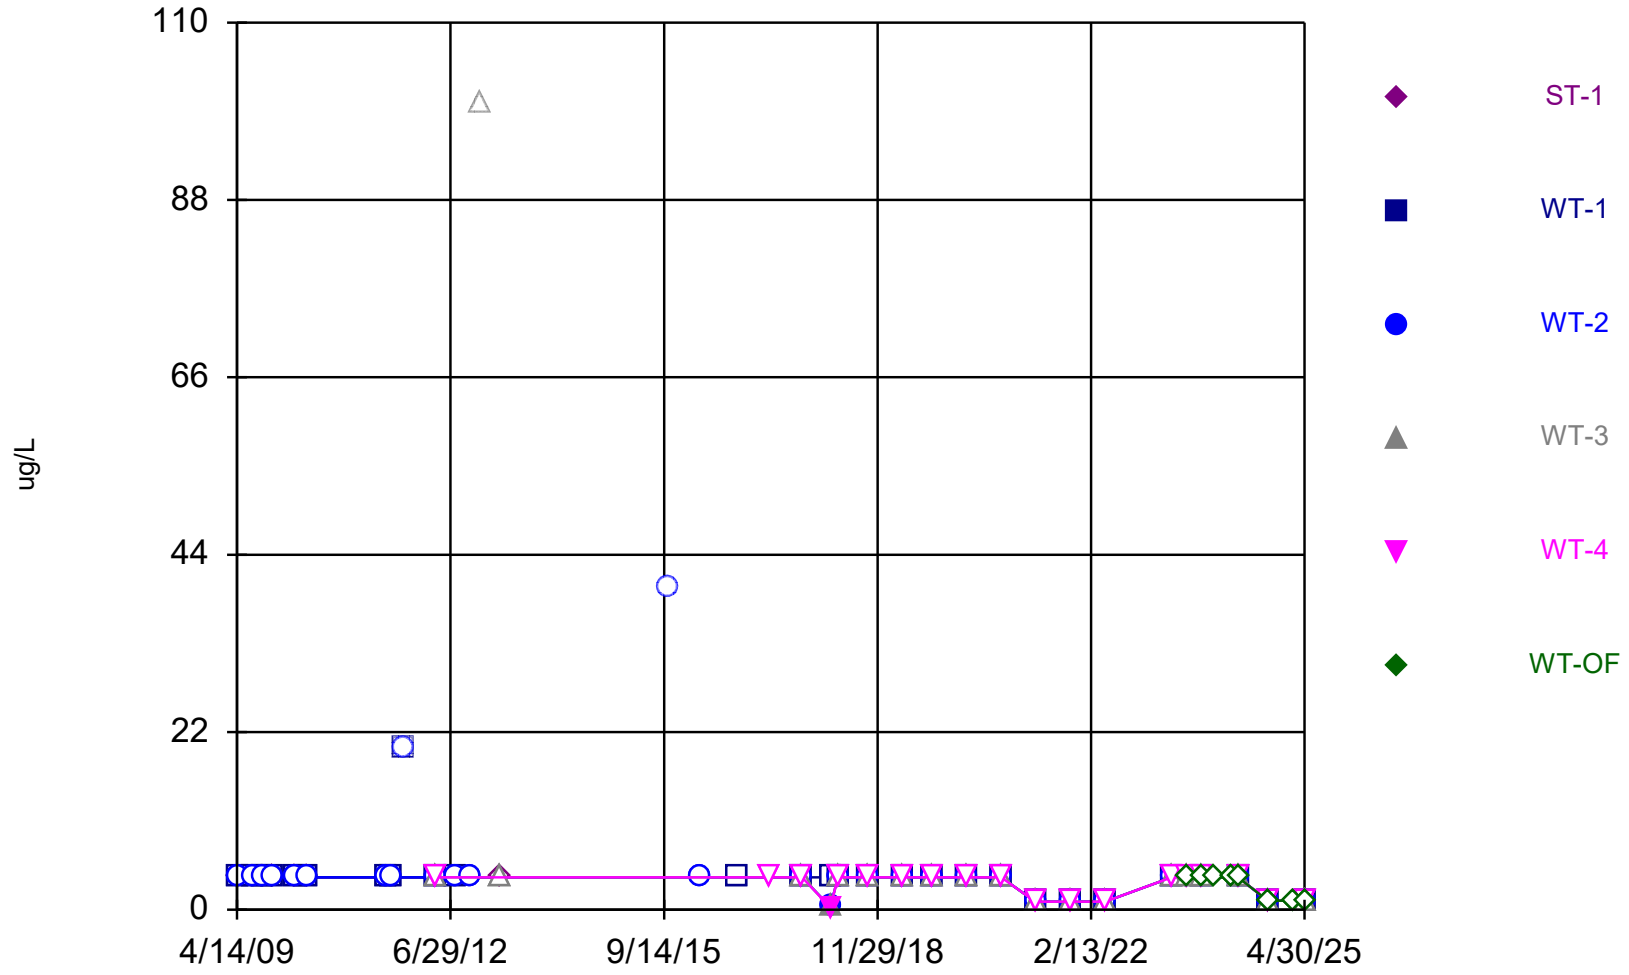


Constituent: Bromoform Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

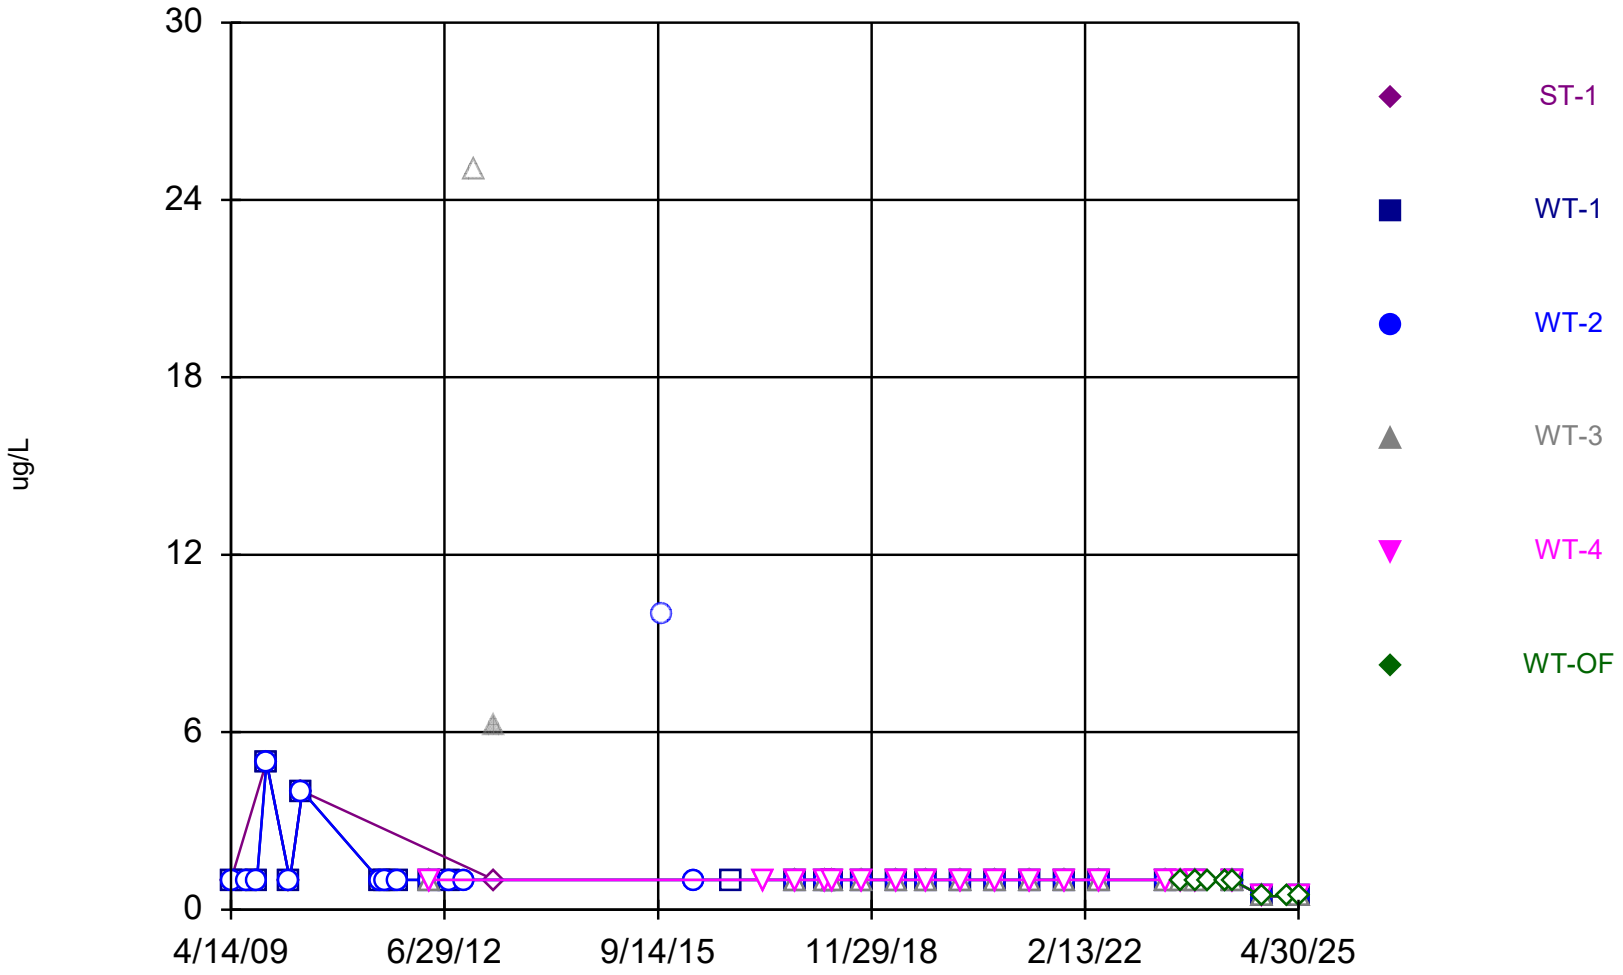


Constituent: Bromomethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

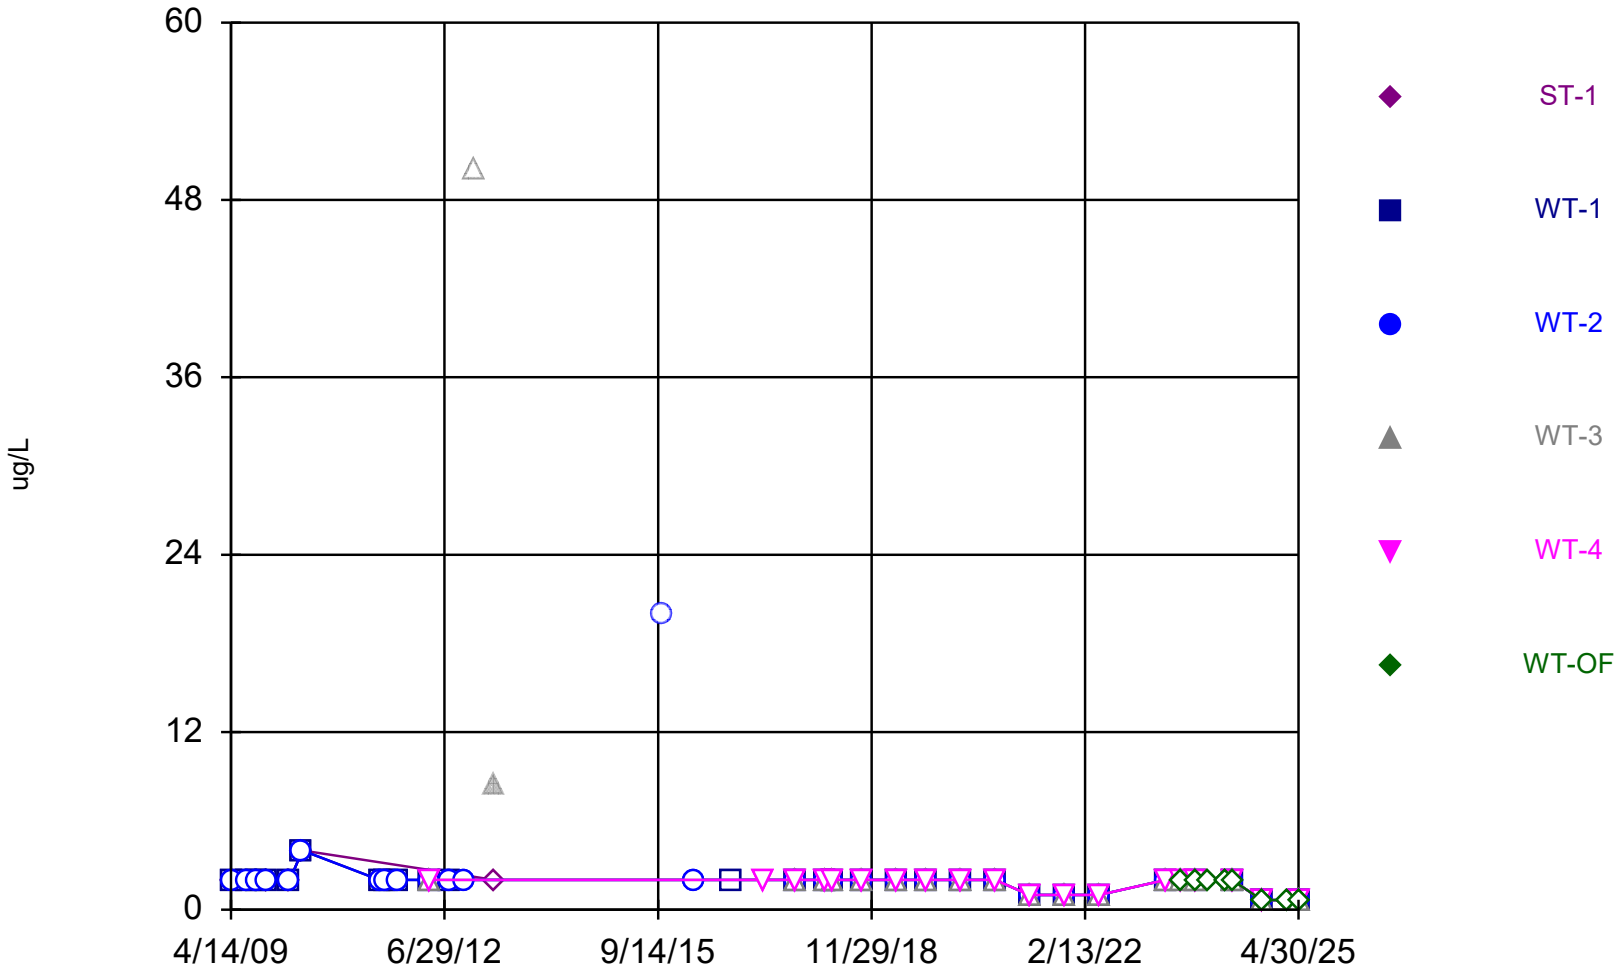


Constituent: Carbon Disulfide Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

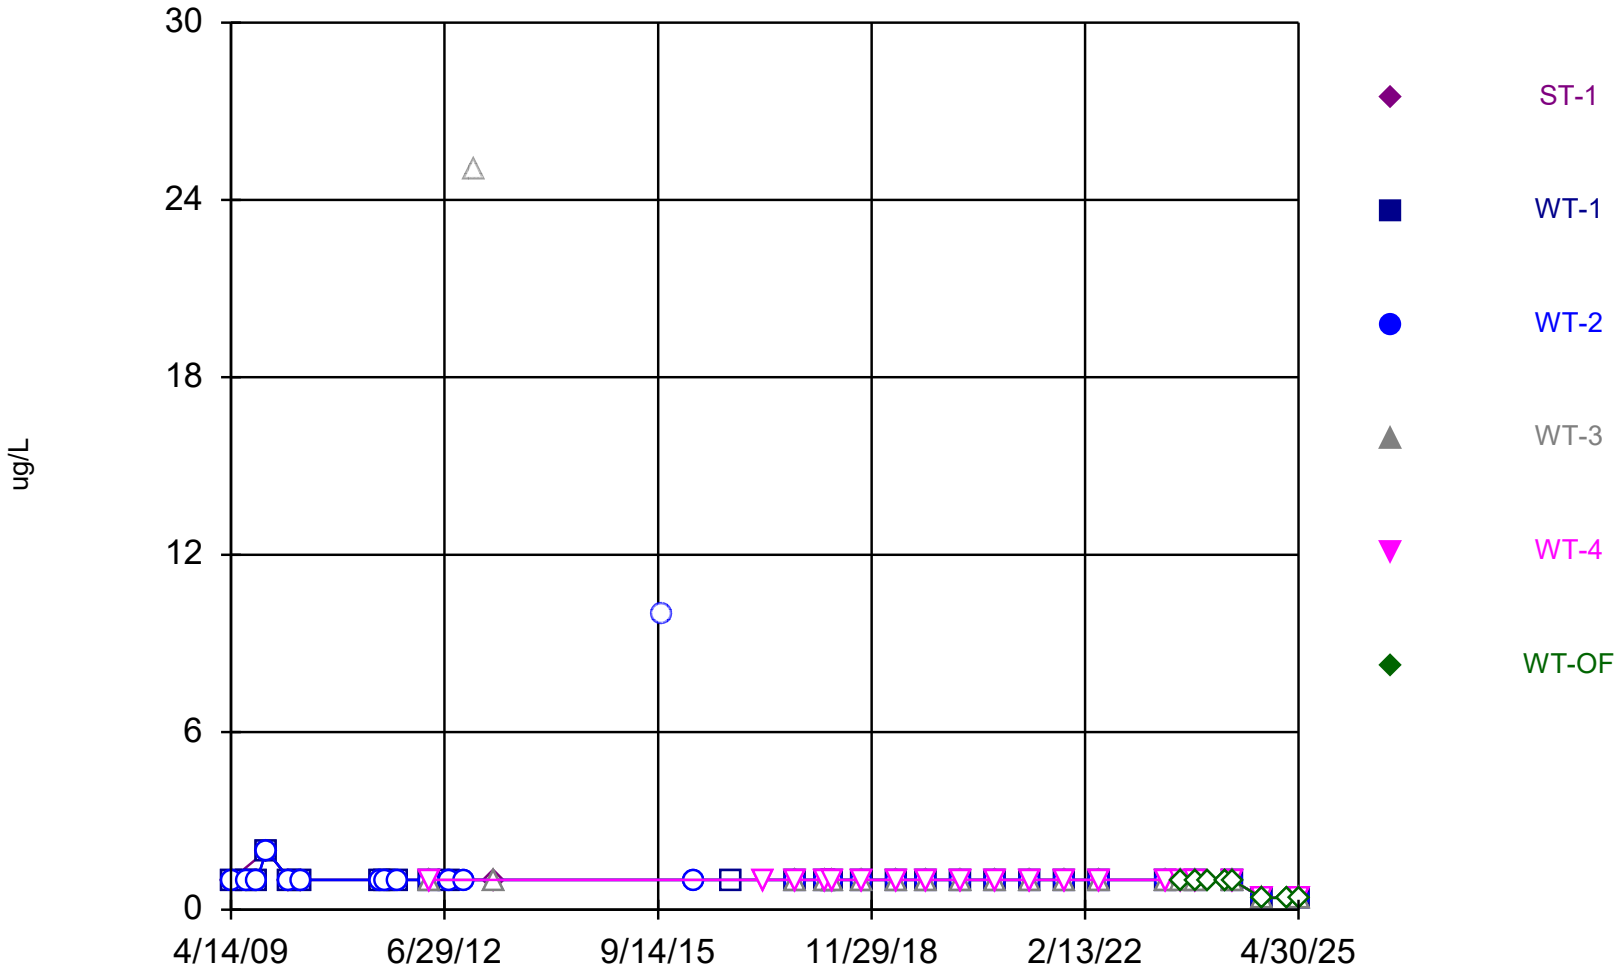


Constituent: Carbon Tetrachloride Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

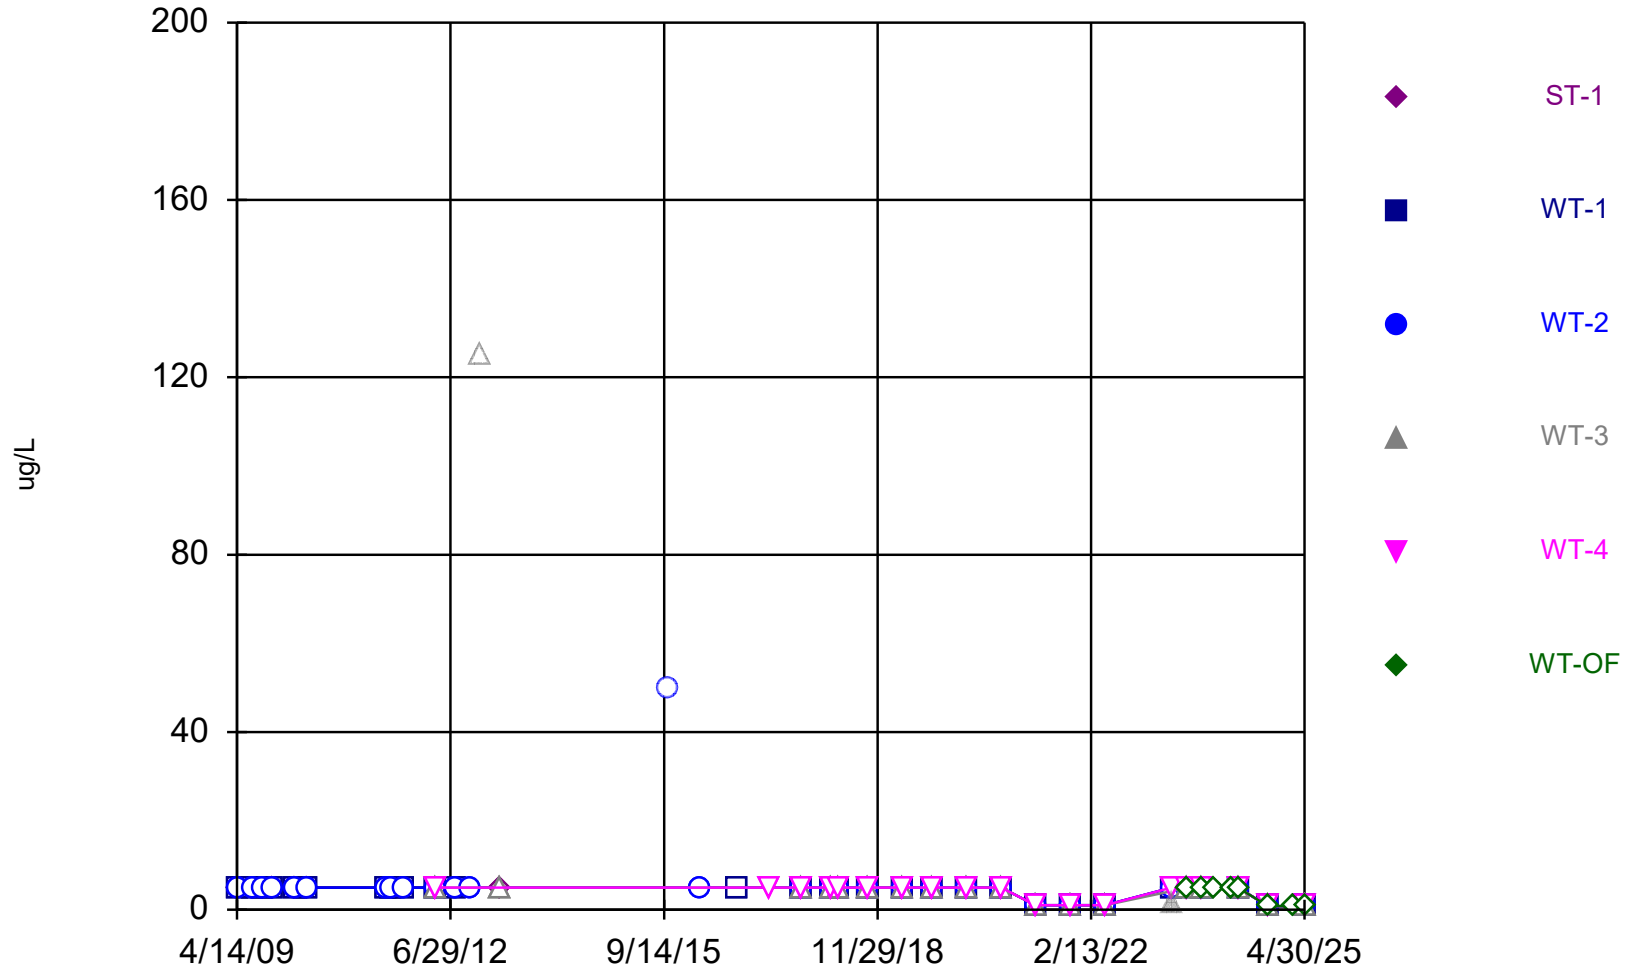


Constituent: Chlorobenzene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

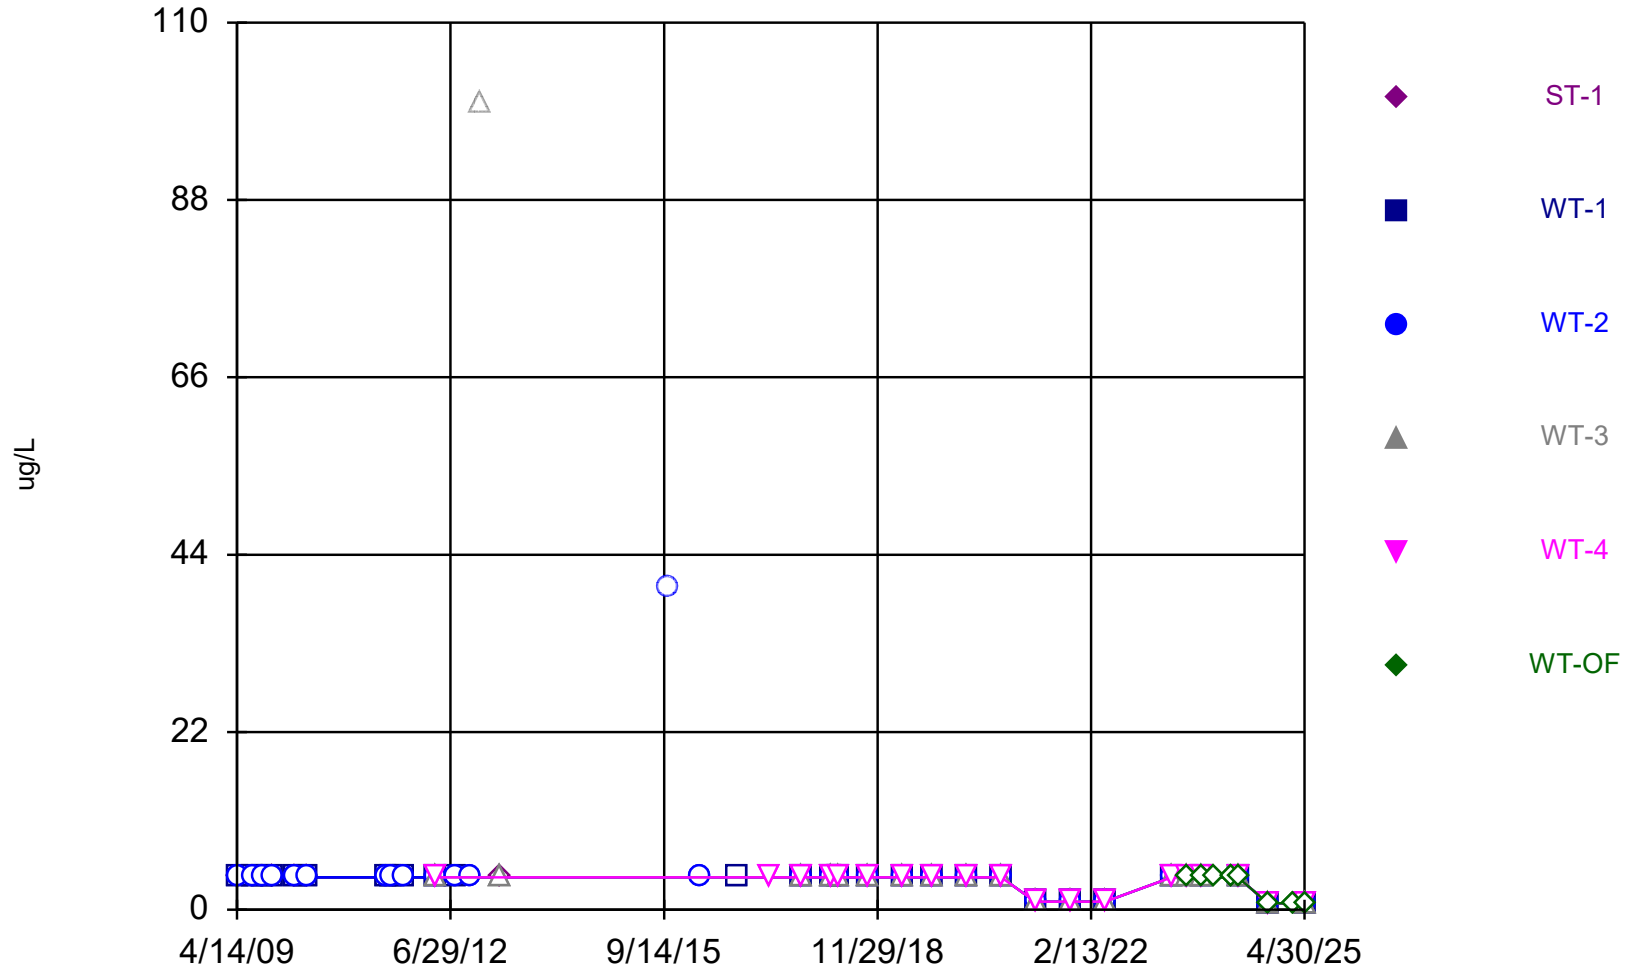


Constituent: Chlorodibromomethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

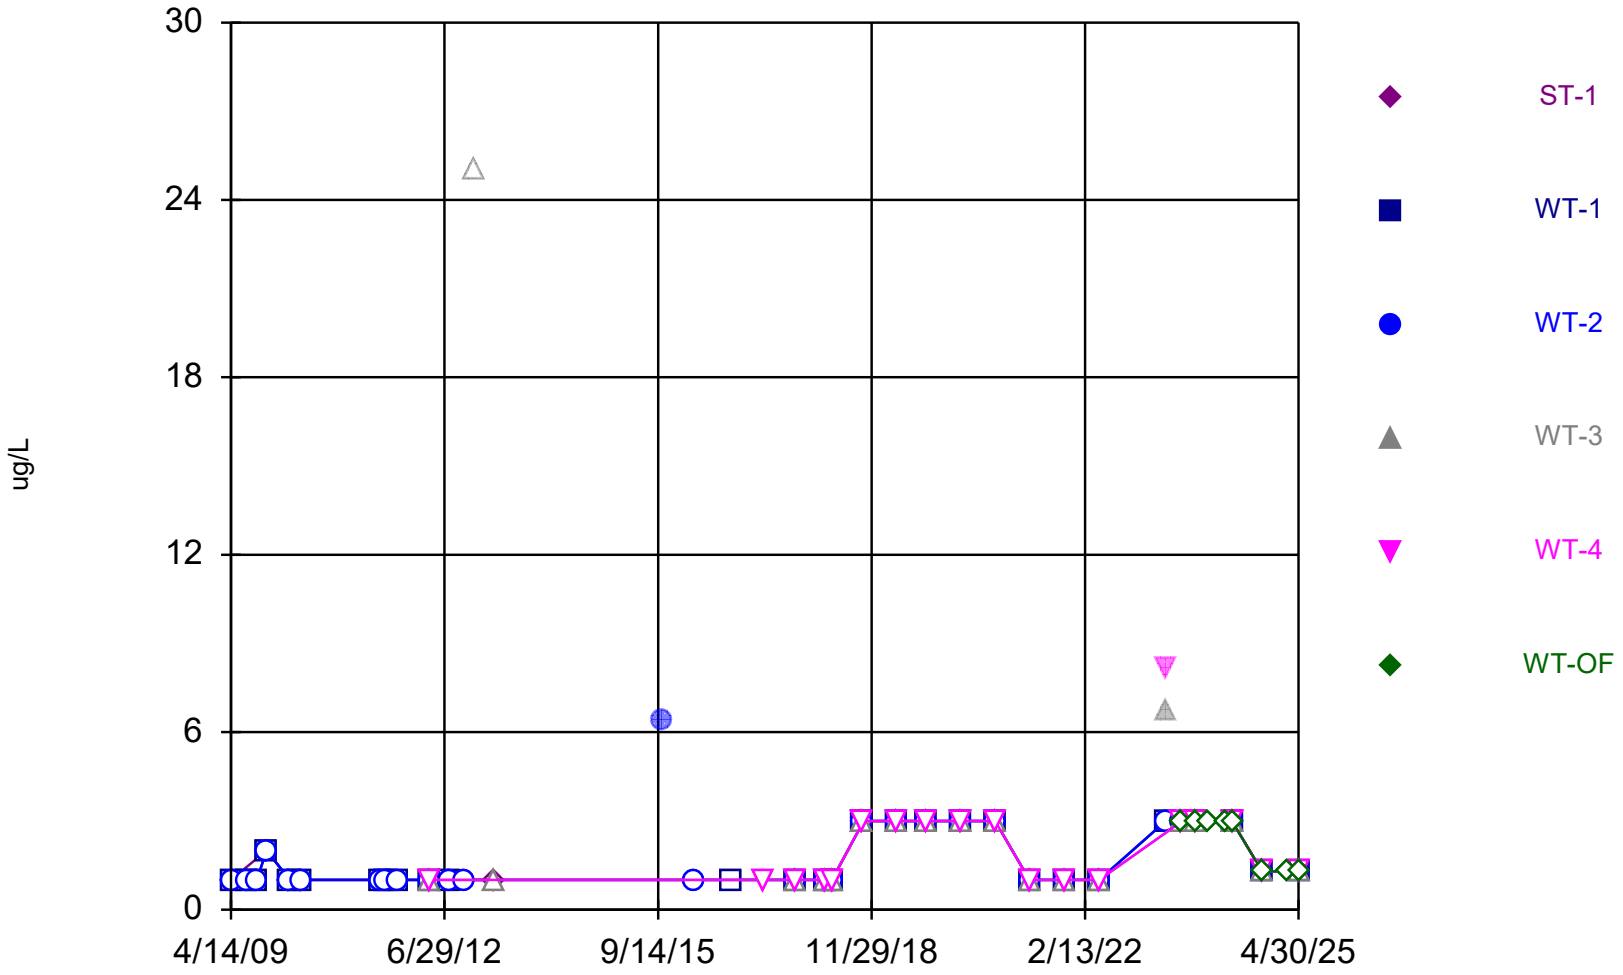


Constituent: Chloroethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

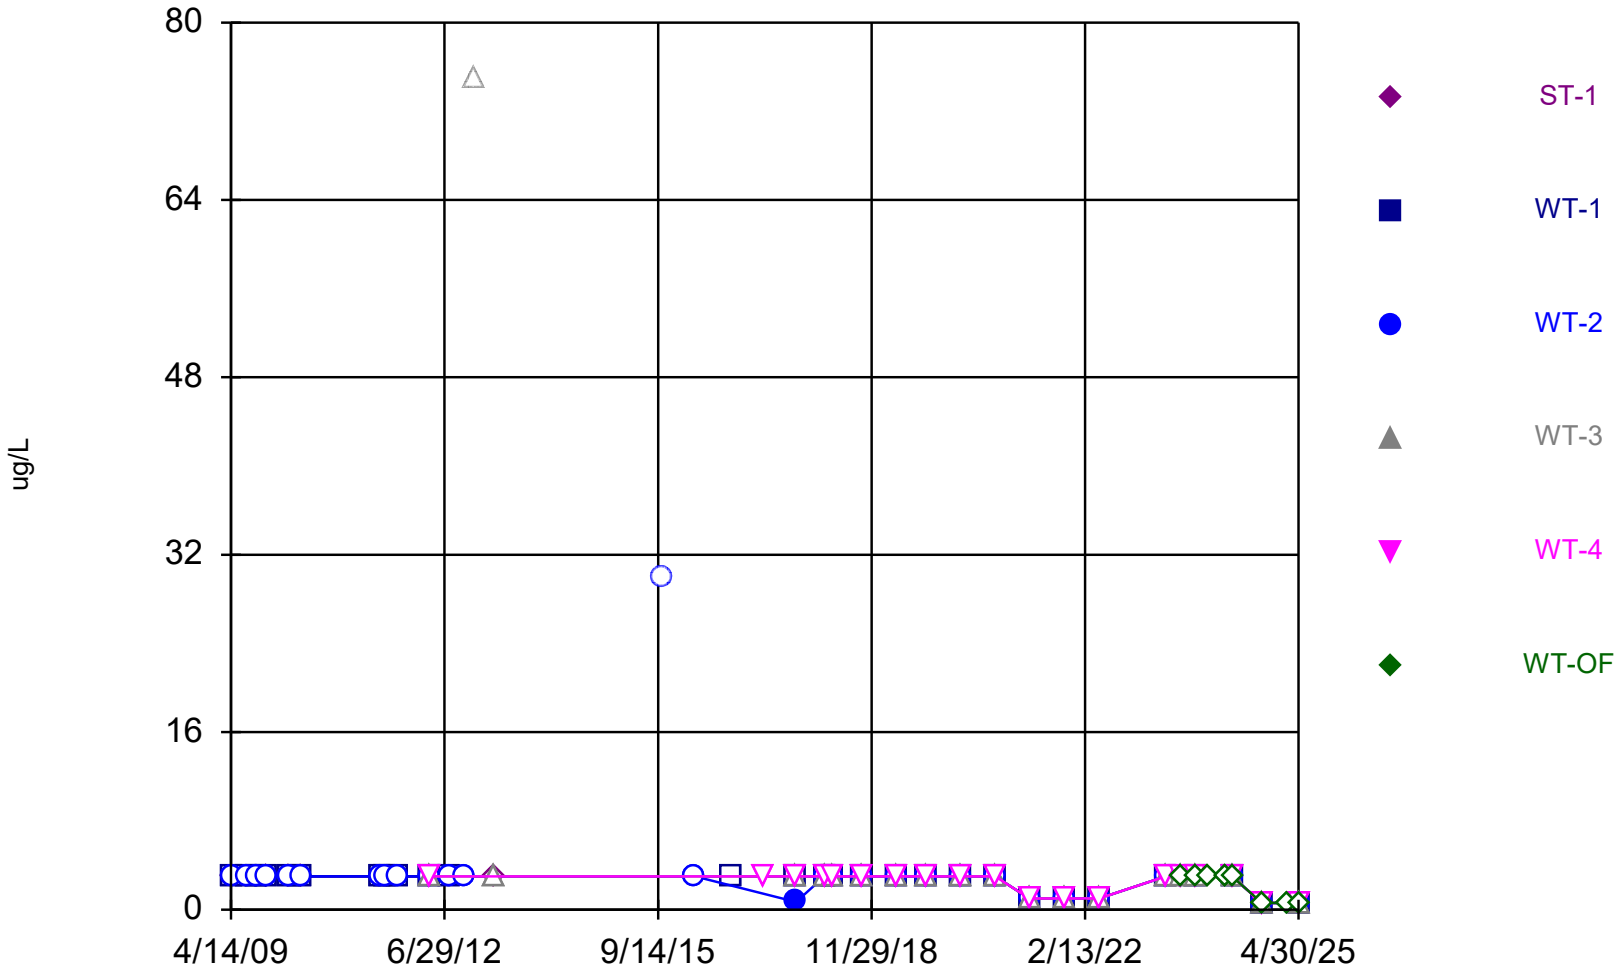


Constituent: Chloroform Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

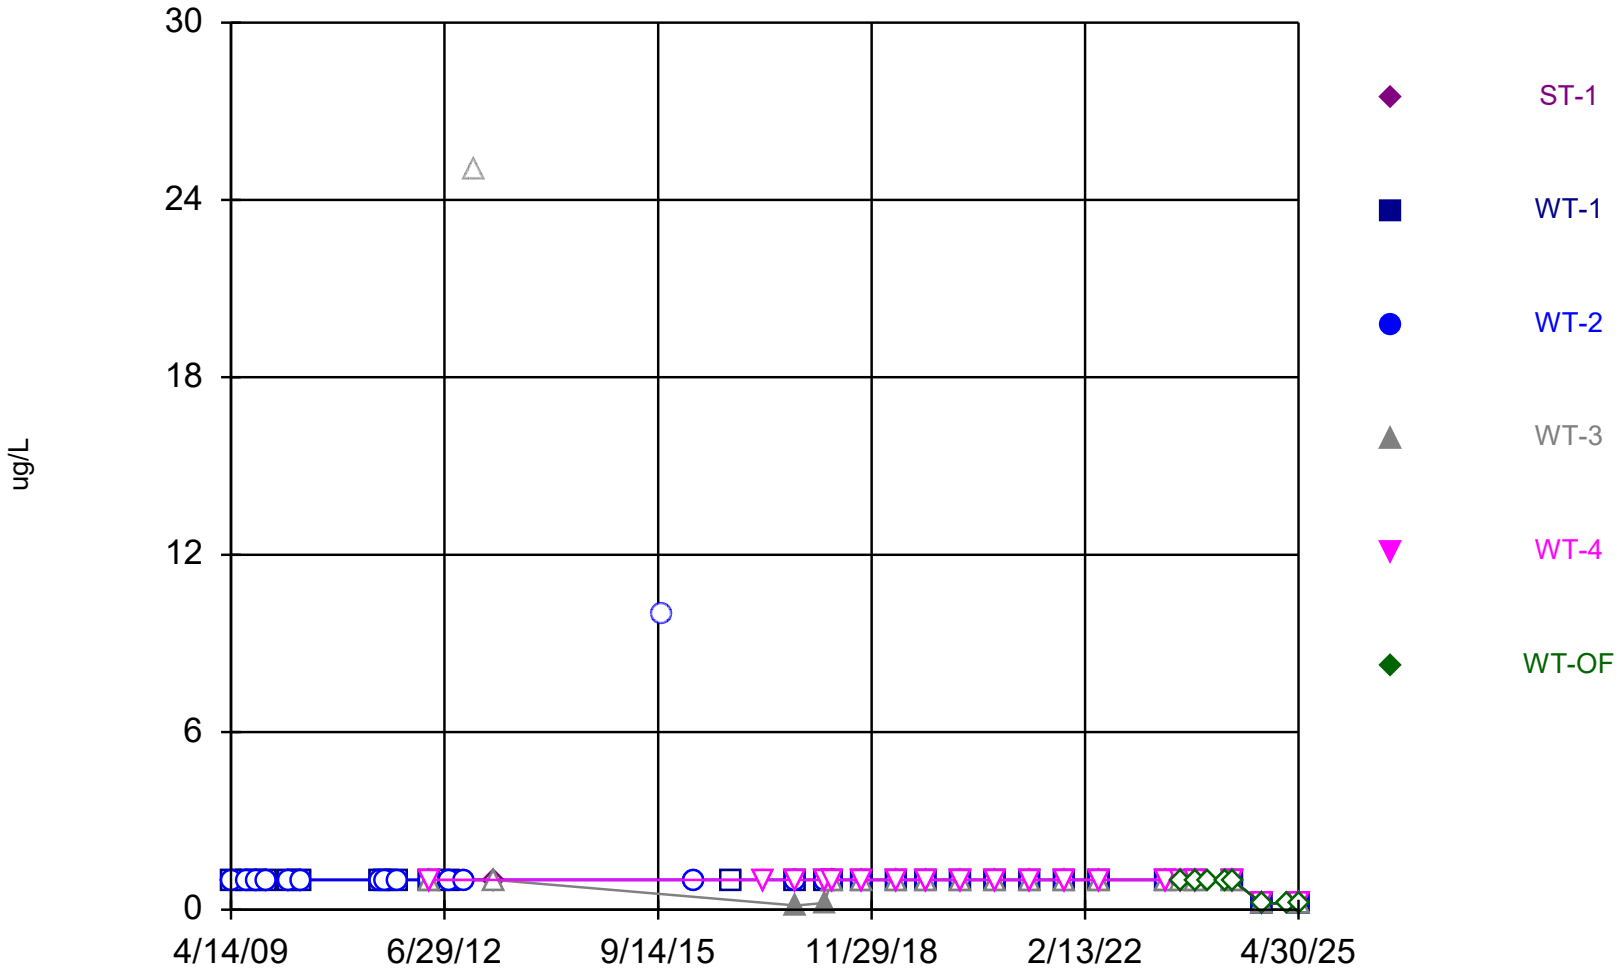


Constituent: Chloromethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

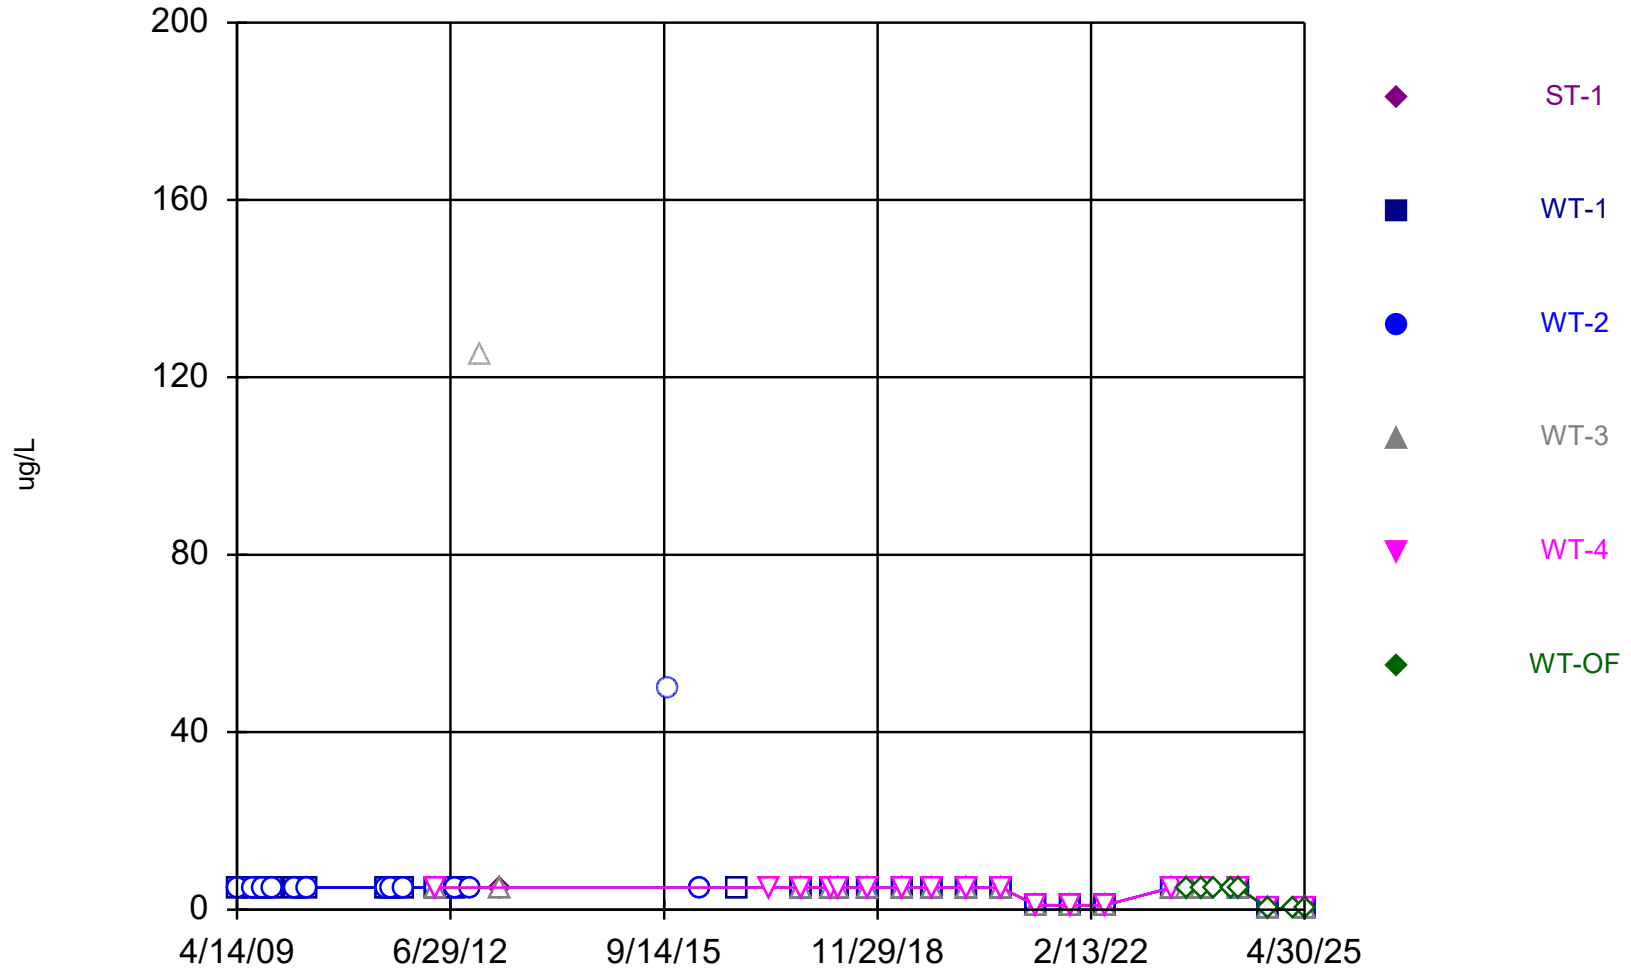


Constituent: cis-1,2-Dichloroethene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

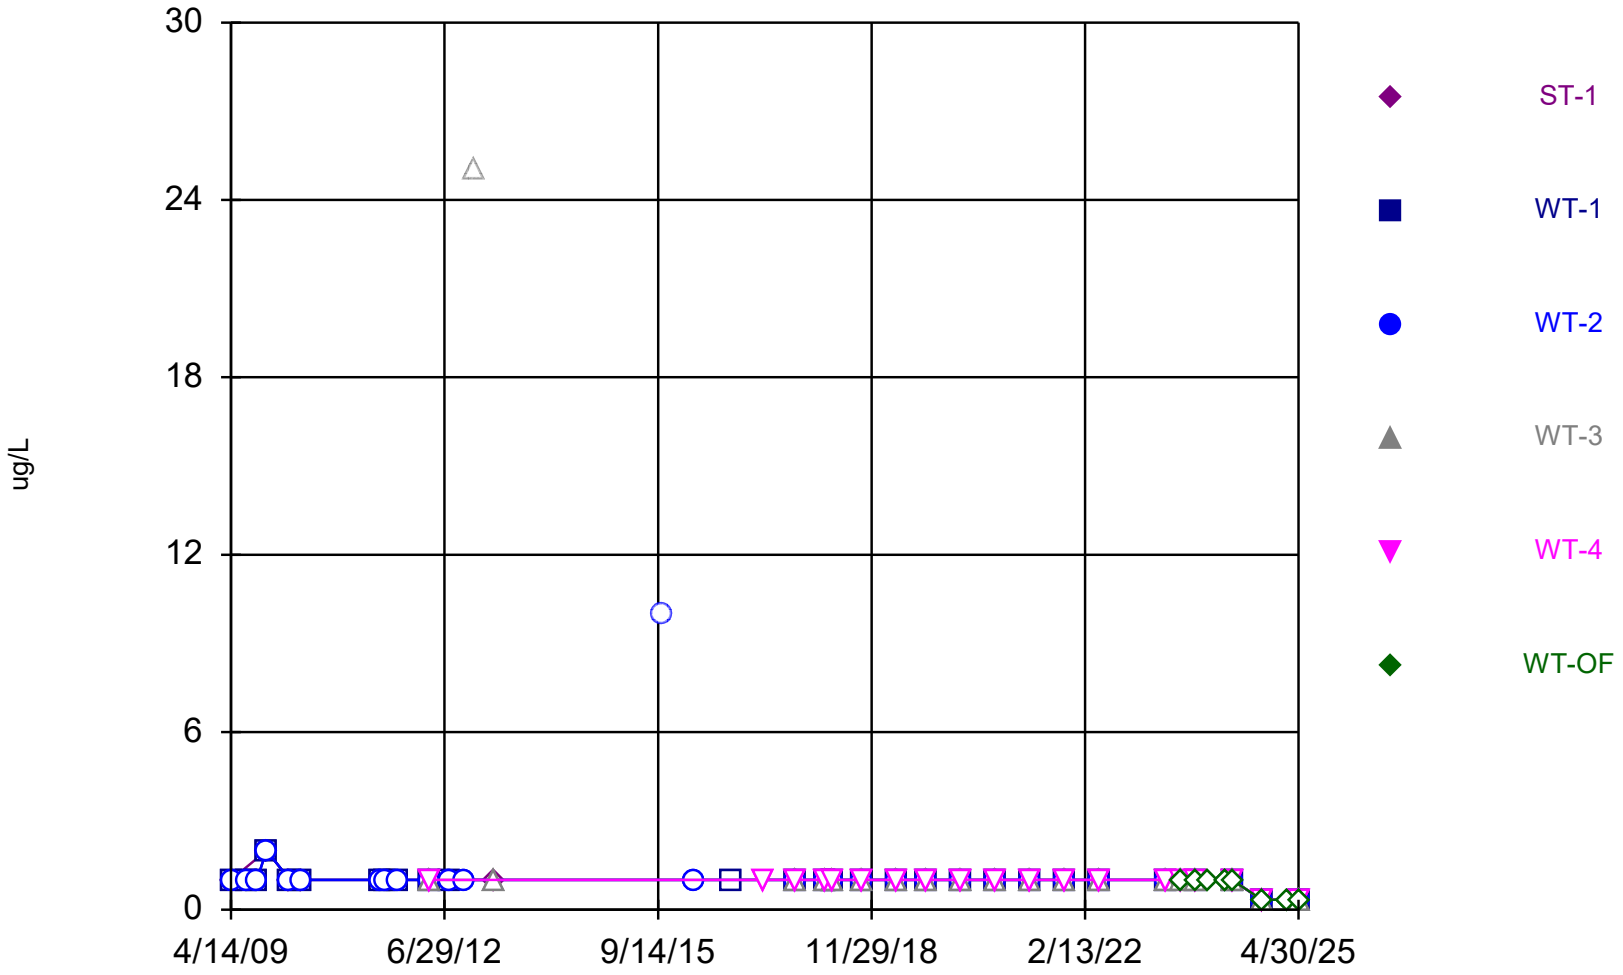


Constituent: cis-1,3-Dichloropropene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

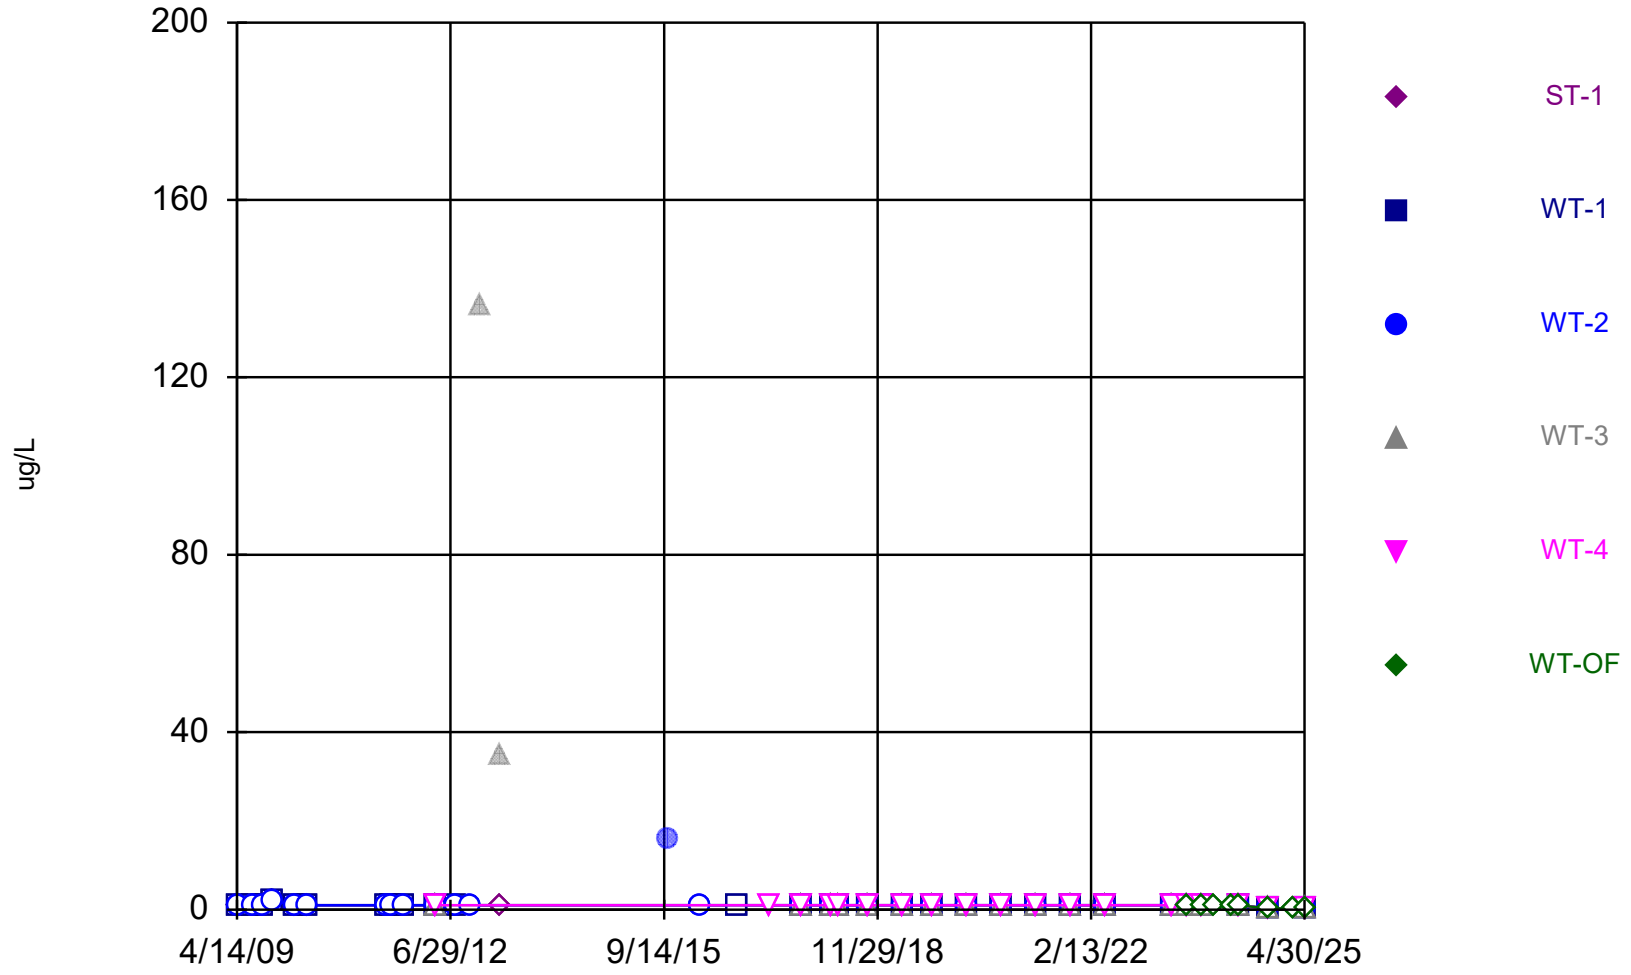


Constituent: Dibromomethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

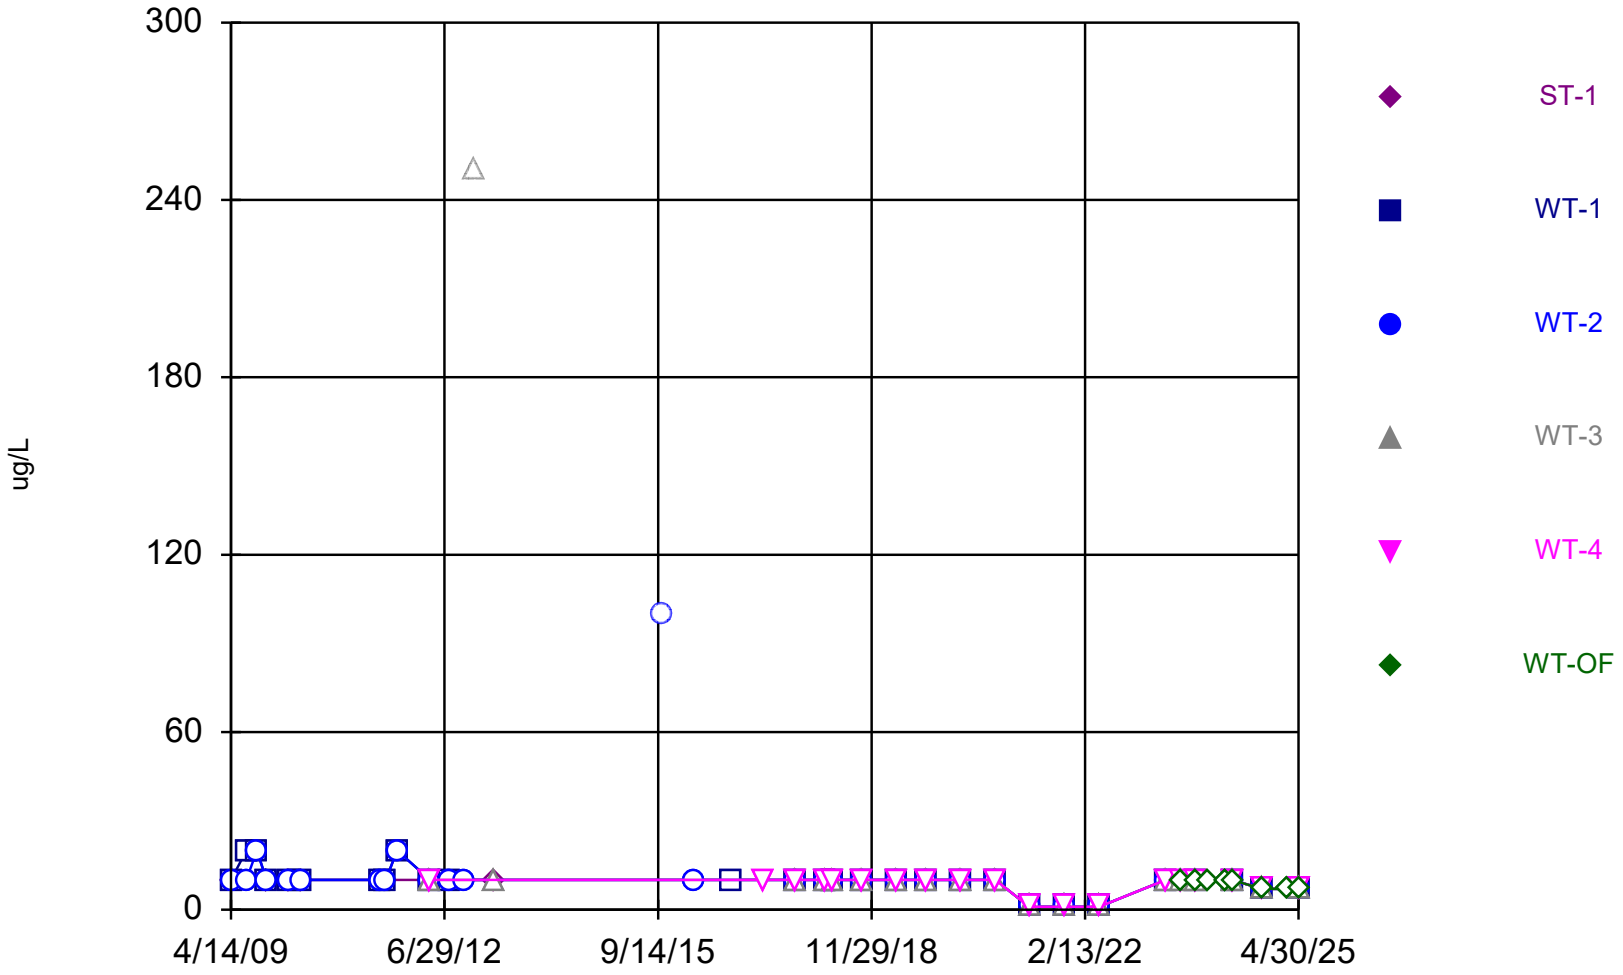


Constituent: Ethylbenzene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

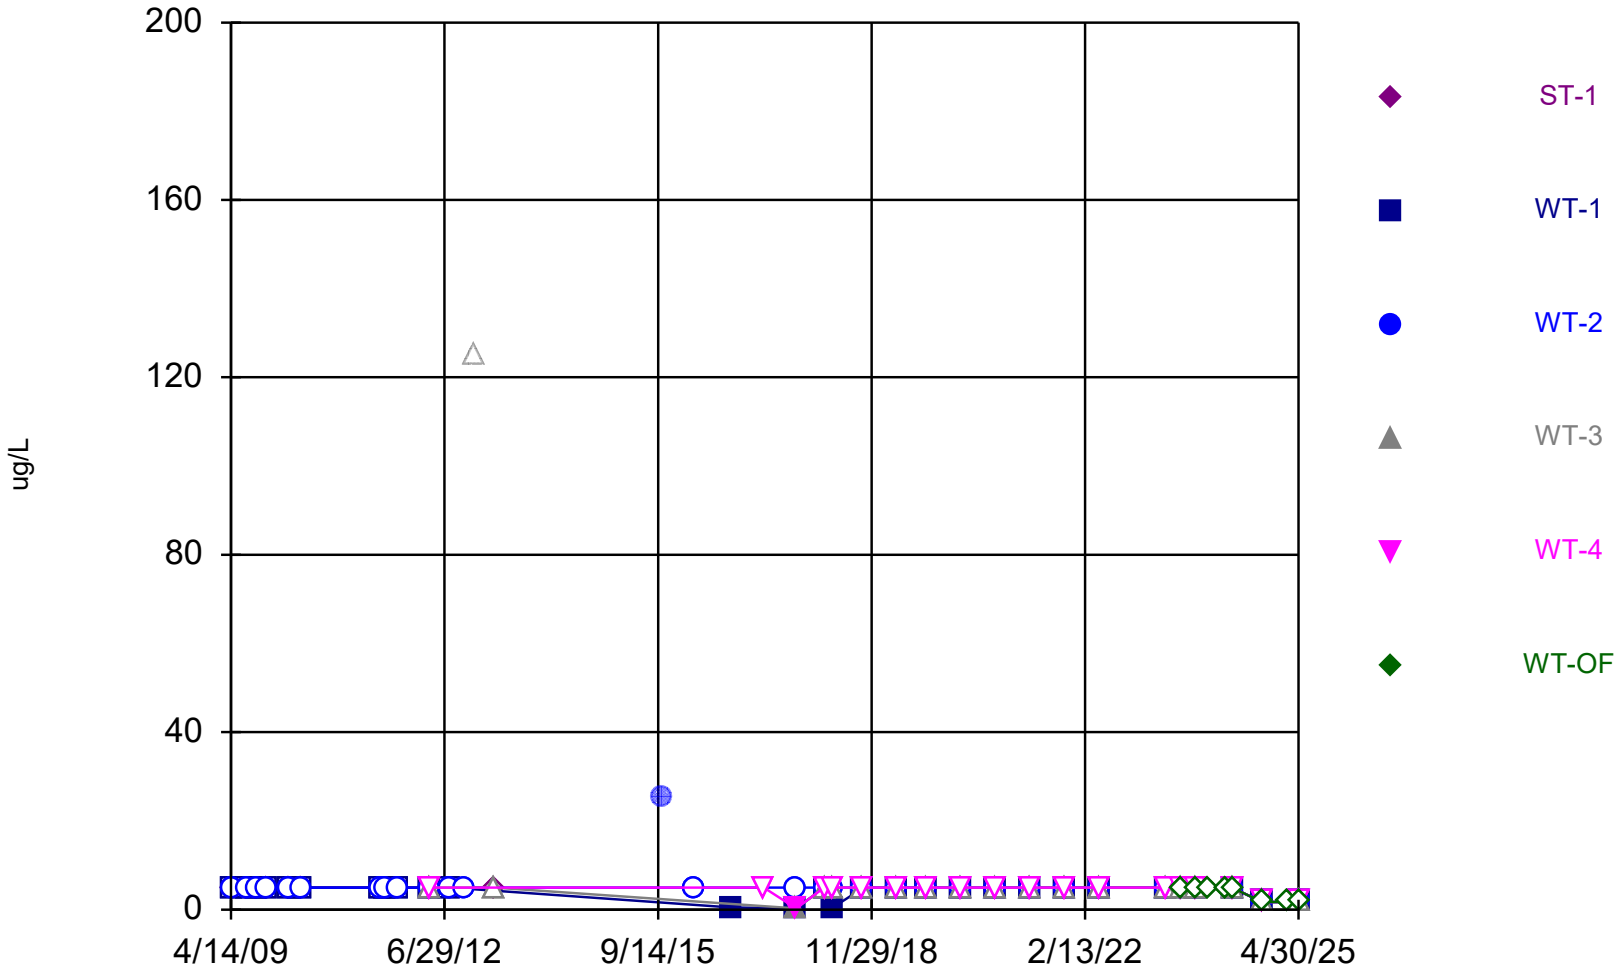


Constituent: Iodomethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

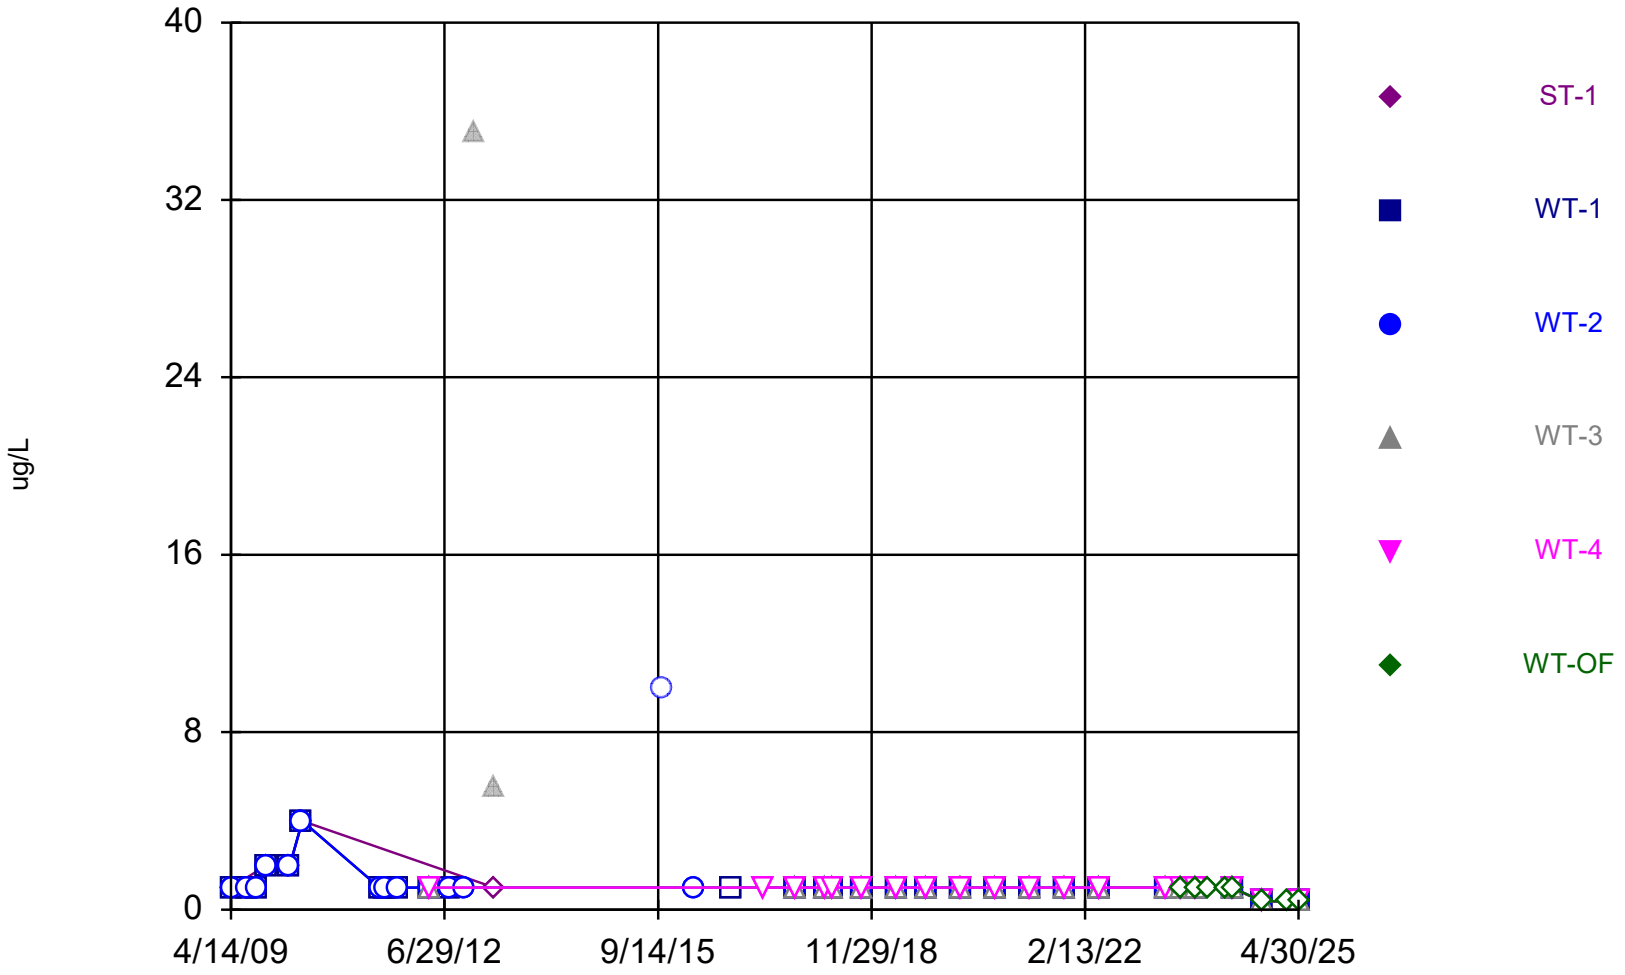


Constituent: Methylene Chloride Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

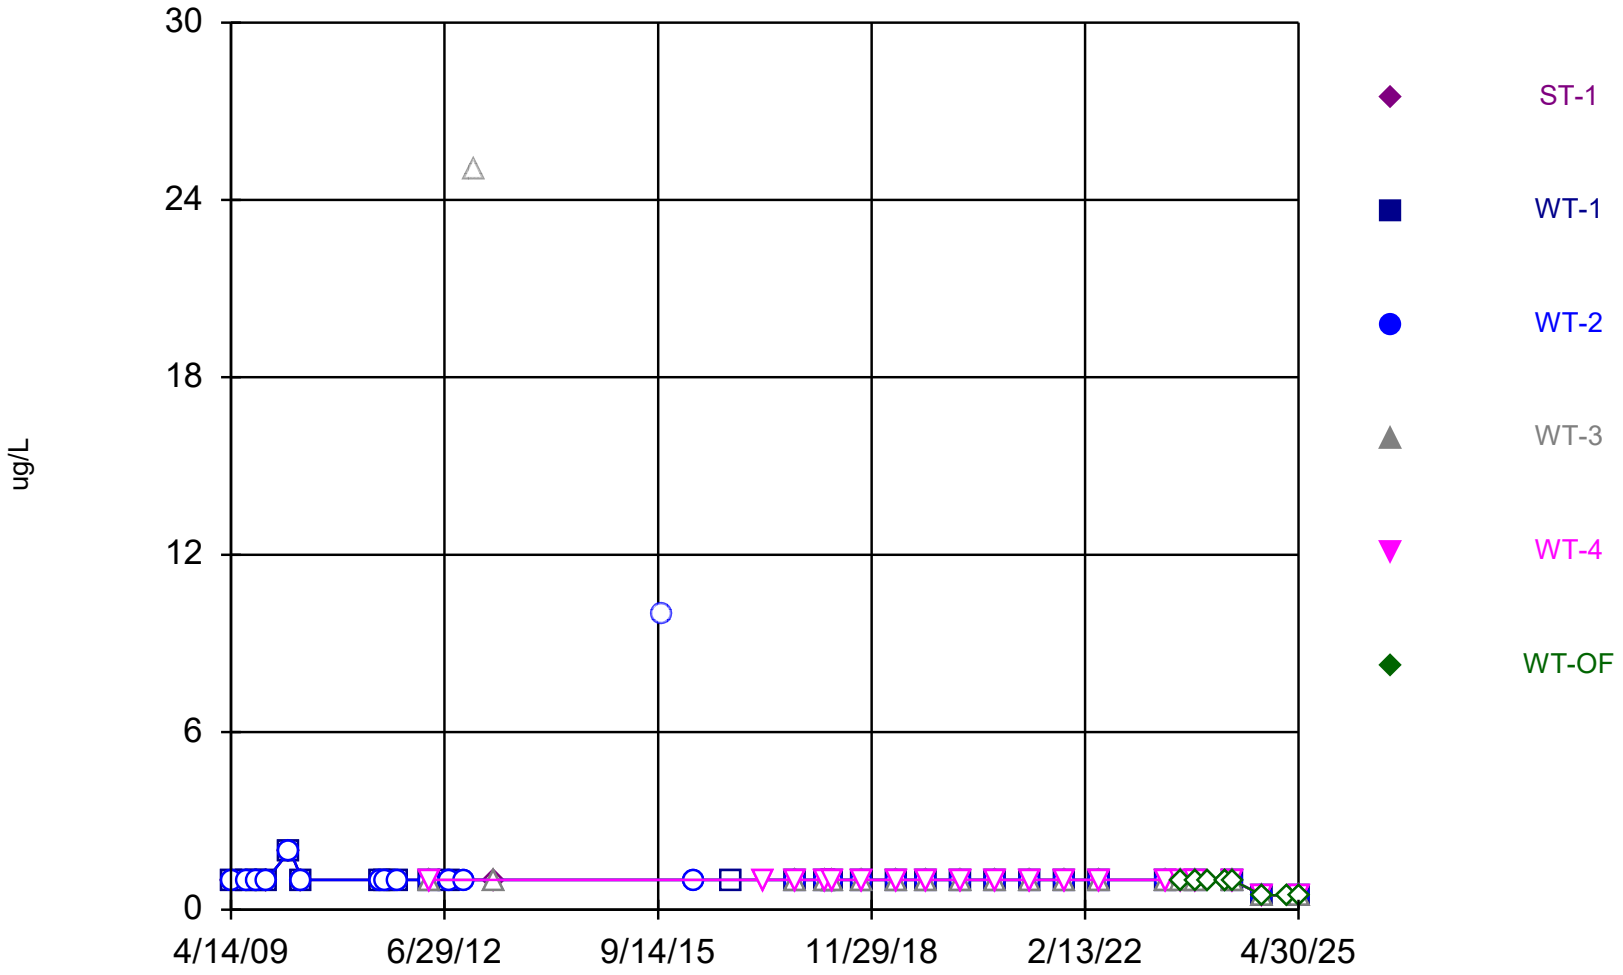


Constituent: Styrene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

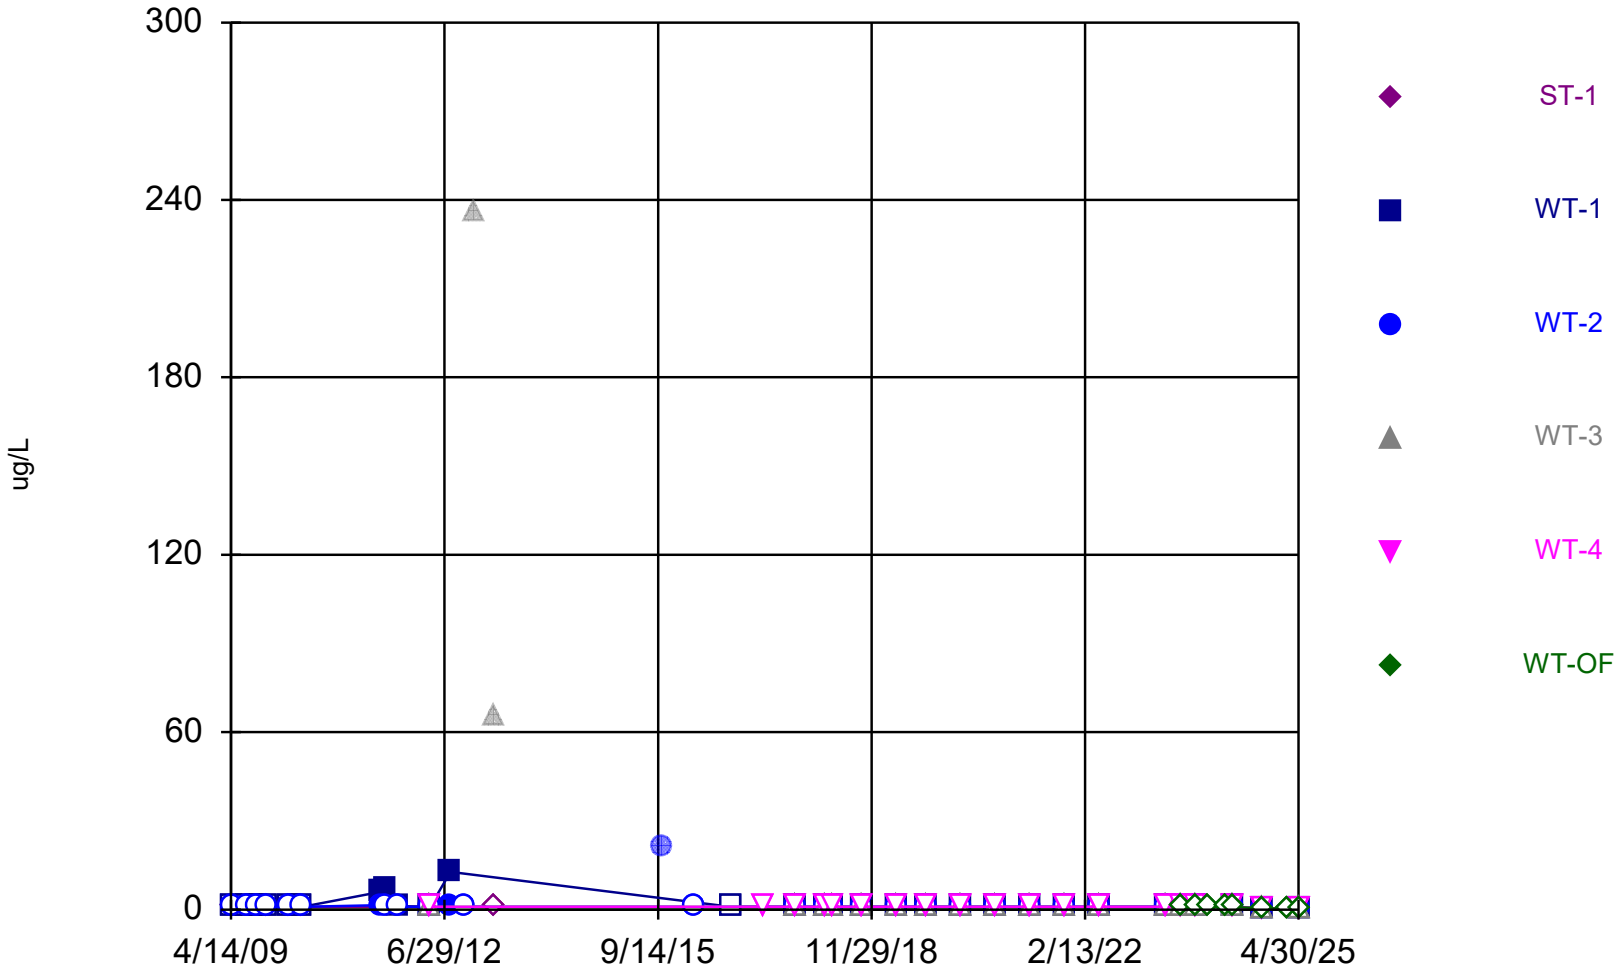


Constituent: Tetrachloroethene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

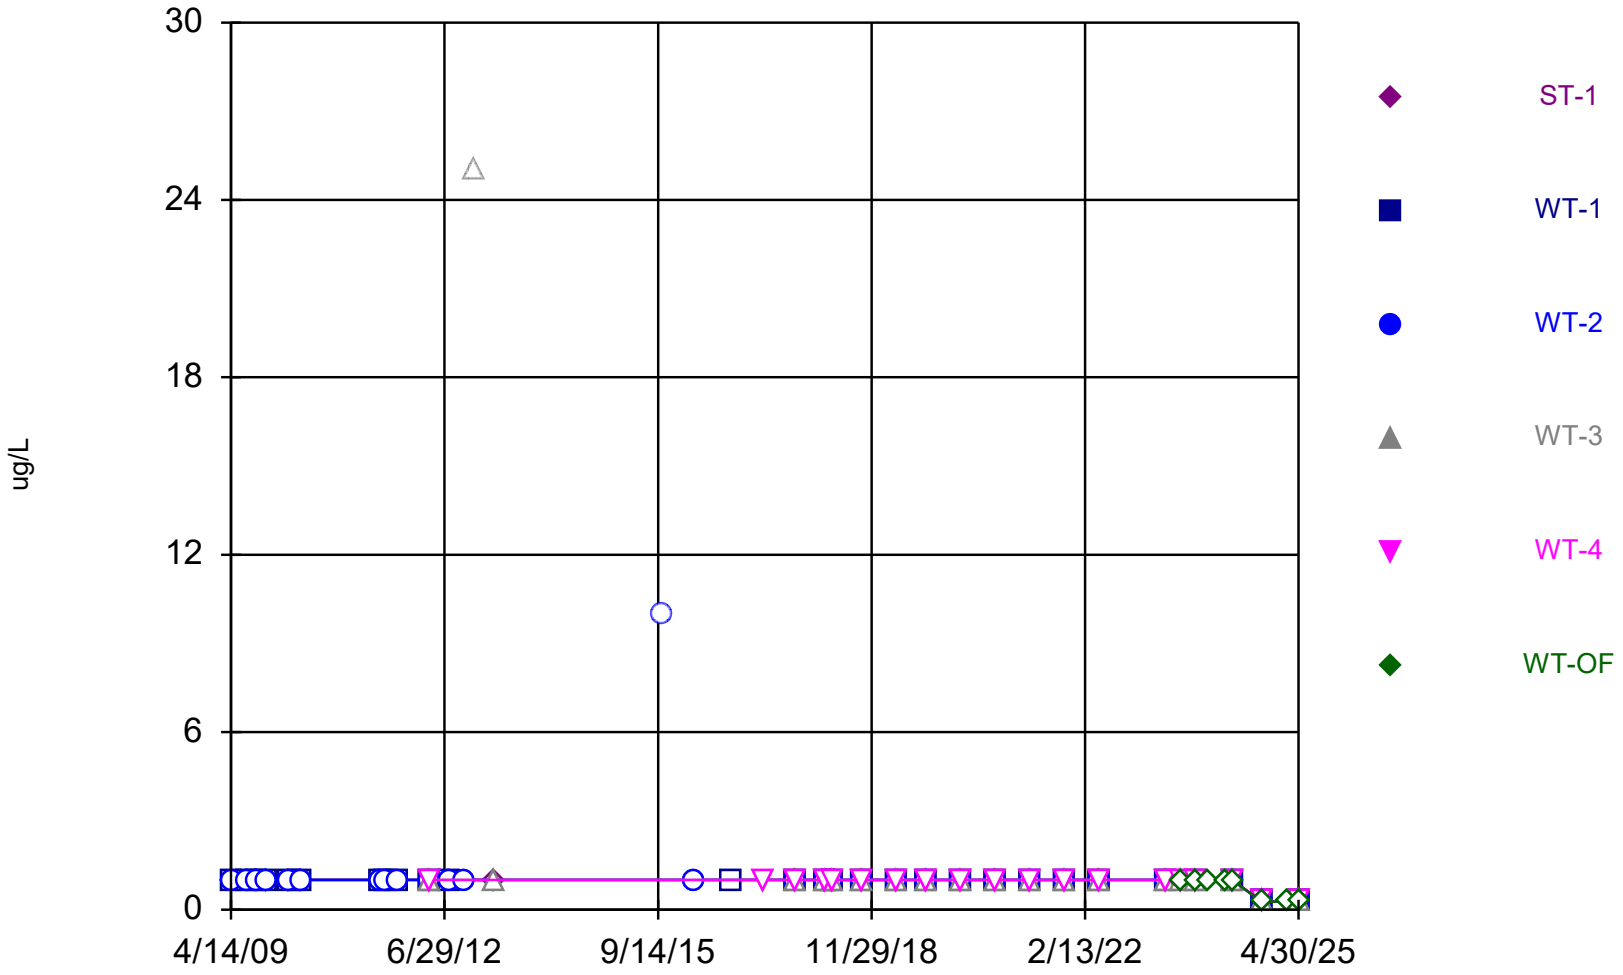


Constituent: Toluene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

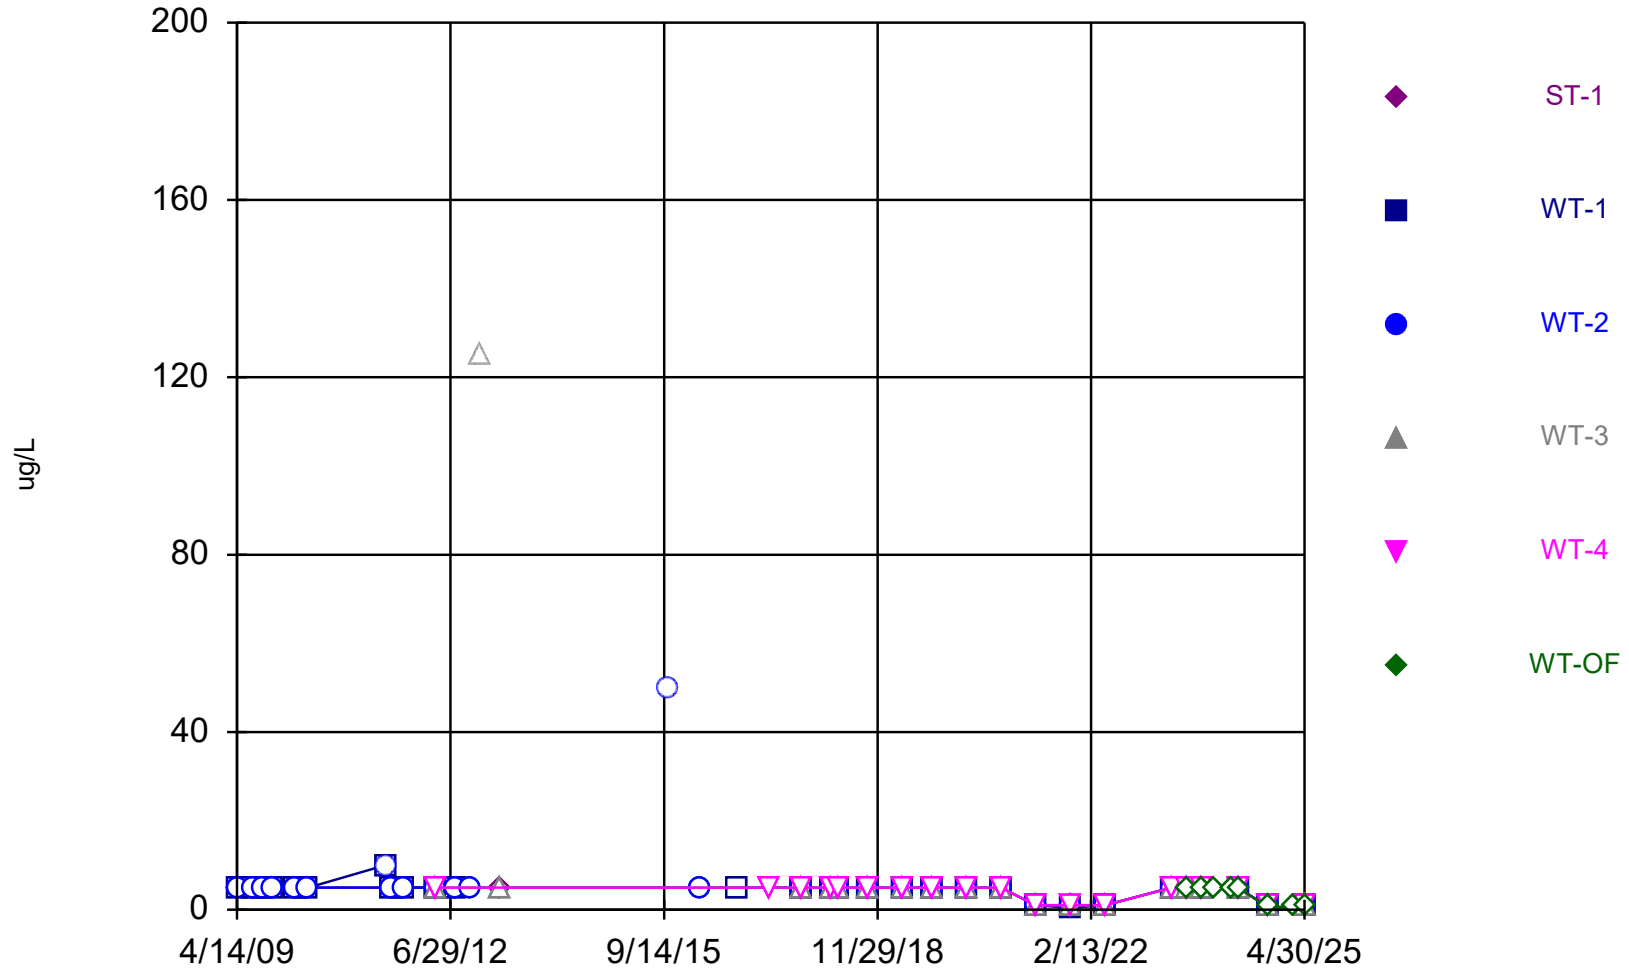


Constituent: trans-1,2-Dichloroethene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

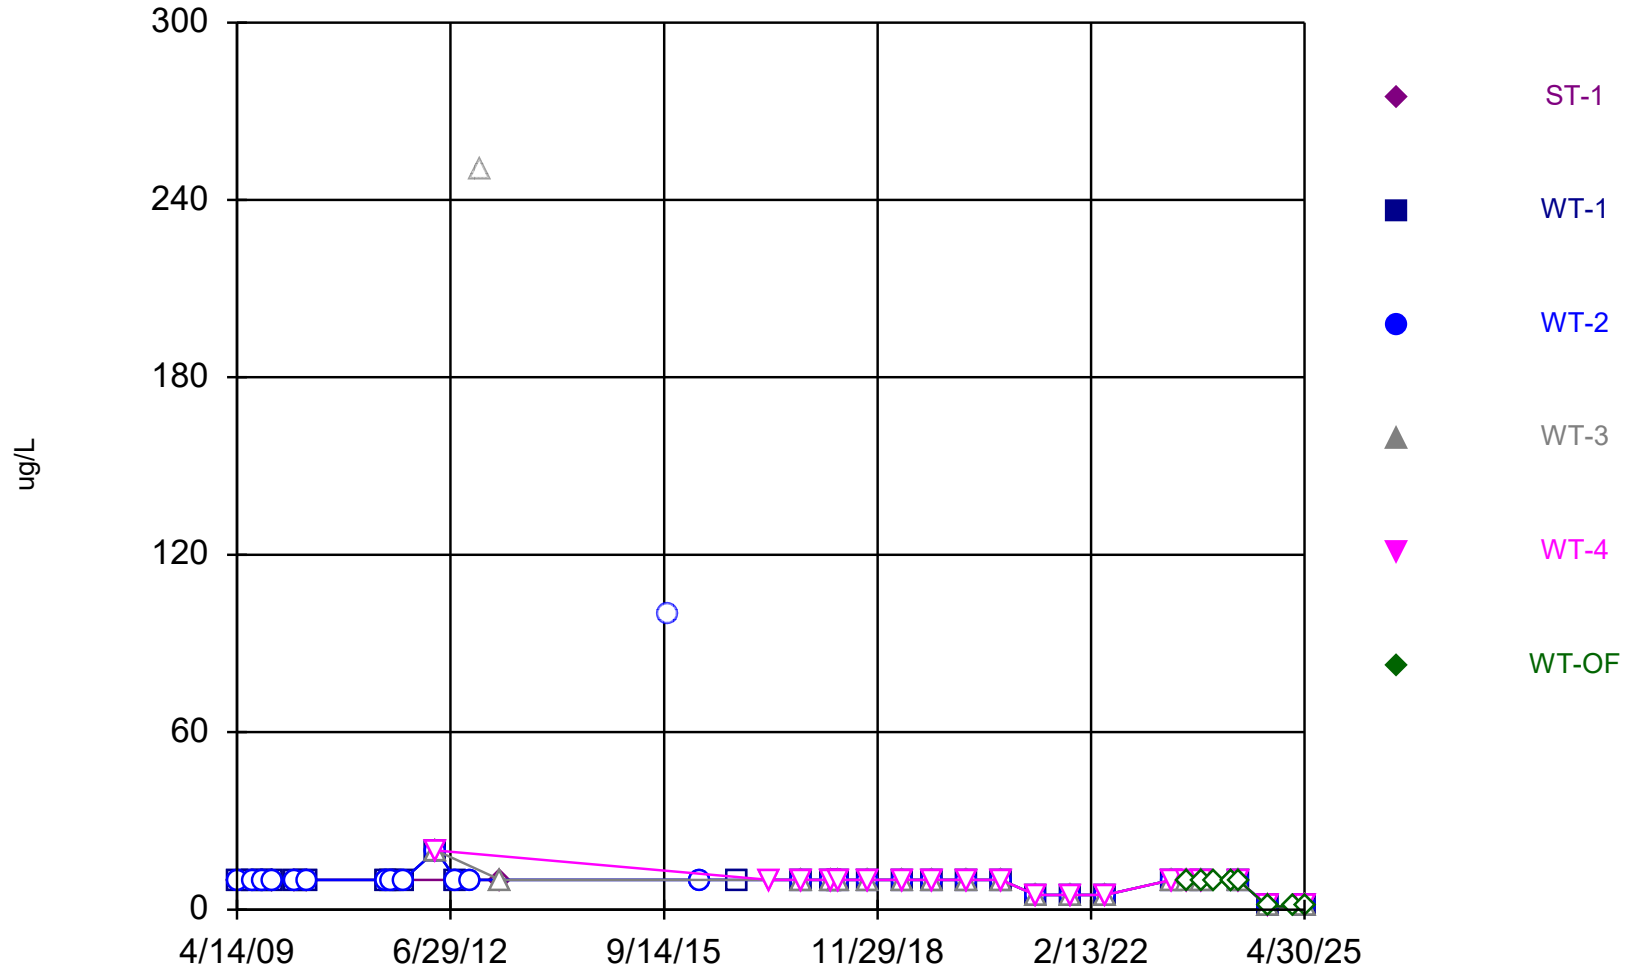


Constituent: trans-1,3-Dichloropropene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

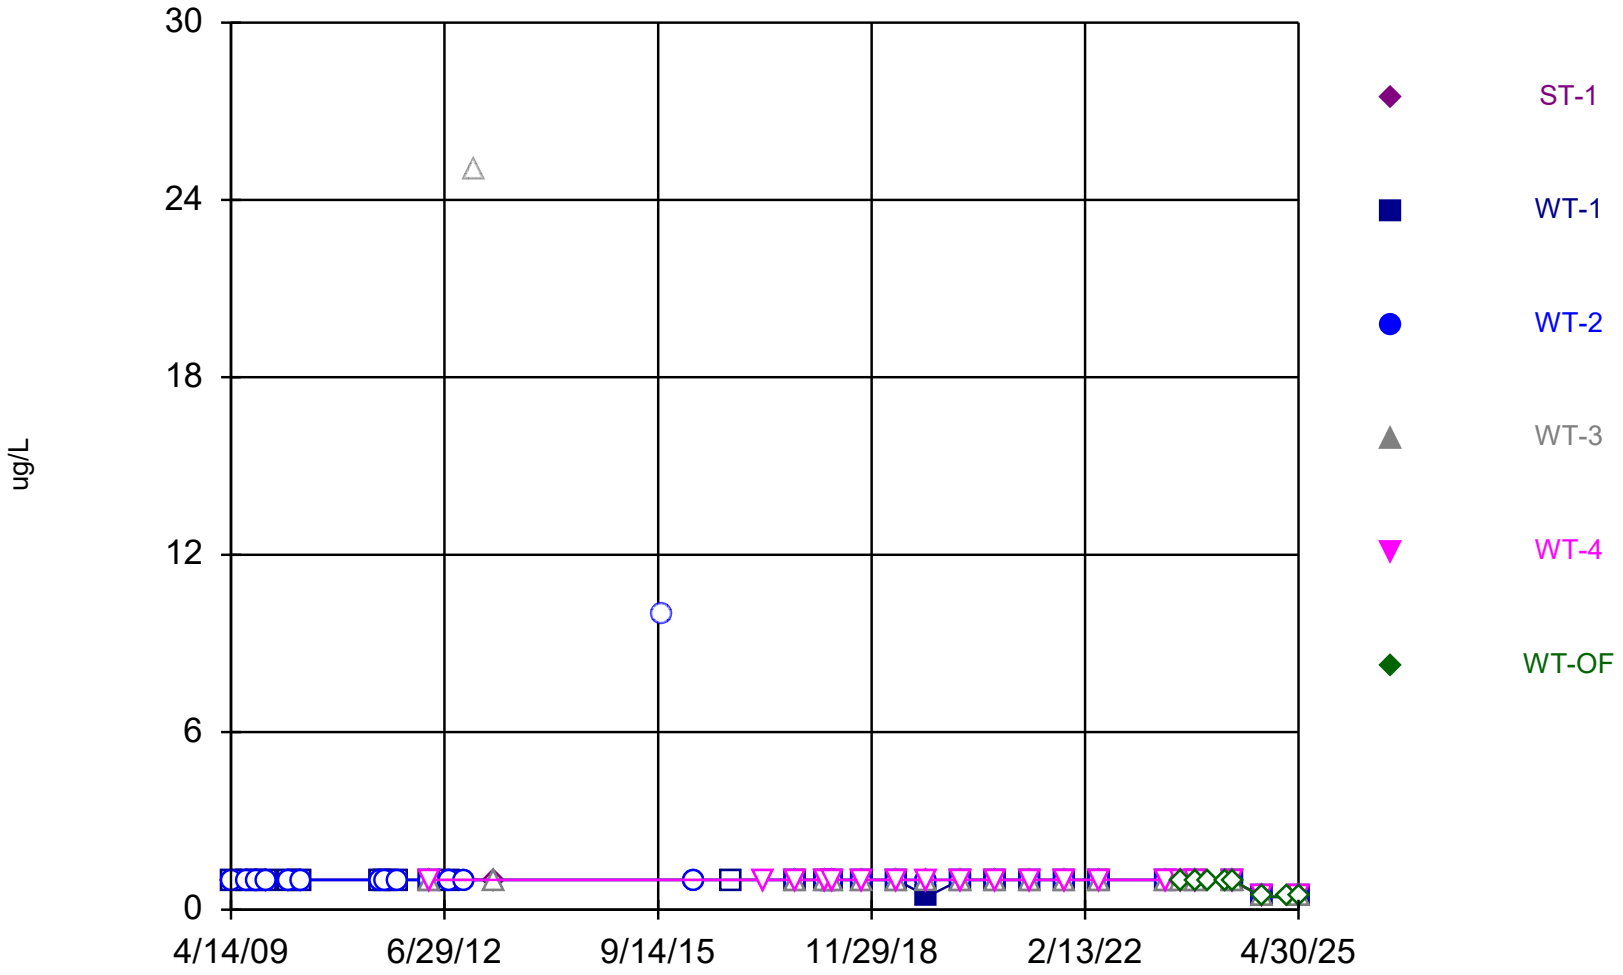


Constituent: trans-1,4-Dichloro-2-Butene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

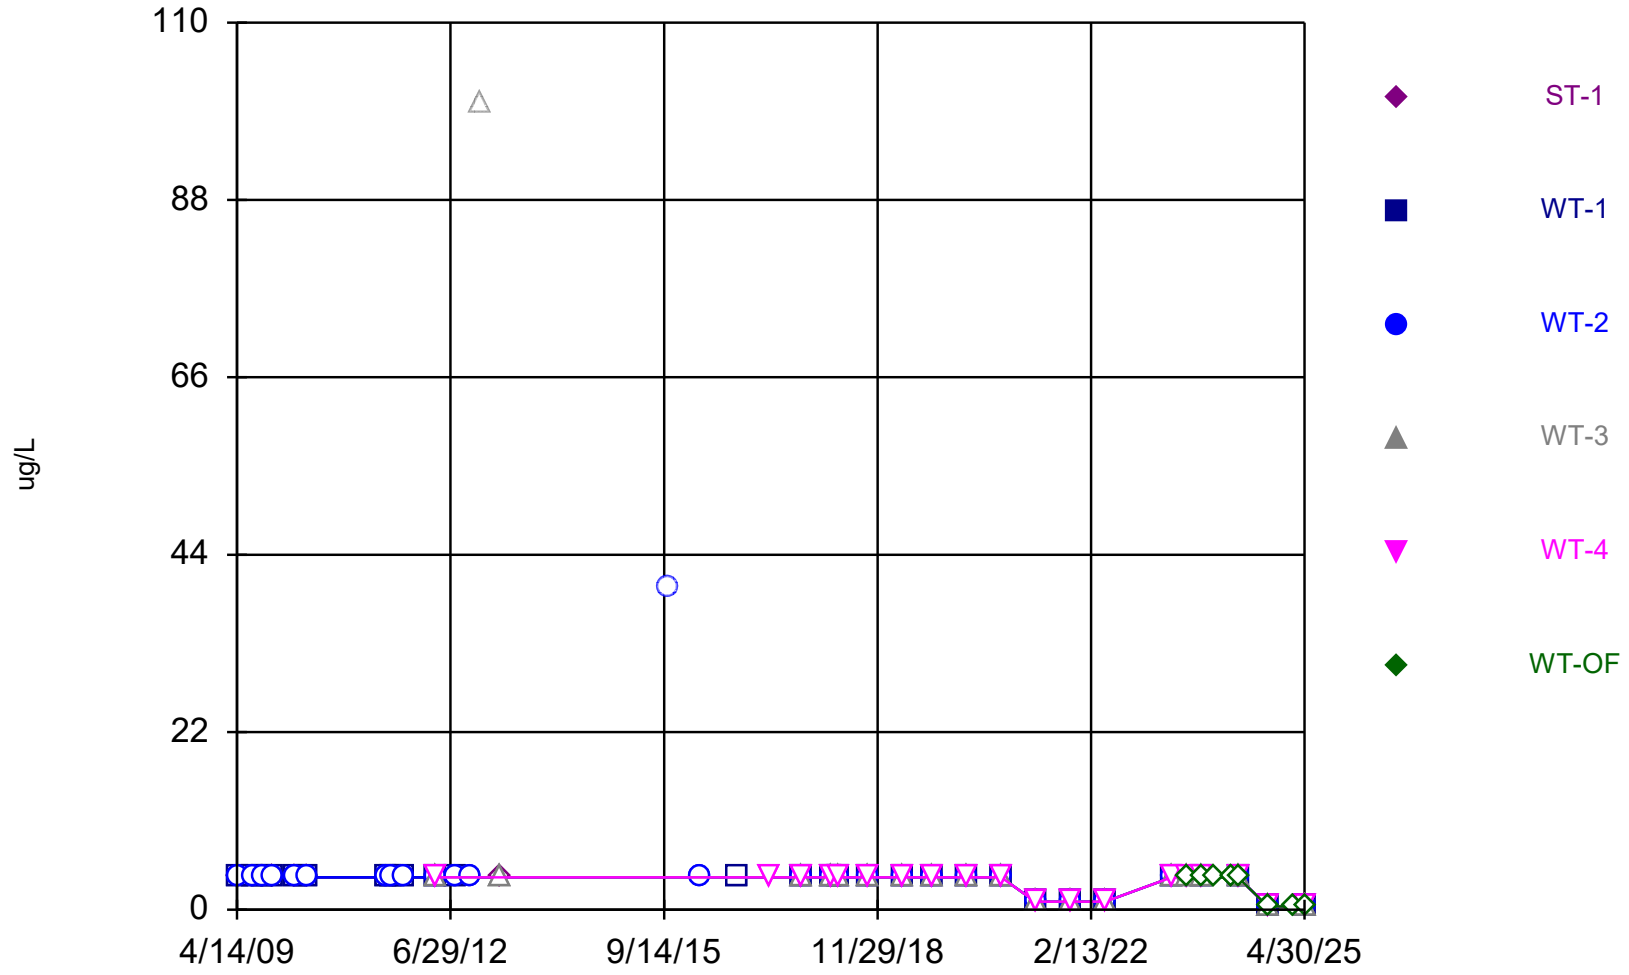


Constituent: Trichloroethene Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

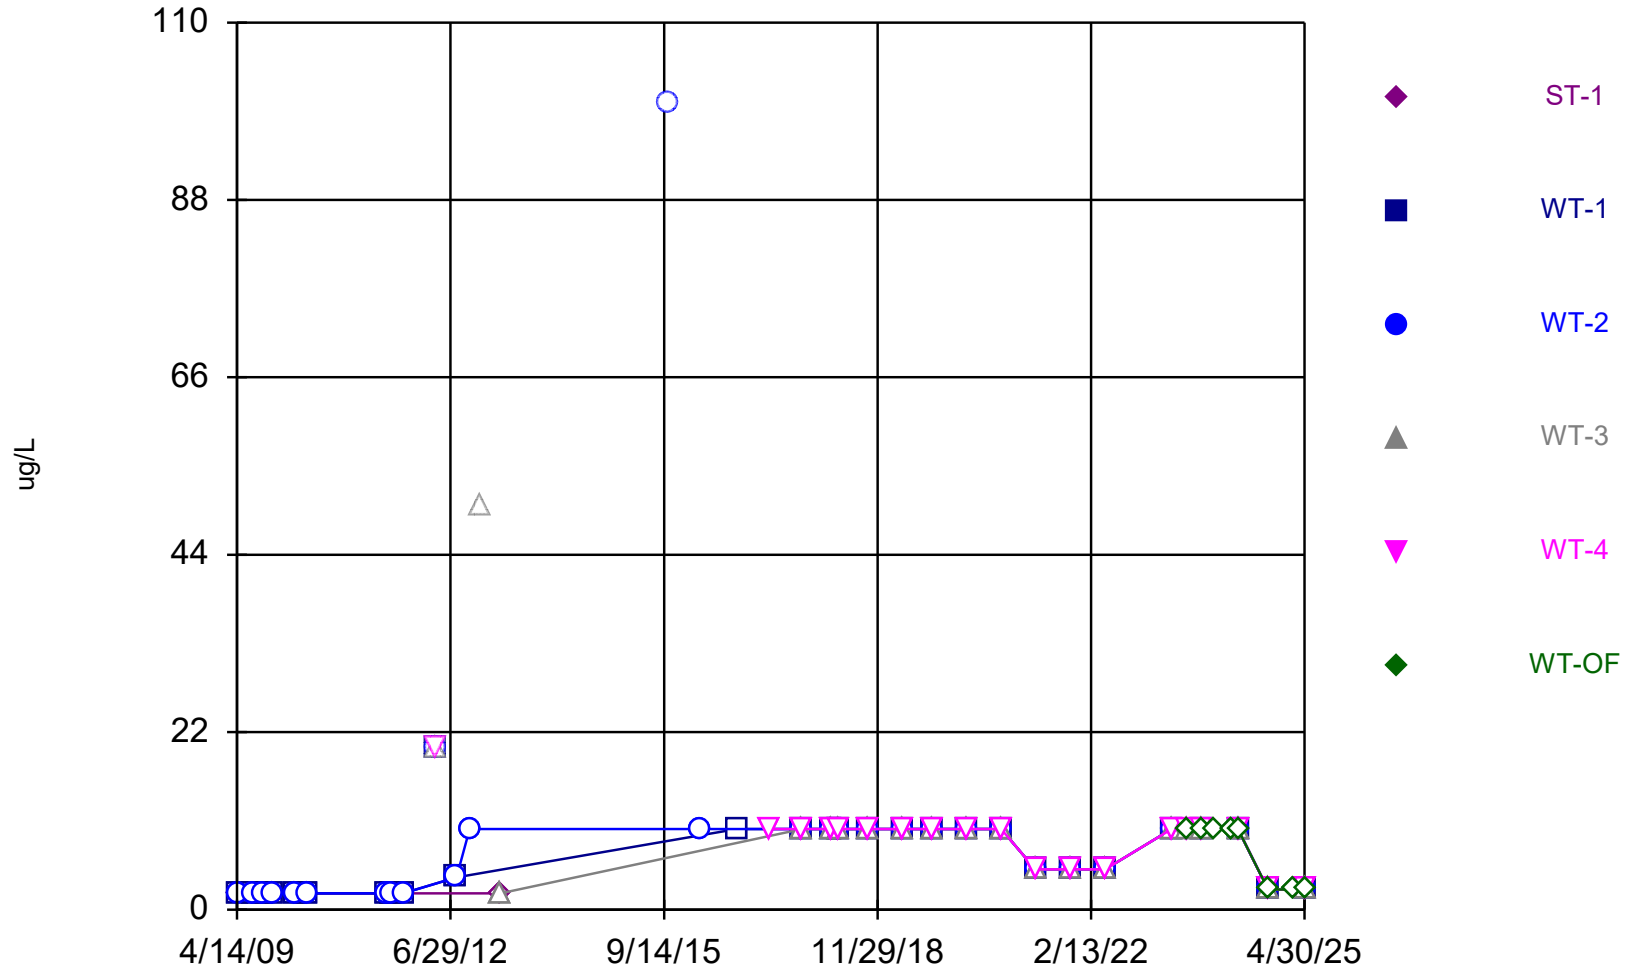


Constituent: Trichlorofluoromethane Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

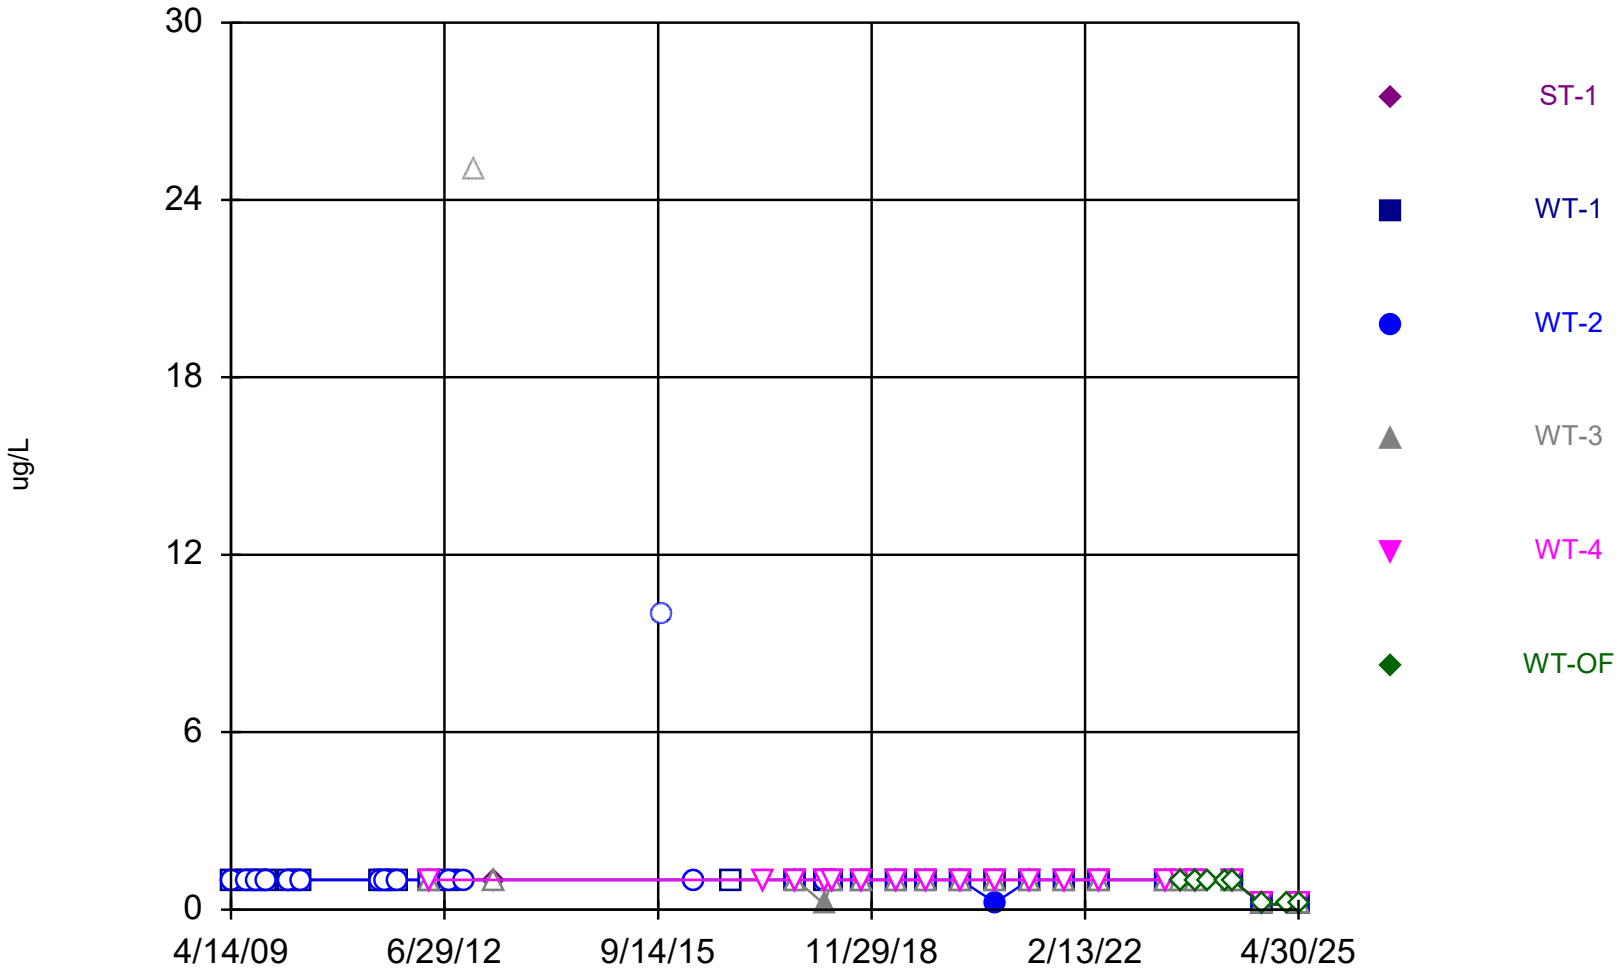


Constituent: Vinyl Acetate Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series

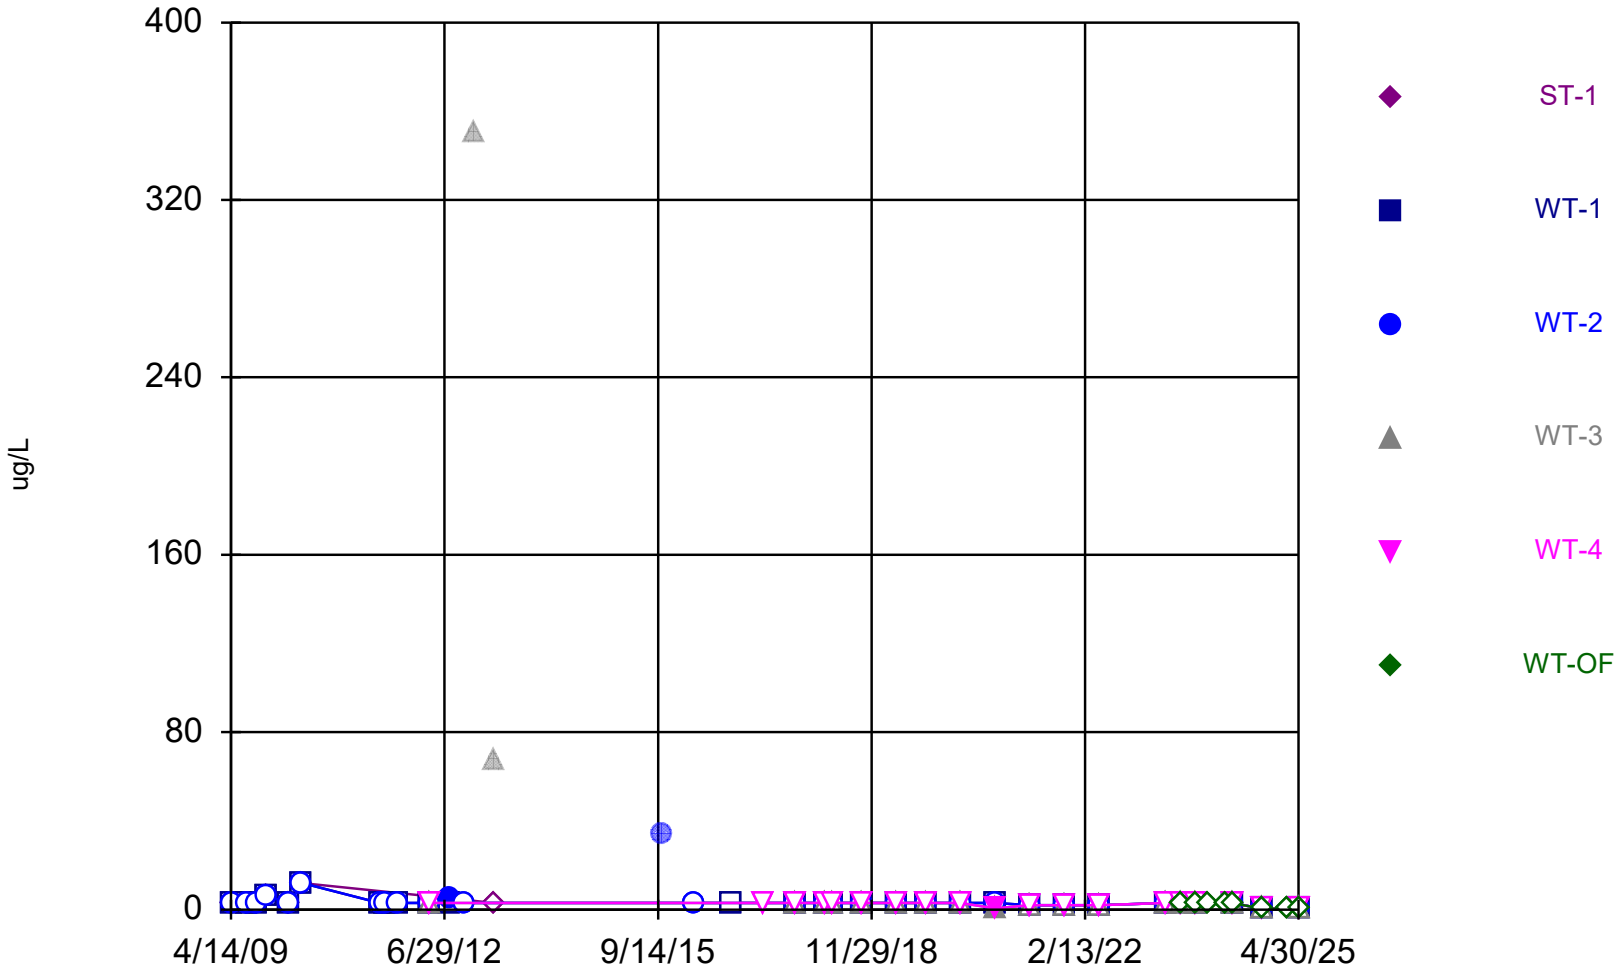


Constituent: Vinyl Chloride Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Time Series



Constituent: Xylenes, Total Analysis Run 7/13/2025 10:35 AM View: 02_GU_Organics

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

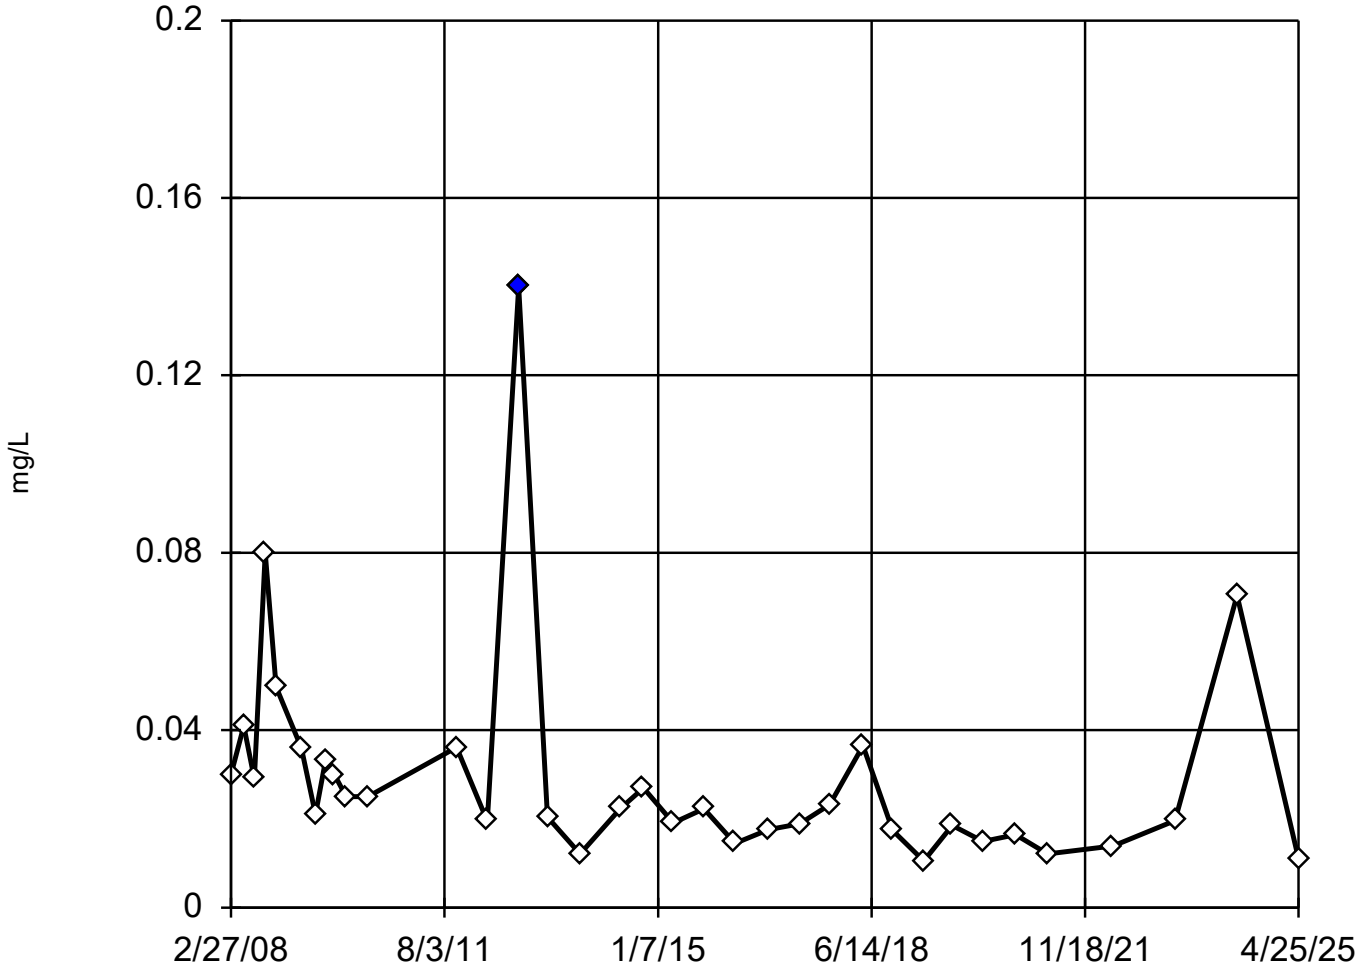
Rosner's Outlier Test

MW-8B



n = 35

Statistical outlier is drawn as solid.
1 value manually flagged as an outlier.

k = 1
r = 3.078
Tabulated value = 2.95
Alpha = 0.01

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9601
Critical = 0.943 (after natural log transformation)
The distribution, after removal of suspect value, was found to be log-normal.

Constituent: Arsenic Analysis Run 7/13/2025 7:36 PM View: 04_MW_Inorganics

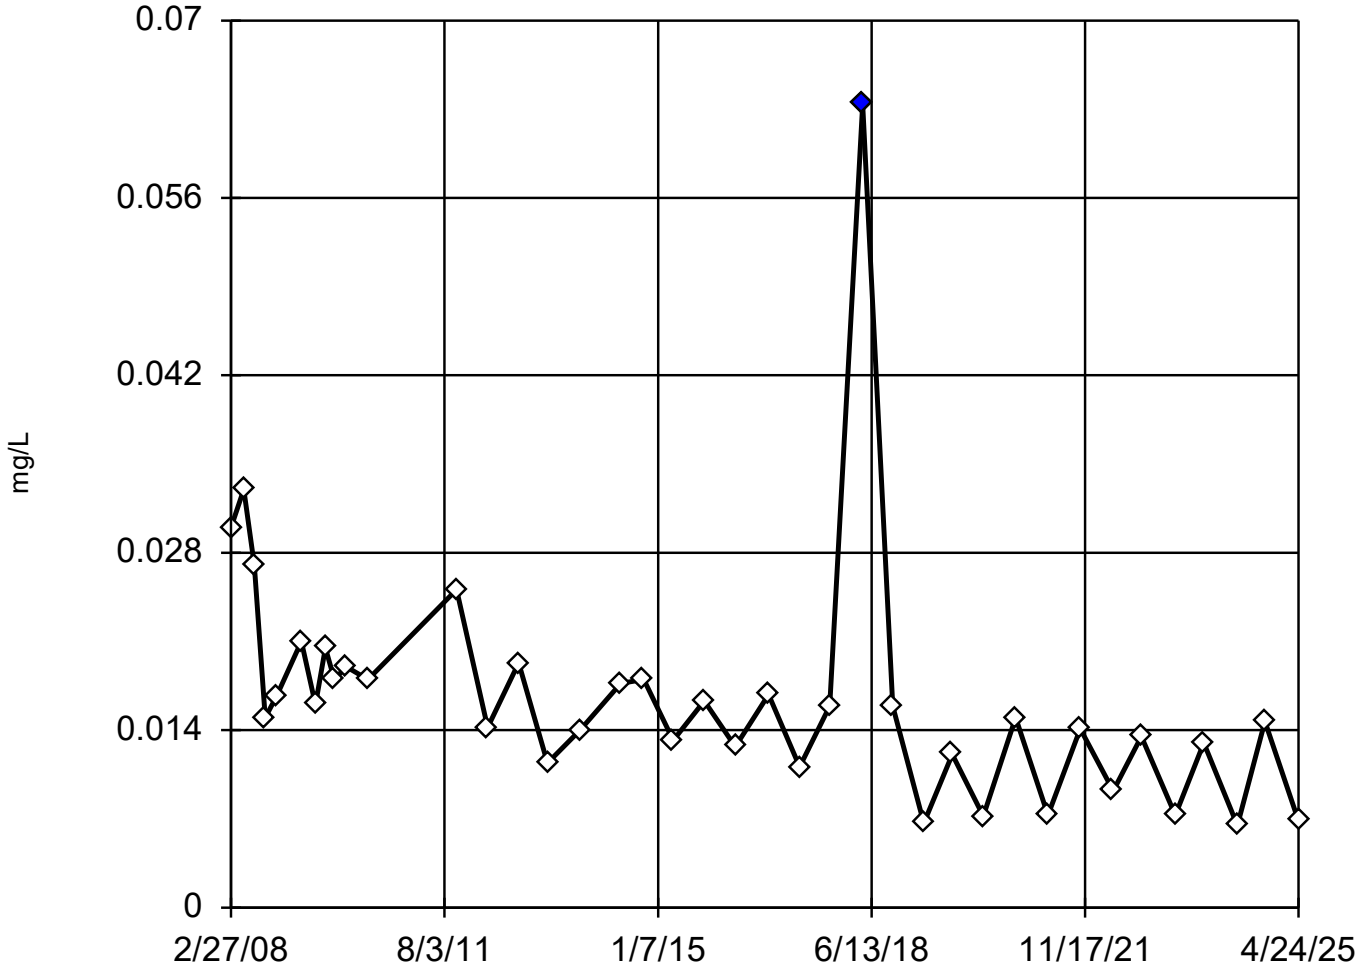
Tukey's Outlier Screening

MW-15A



n = 39

Outlier is drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.05926, low cutoff = 0.003676, based on IQR multiplier of 3.

Constituent: Arsenic Analysis Run 7/13/2025 7:36 PM View: 04_MW_Inorganics

Dixon's Outlier Test

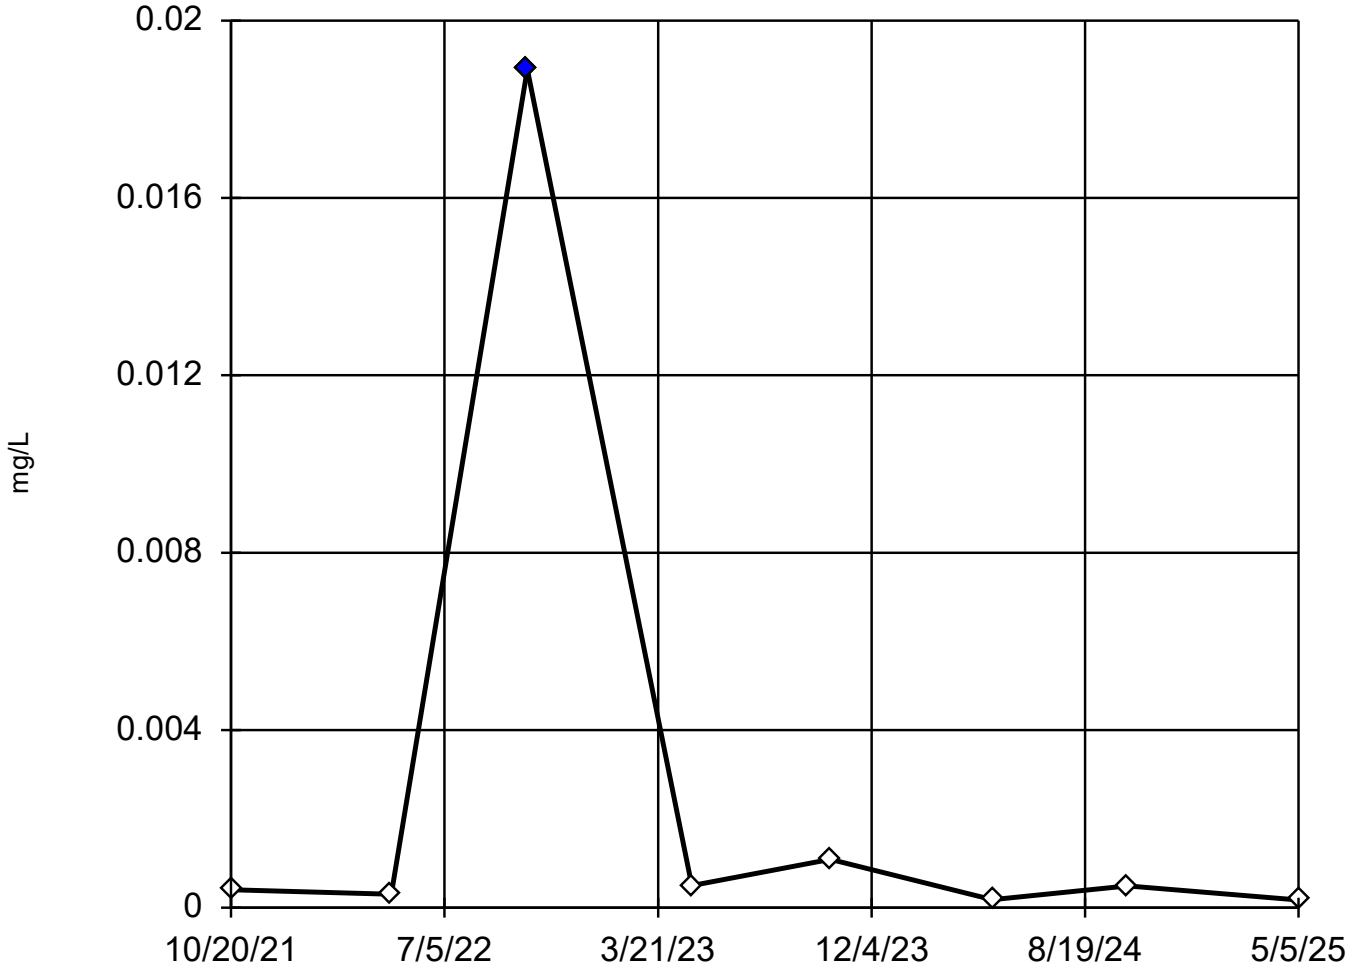
MW-408



n = 8

Statistical outlier is drawn as solid.
1 value manually flagged as an outlier.
Testing for 1 high outlier.
Mean = 0.005257.
Std. Dev. = 0.00568.
0.0191 (o): c = 0.8393
tabl = 0.554.
Alpha = 0.05.

Normality test used:
Shapiro Wilk@alpha = 0.1
Calculated = 0.9257
Critical = 0.838
The distribution, after removal of suspect value, was found to be normally distributed.

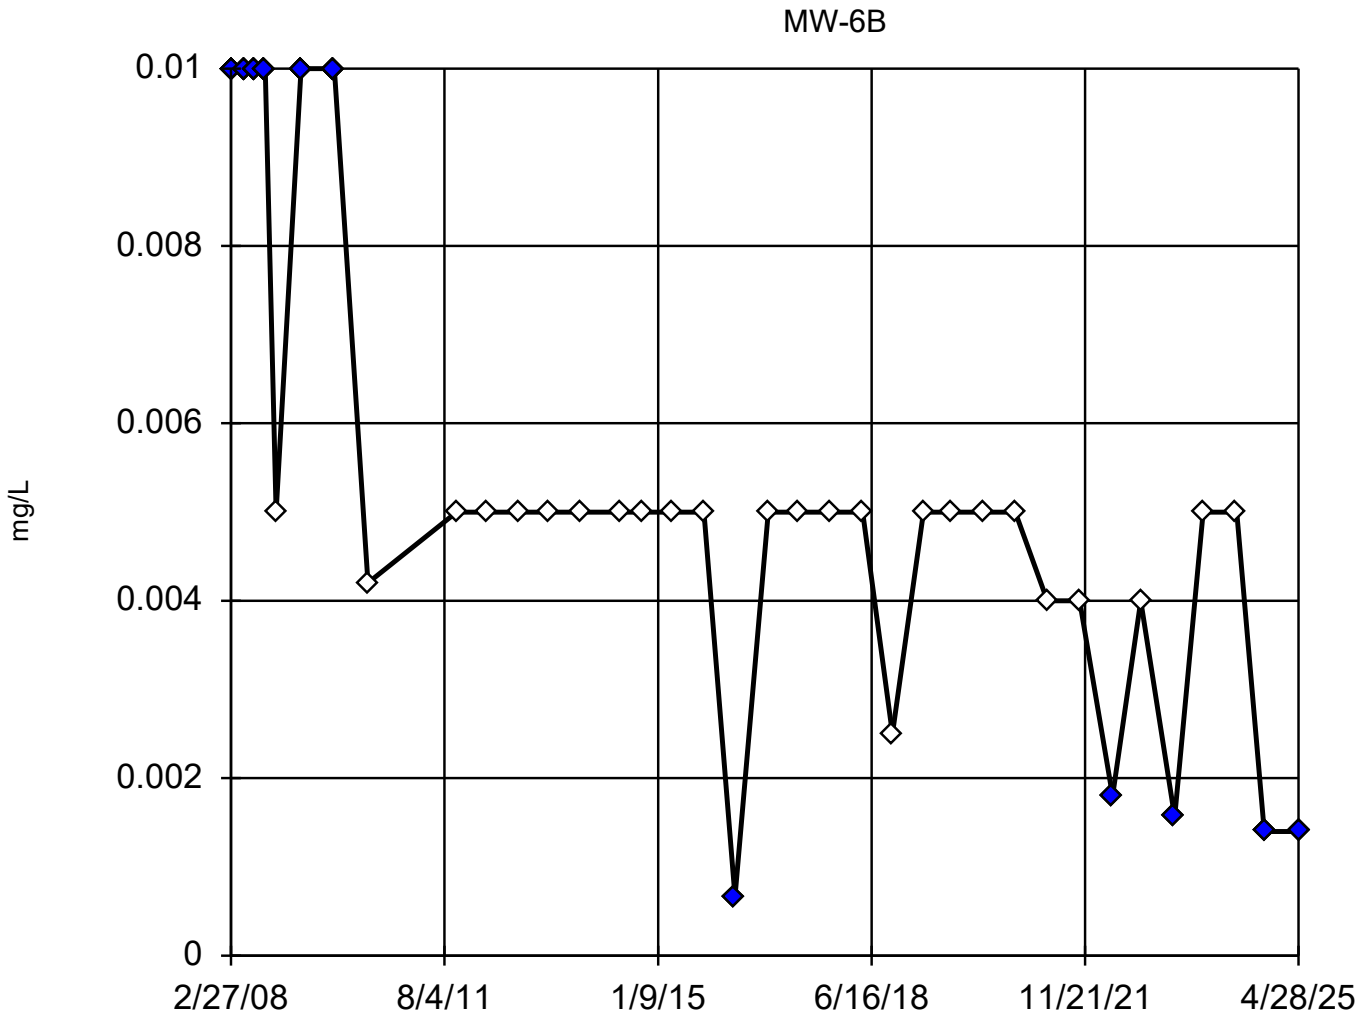
Tukey's Outlier Screening



n = 36

Outliers are drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were square root transformed to achieve best W statistic (graph shown in original units).

High cutoff = 0.008238, low cutoff = 0.001934, based on IQR multiplier of 3.

Tukey's Outlier Screening

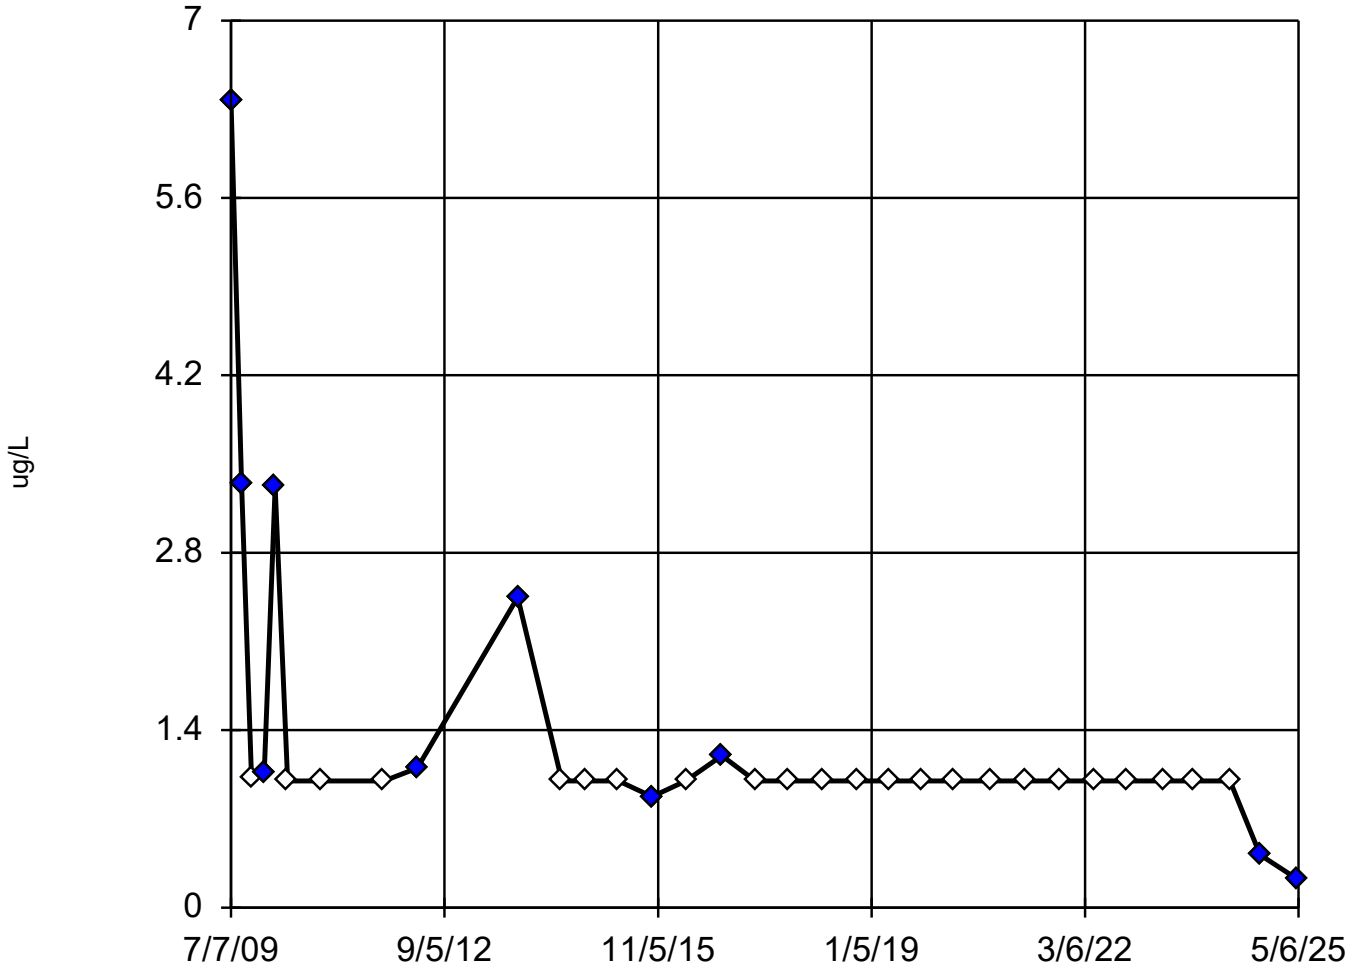
MW-201A



n = 33

Outliers are drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 1.061, low cutoff = 0.9566, based on IQR multiplier of 3.

Constituent: 1,1-Dichloroethane Analysis Run 7/13/2025 10:56 PM View: 06A_MW_Organics_PL

Tukey's Outlier Screening

n = 30

Outlier is drawn as solid.
Tukey's method used in lieu of parametric test because the Shapiro Wilk normality test failed at the 0.1 alpha level.

Data were natural log transformed to achieve best W statistic (graph shown in original units).

High cutoff = 15.59, low cutoff = 0.3333, based on IQR multiplier of 3.

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4,4`-DDD Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4,4`-DDD Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4,4`-DDT Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4,4`-DDT Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4,4`-DDT Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4-Methyl-2-pentanone [MIBK] Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_P

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4-Methyl-2-pentanone [MIBK] Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_P

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: 4-Methyl-2-pentanone [MIBK] Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_P

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: Acetone Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

Constituent: Acetone Analysis Run 7/14/2025 12:09 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

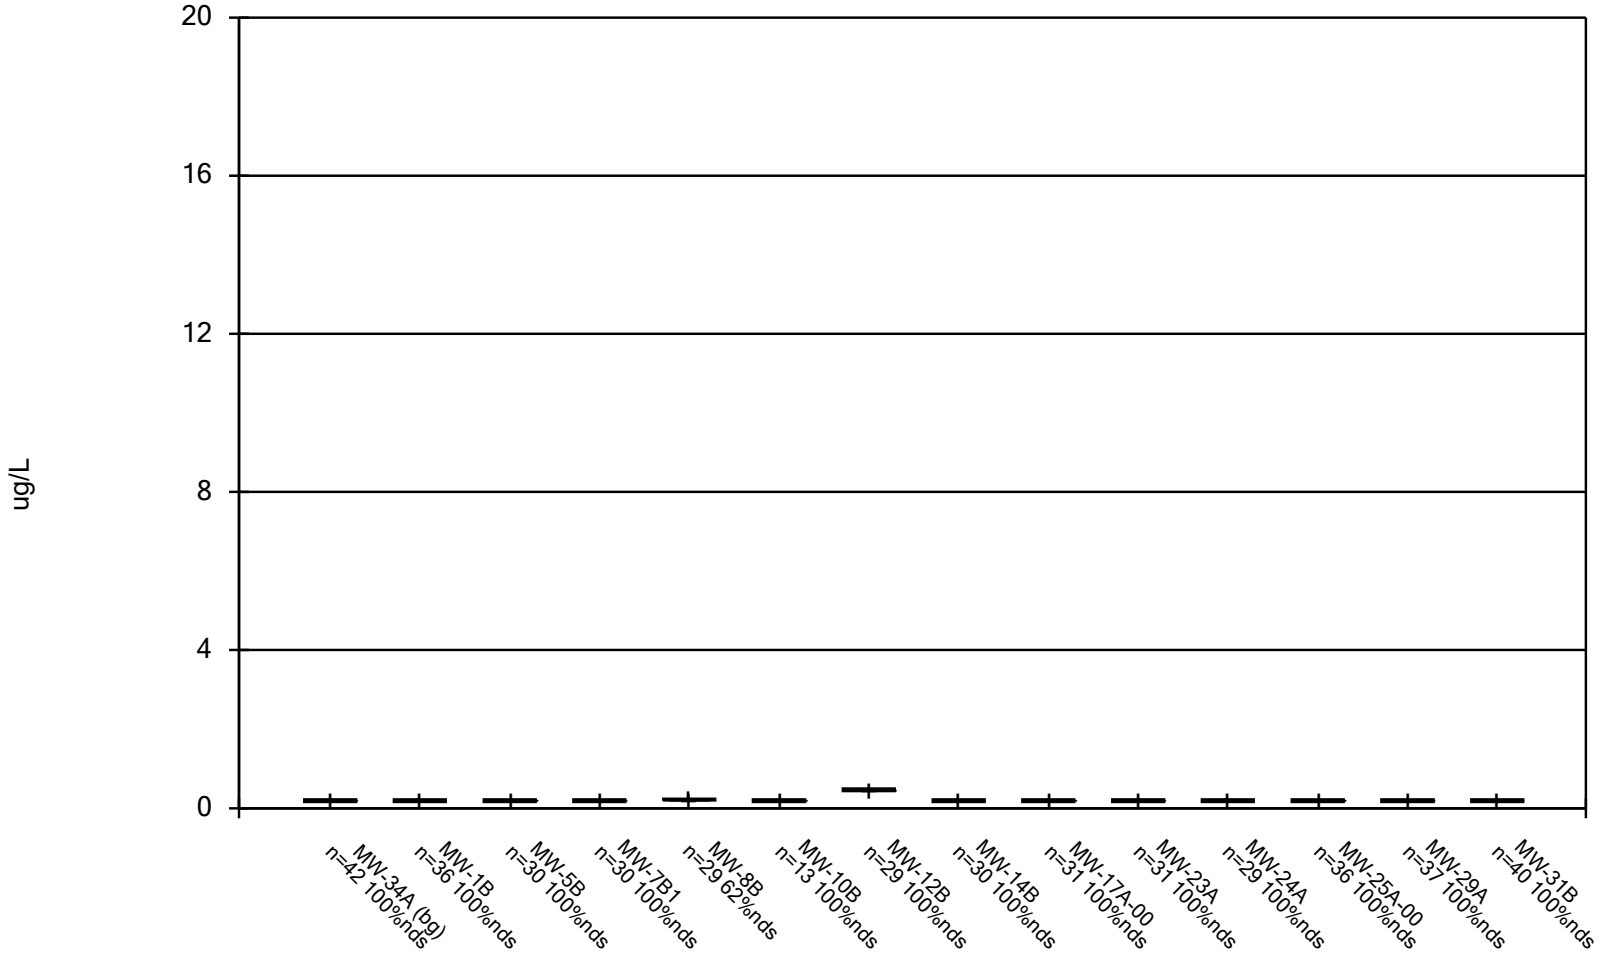
Constituent: Acetone Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

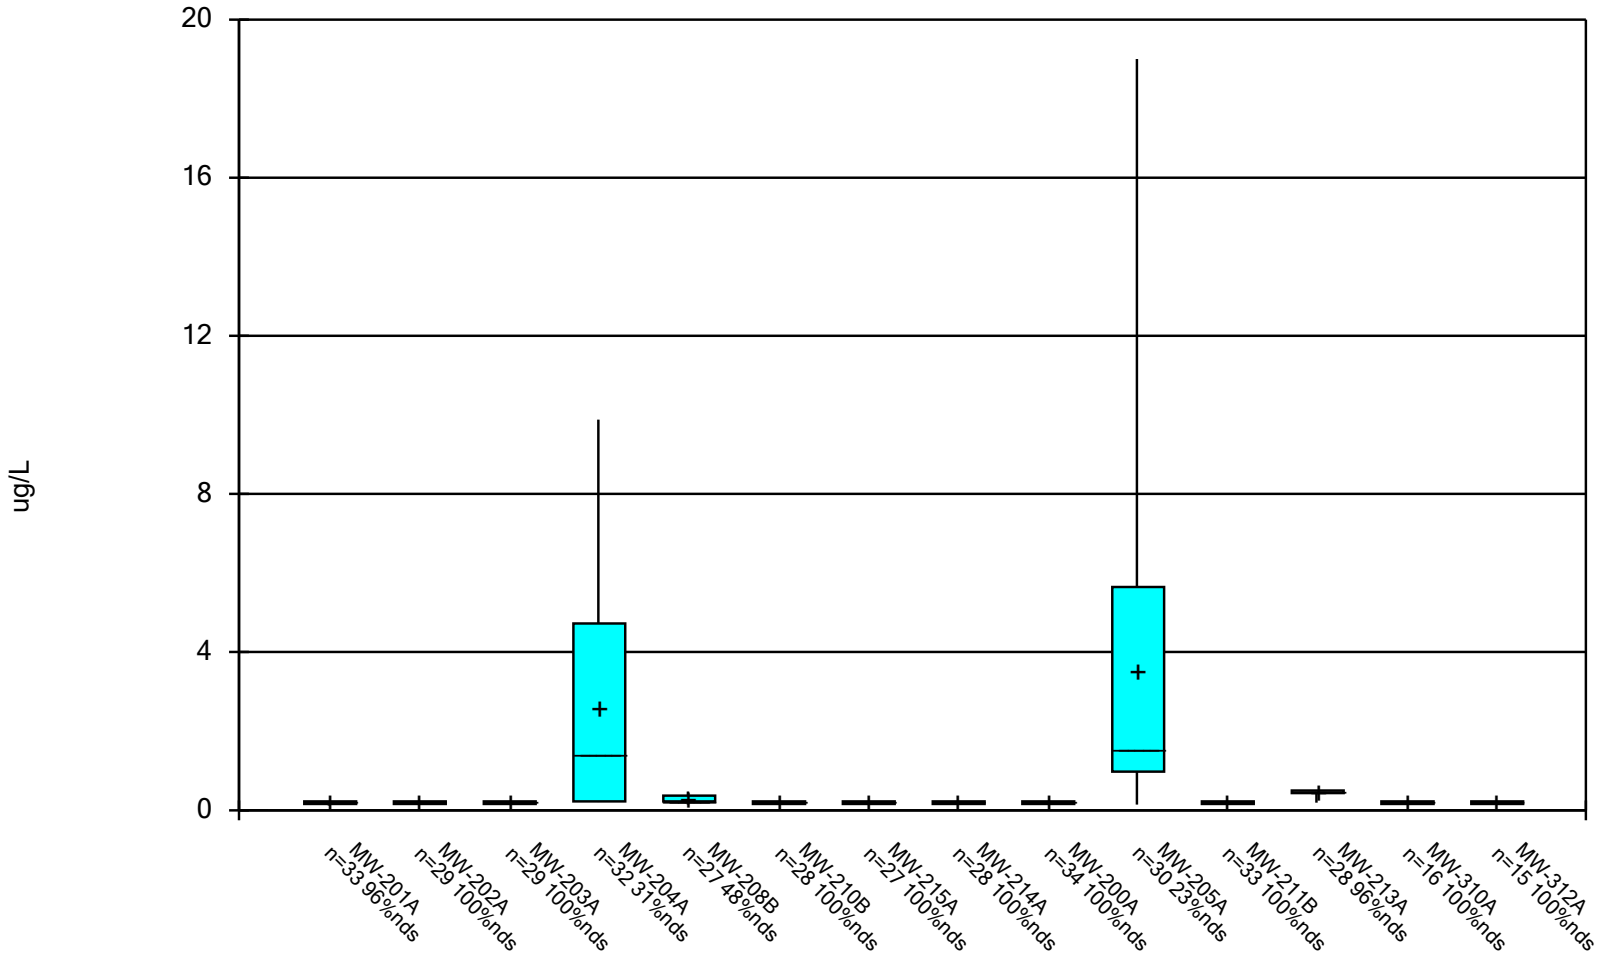


Constituent: Benzene Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

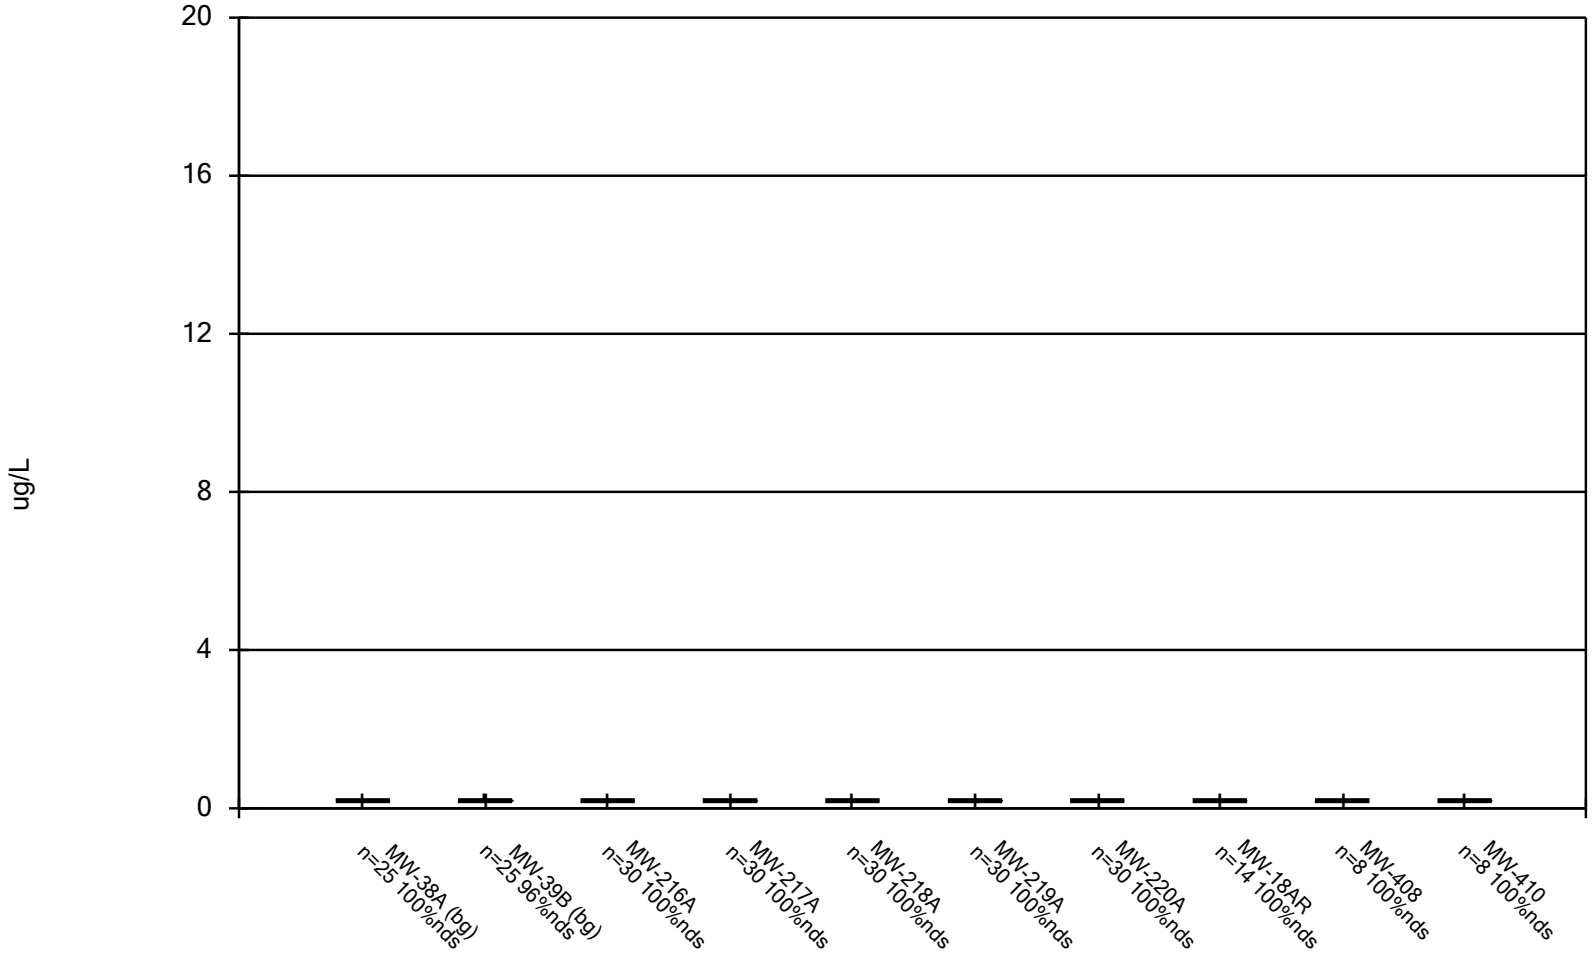


Constituent: Benzene Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

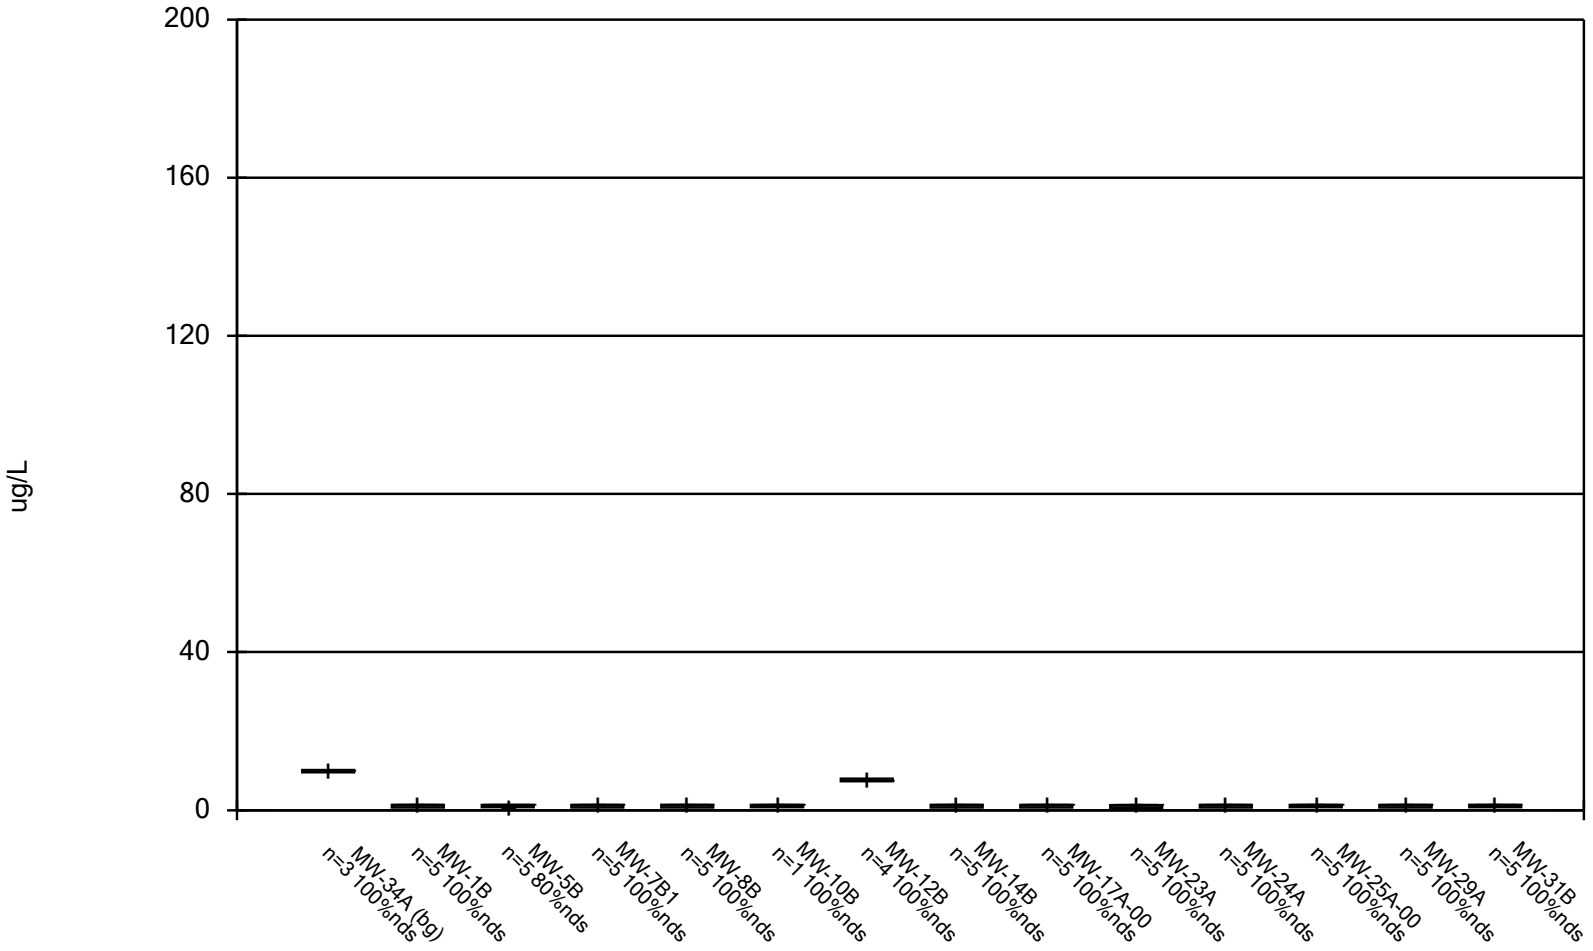


Constituent: Benzene Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

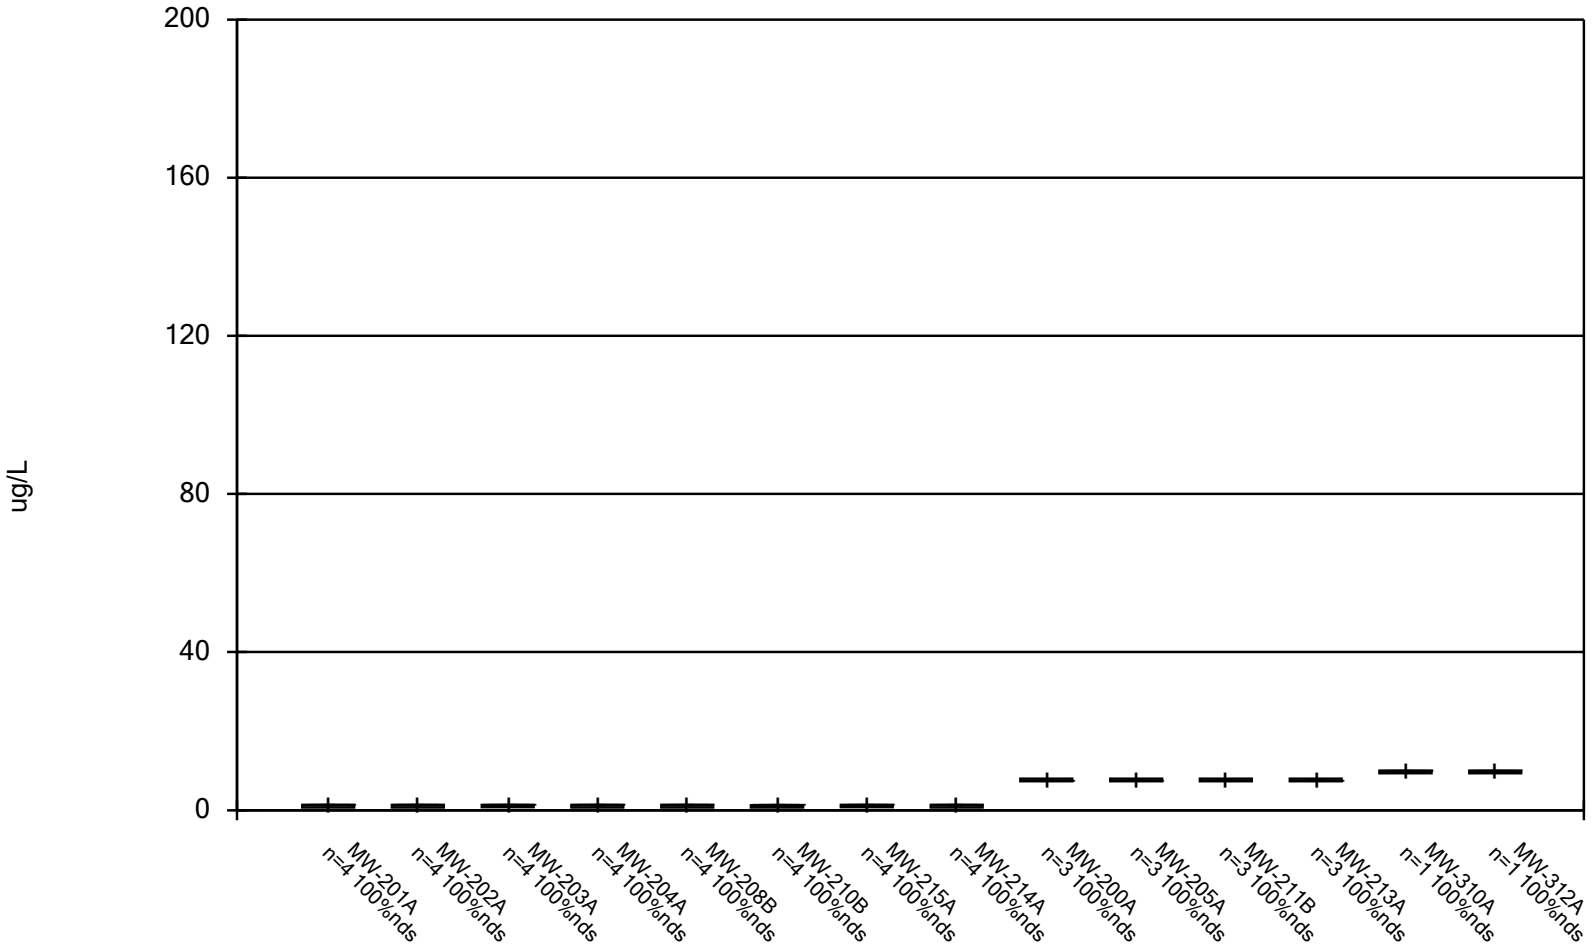


Constituent: Benzyl alcohol Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

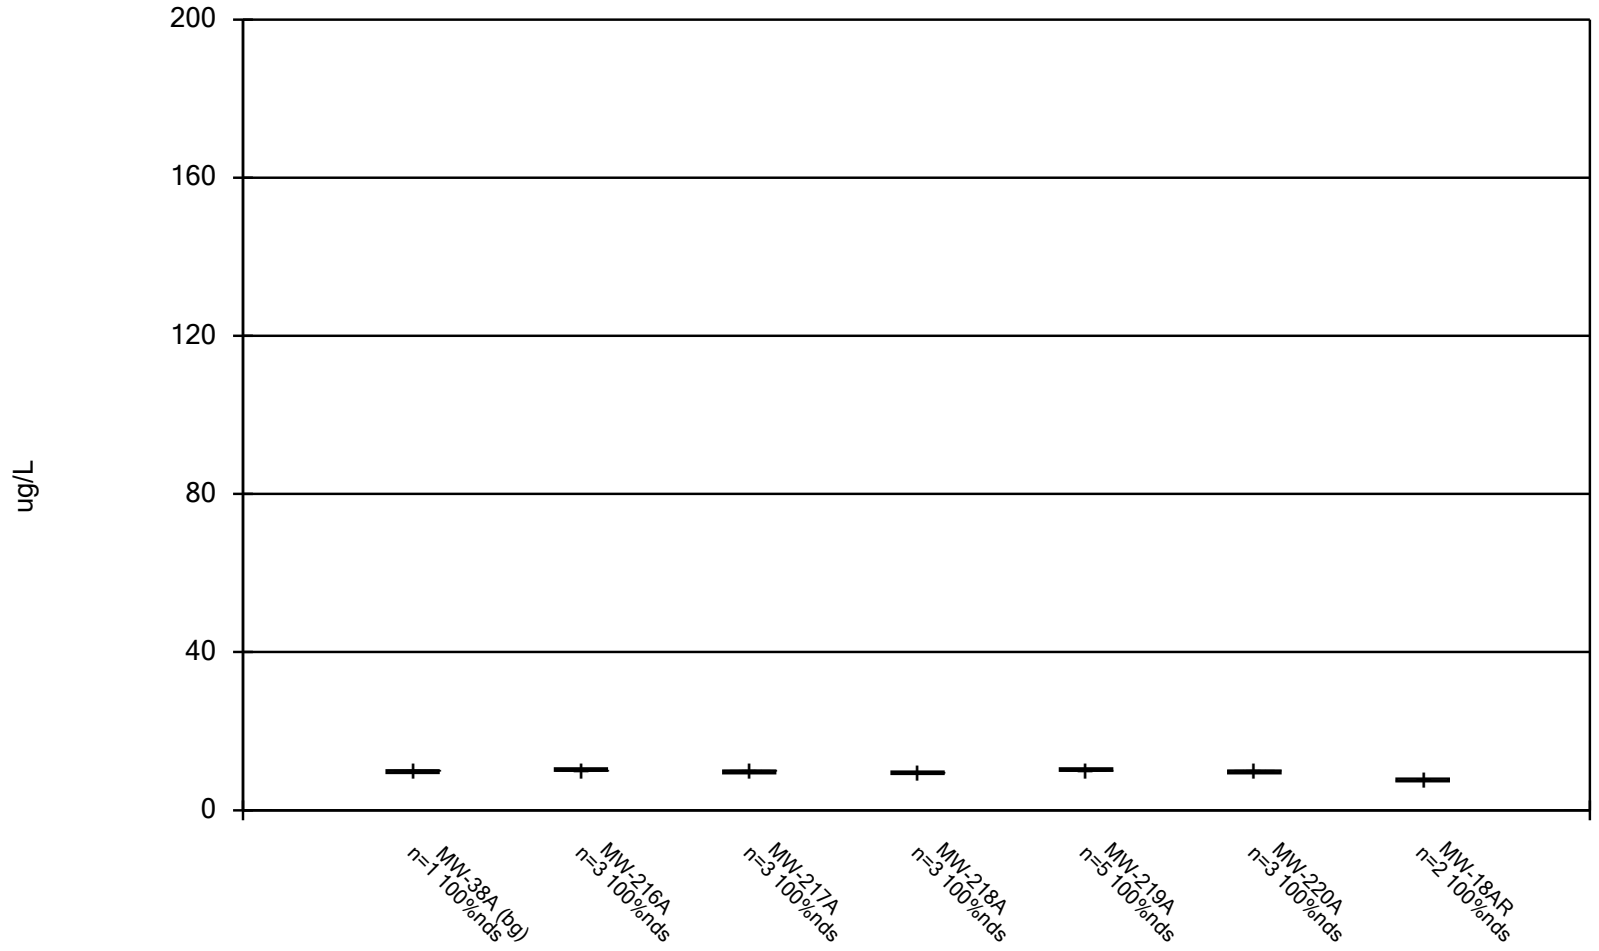


Constituent: Benzyl alcohol Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot

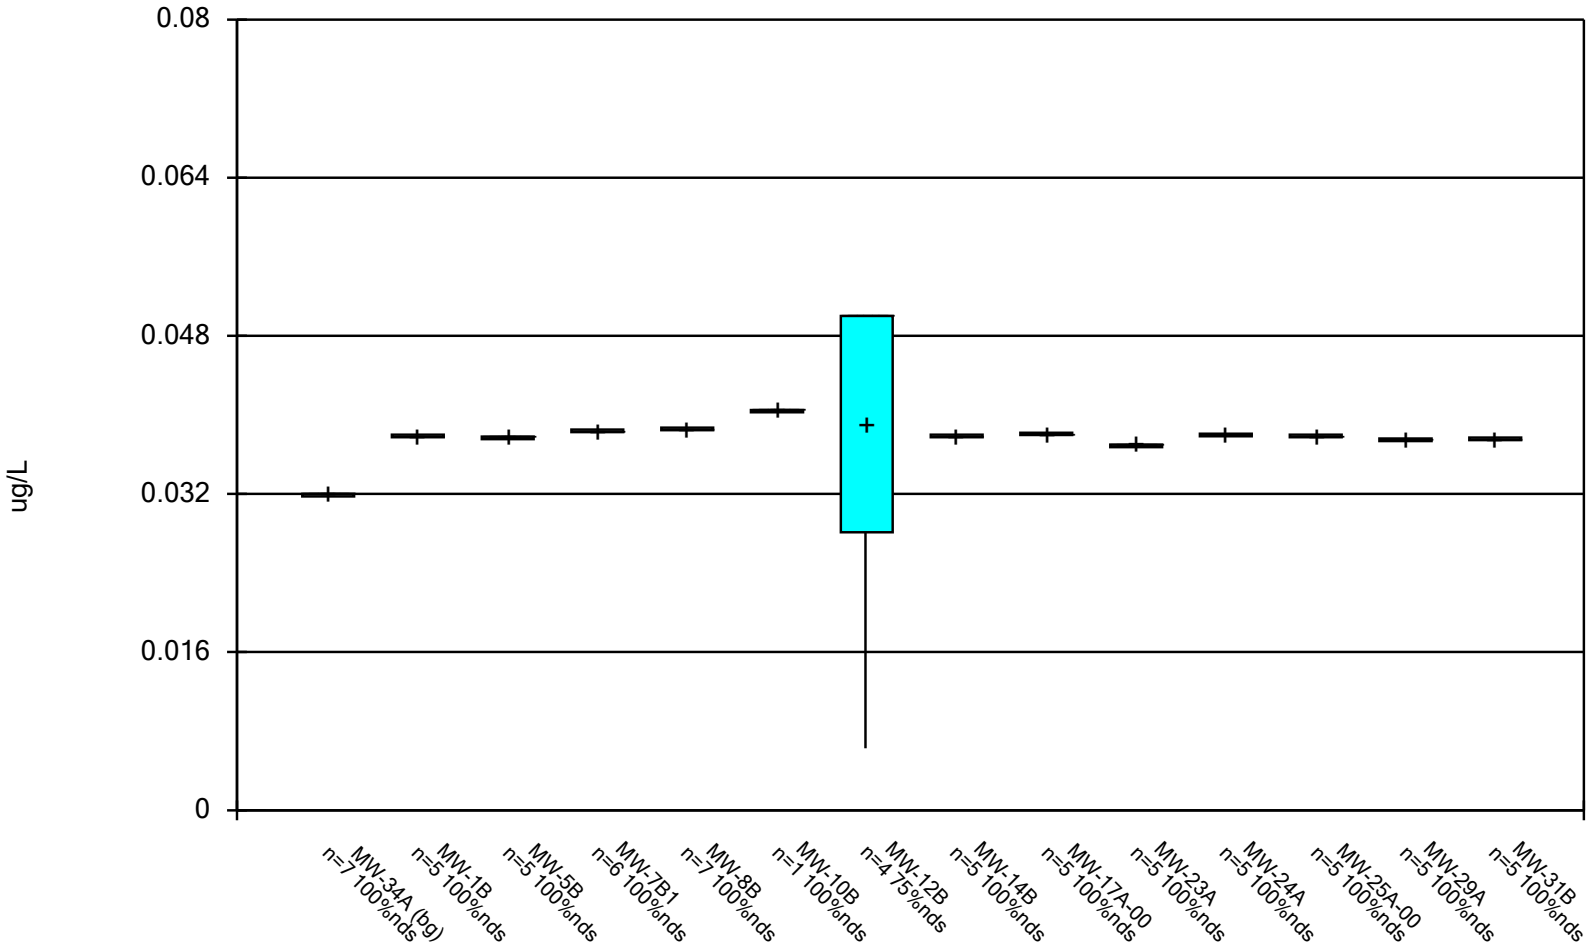


Constituent: Benzyl alcohol Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Box & Whiskers Plot



Constituent: Beta-BHC Analysis Run 7/14/2025 12:10 AM View: 06A_MW_Organics_PL

Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG

Sen's Slope Estimator

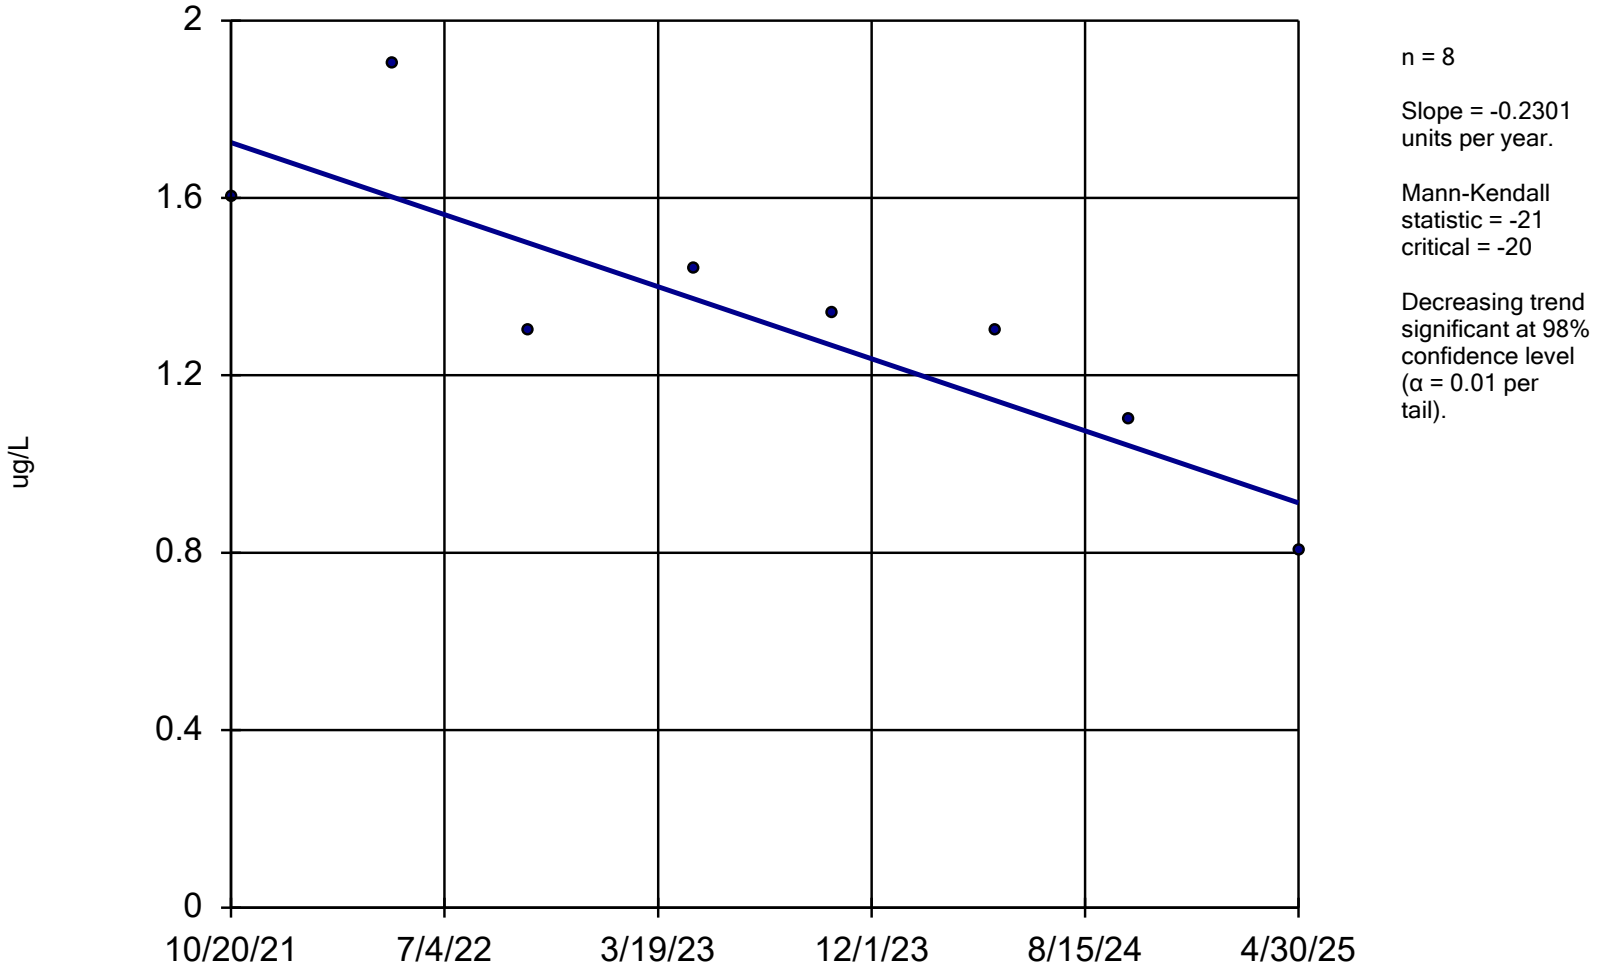
MW-18AR



n = 8

Slope = -0.2301 units per year.

Mann-Kendall statistic = -21
critical = -20

Decreasing trend significant at 98% confidence level (α = 0.01 per tail).

Groundwater Monitoring Wells –

Prediction Limits

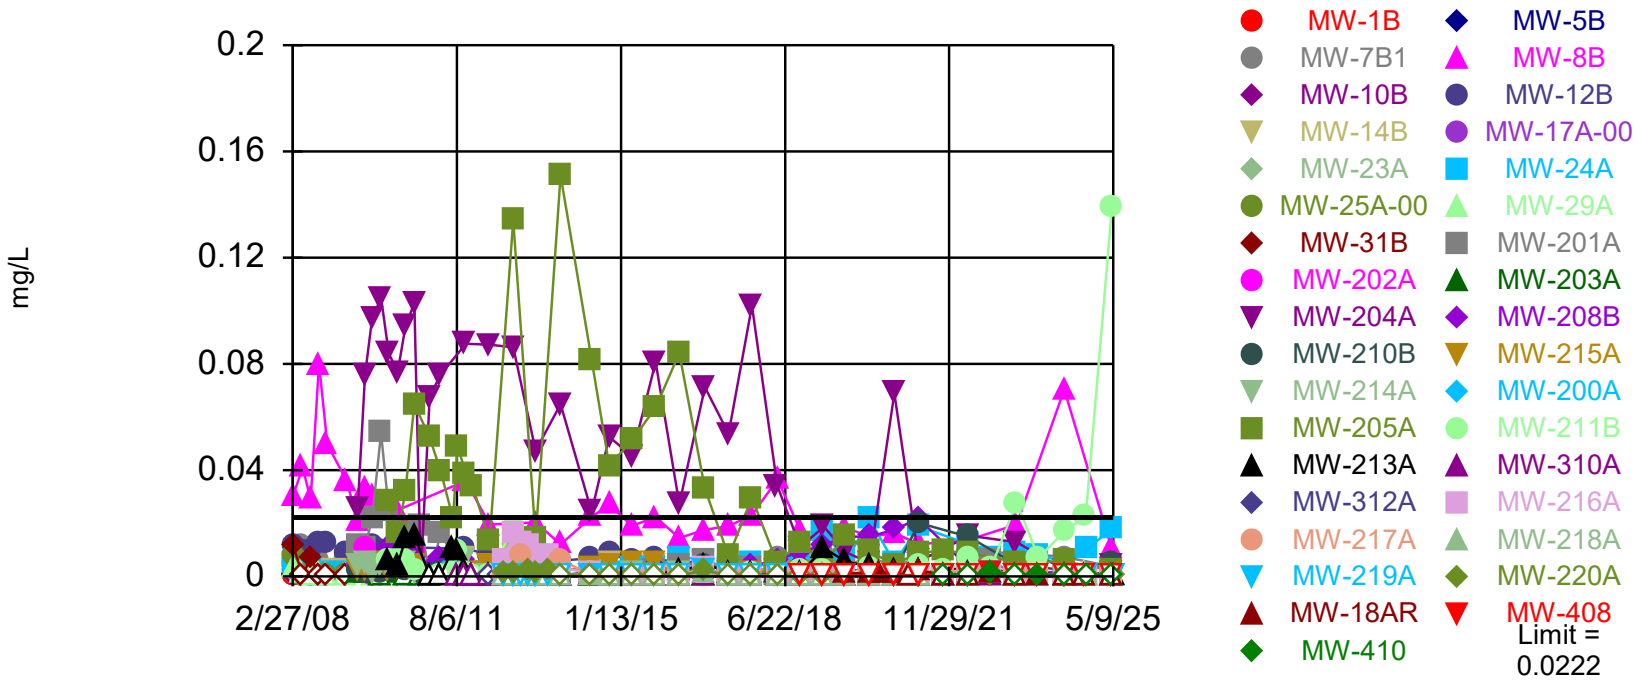
This page intentionally left blank.

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Exceeds Limit: MW-211B

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 90 background values. 70% NDs. Annual per-constituent alpha = 0.01901. Individual comparison alpha = 0.0002285 (1 of 2). Comparing 35 points to limit. Assumes 7 future values.

Constituent: Arsenic Analysis Run 7/13/2025 9:12 PM View: 05A_MW_Inorganics_PL

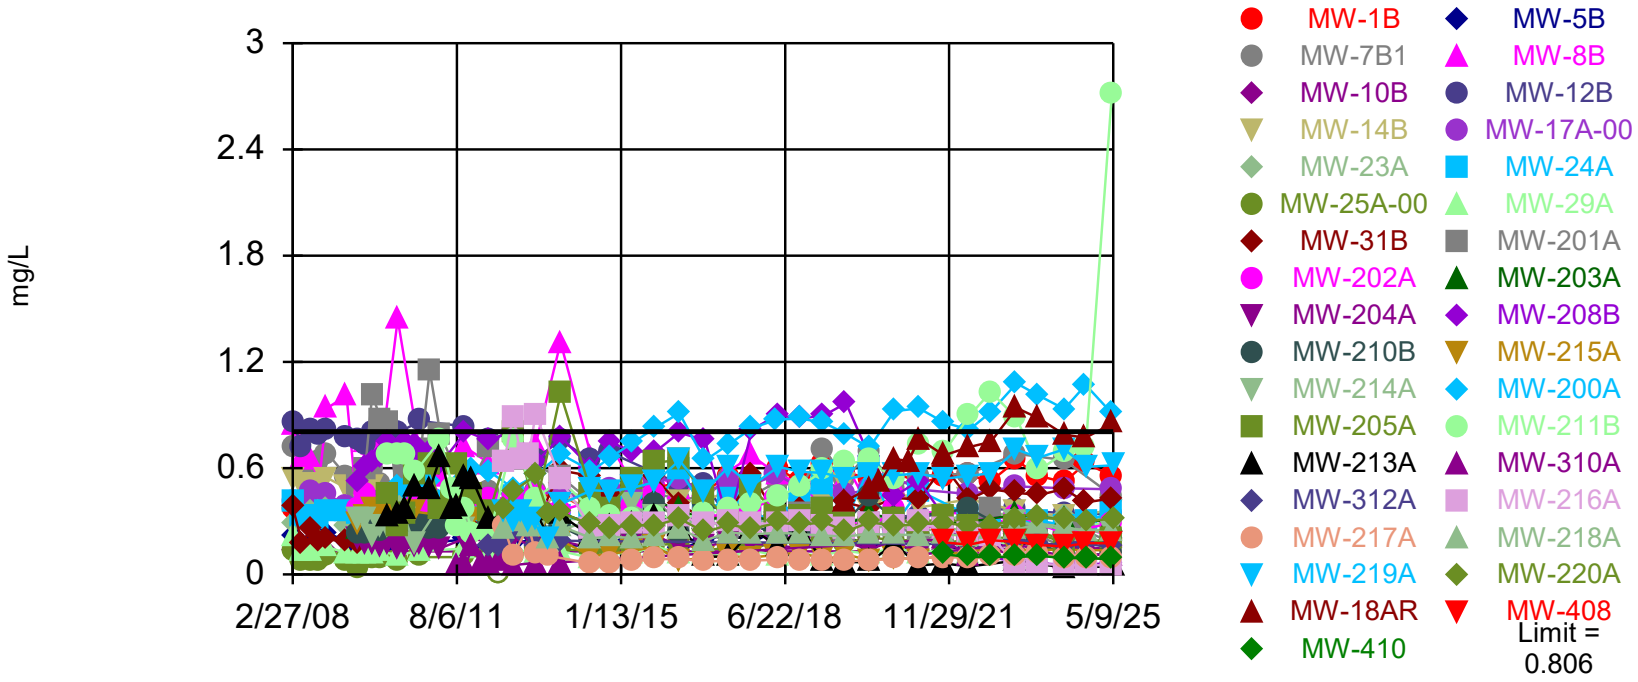
Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Exceeds Limit: MW-200A, MW-211B, MW-18AR

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.01 alpha level. Limit is highest of 92 background values. Annual per-constituent alpha = 0.01833. Individual comparison alpha = 0.0002202 (1 of 2). Comparing 35 points to limit. Assumes 7 future values.

Constituent: Barium Analysis Run 7/13/2025 9:12 PM View: 05A_MW_Inorganics_PL

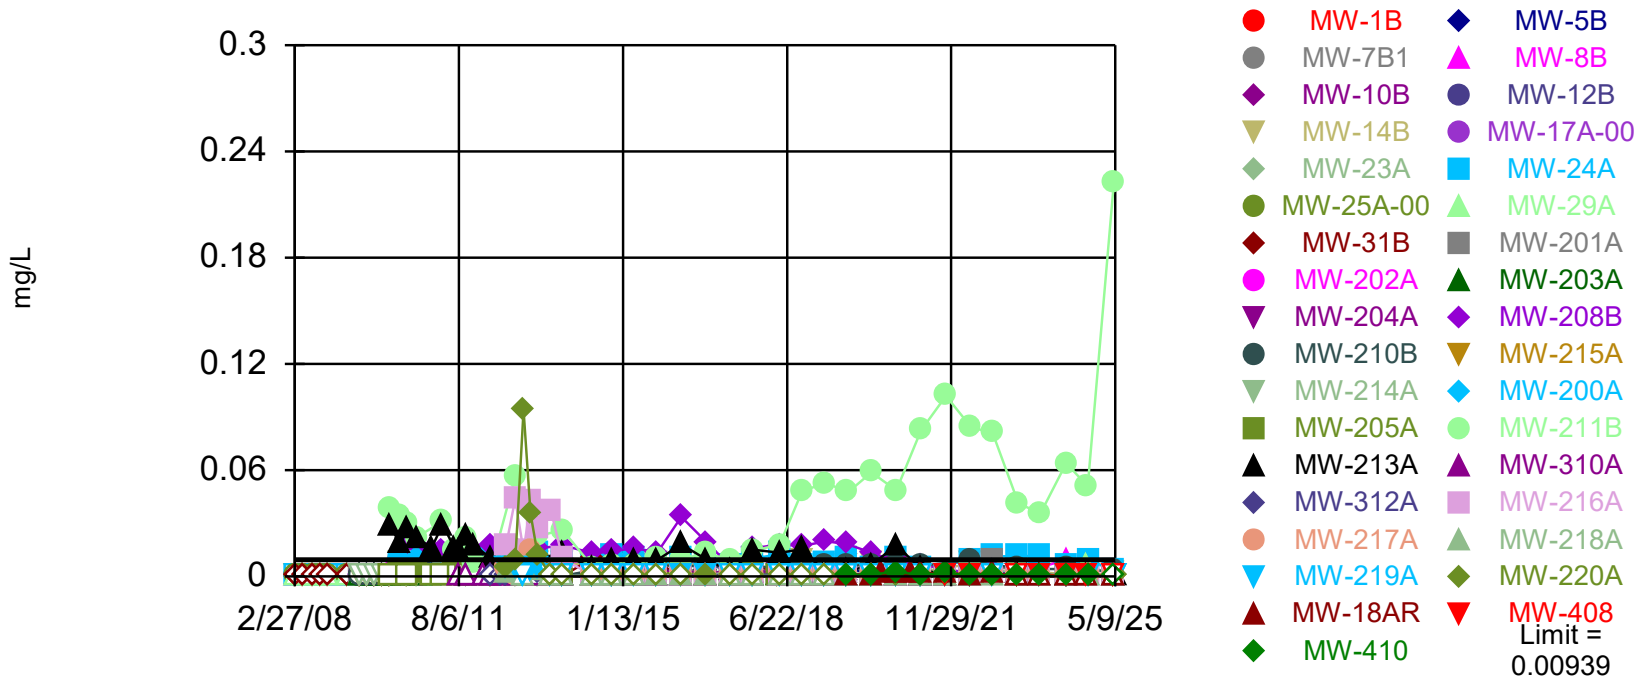
Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Exceeds Limit: MW-211B

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 92 background values. 57.61% NDs. Annual per-constituent alpha = 0.01833. Individual comparison alpha = 0.0002202 (1 of 2). Comparing 35 points to limit. Assumes 7 future values.

Constituent: Cobalt Analysis Run 7/13/2025 9:12 PM View: 05A_MW_Inorganics_PL

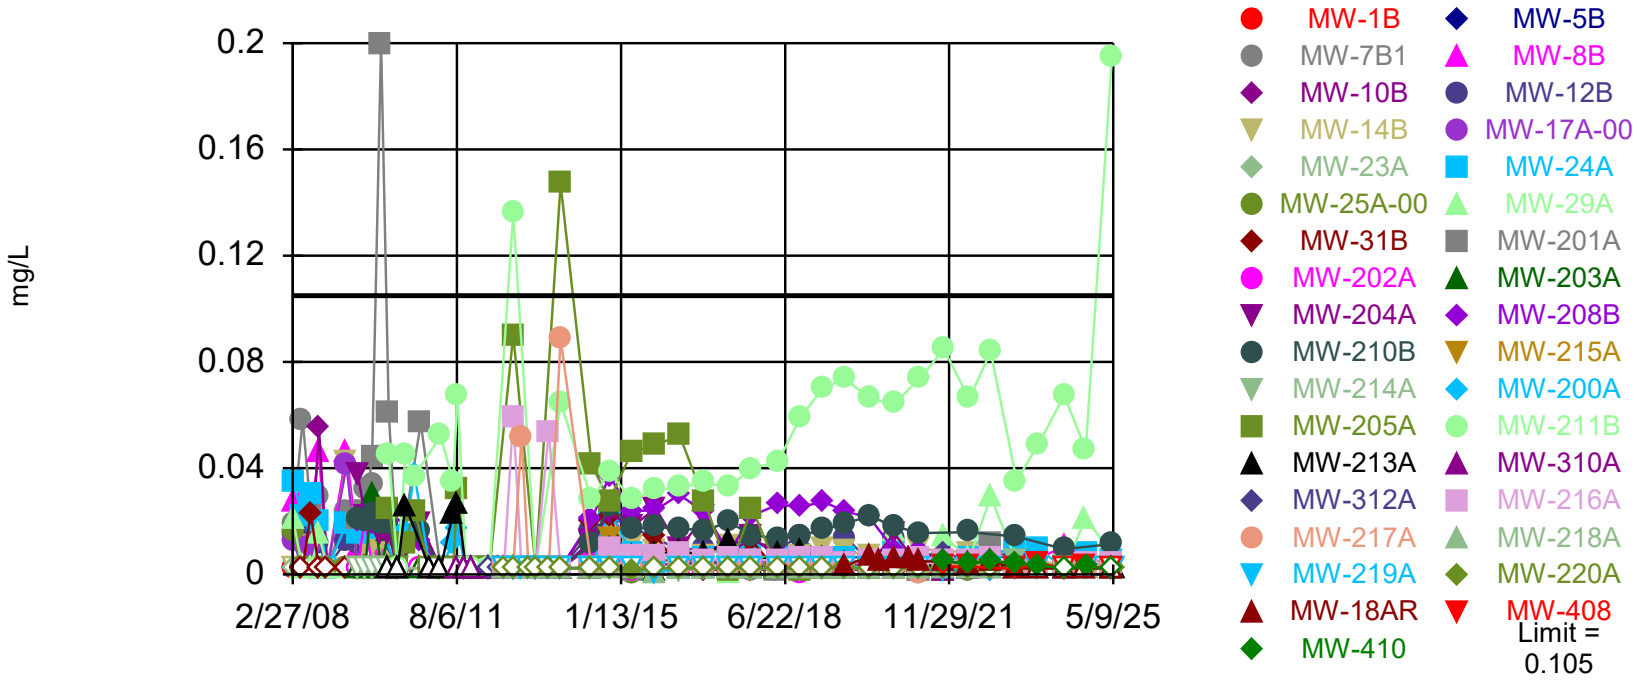
Iowa City Landfill Client: HDR Data: Iowa City Sanitary Landfill

Sanitas™ v.10.0.27 Software licensed to HDR, Inc. UG
Hollow symbols indicate censored values.

Exceeds Limit: MW-211B

Prediction Limit

Interwell Non-parametric



Non-parametric test used in lieu of parametric prediction limit because censored data exceeded 50%. Limit is highest of 89 background values. 66.29% NDs. Annual per-constituent alpha = 0.01948. Individual comparison alpha = 0.0002341 (1 of 2). Comparing 35 points to limit. Assumes 7 future values.

Spring 2025 Field Sampling Forms

This page intentionally left blank.

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: WE 1 Date: 4/30/25
Gradient (circle one): Up / Down Sampler: ZW/JF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): Yes No If No, explain:

Litter/Standing Water? (circle one): Yes No If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet):
Initial Static Water Level (feet):
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Dedicated Submersible Pump □ Other: □ QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	**Temperature (°C) 10%**	Dissolved Oxygen (mg/L)	**Conductivity (µS/cm) +/- 10%**	**pH (S.U.) +/- 0.1**	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
8:20	Purging start time				[redacted]		
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: liters / gallons):
Was well pumped/bailed dry?
Total Amount of Time Purged (minutes:seconds)
Average Purge Rate (mL/min)

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes / No
If yes, explain:

Additional Comments: 51° 8mph E wind cloudy

IDNR Form 542-1322

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: WT-2 Date: 4/30/24
Gradient (circle one): Up / Down Sampler: ZW/JF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): Yes No If No, explain:

Litter/Standing Water? (circle one): Yes No If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet):
Initial Static Water Level (feet):
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Dedicated Submersible Pump □ Other: □ QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	**Temperature (°C) 10%**	Dissolved Oxygen (mg/L)	**Conductivity (µS/cm) +/- 10%**	**pH (S.U.) +/- 0.1**	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
8:39	Purging start time				[redacted]		
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: liters / gallons):
Was well pumped/bailed dry?
Total Amount of Time Purged (minutes:seconds)
Average Purge Rate (mL/min)

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes / No
If yes, explain:

Additional Comments: 51°
3mph E wind
n. clouds

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: WT-3
Date: 4/30/25
Gradient (circle one): Up / Down
Sampler: ZW/JF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): Yes No If No, explain:

Litter/Standing Water? (circle one): Yes No If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet):
Initial Static Water Level (feet):
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Dedicated Submersible Pump □ Other: □ QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	**Temperature (°C) 10%**	Dissolved Oxygen (mg/L)	**Conductivity (µS/cm) +/- 10%**	**pH (S.U.) +/- 0.1**	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
8:55	Purging start time				[redacted]		
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: liters / gallons):
Was well pumped/bailed dry?
Total Amount of Time Purged (minutes:seconds)
Average Purge Rate (mL/min)

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes / No
If yes, explain:

Additional Comments: 54° 9mph E winds Mi cloudy

IDNR Form 542-1322

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: WT-4 Date: 4/30/25
Gradient (circle one): Up / Down Sampler: ZW/JF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): Yes No If No, explain:

Litter/Standing Water? (circle one): Yes No If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet):
Initial Static Water Level (feet):
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Other: □ Dedicated Submersible Pump □ QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	**Temperature (°C) 10%**	Dissolved Oxygen (mg/L)	**Conductivity (µS/cm) +/- 10%**	**pH (S.U.) +/- 0.1**	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
9:18	Purging start time				[redacted]		
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: liters / gallons):
Was well pumped/bailed dry?
Total Amount of Time Purged (minutes:seconds)
Average Purge Rate (mL/min)

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes / No
If yes, explain:

Additional Comments: 550
9 mph E wind
M. cloudy

IDNR Form 542-1322

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: WT-9F
Date: 4/30/25
Gradient (circle one): Up / Down
Sampler: ZW/JF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): Yes No If No, explain:

Litter/Standing Water? (circle one): Yes No If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet):
Initial Static Water Level (feet):
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Dedicated Submersible Pump □ Other: □ QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	**Temperature (°C) 10%**	Dissolved Oxygen (mg/L)	**Conductivity (µS/cm) +/- 10%**	**pH (S.U.) +/- 0.1**	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
8:15	Purging start time				[redacted]		
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: liters / gallons):
Was well pumped/bailed dry?
Total Amount of Time Purged (minutes:seconds)
Average Purge Rate (mL/min)

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes / No
If yes, explain:

Additional Comments: 51° 8mph E wind cloudy

IDNR Form 542-1322

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: MW-1A
Date: 5/8/25
Gradient (circle one): Up / Down
Sampler: MW JF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): Yes No If No, explain:

Litter/Standing Water? (circle one): Yes No If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet): 29
Initial Static Water Level (feet): 10.88
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Other: □ Dedicated Submersible Pump X QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	Temperature (°C) 10%	Dissolved Oxygen (mg/L)	Conductivity (µS/cm) +/- 10%	pH (S.U.) +/- 0.1	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
7:25	Purging start time				[redacted]	[redacted]	10.88
7:28	10.9	16.5	1866	6.44			12.15

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	Temperature (°C) 10%	Dissolved Oxygen (mg/L)	Conductivity (µS/cm) +/- 10%	pH (S.U.) +/- 0.1	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
14:23	Purging start time				[redacted]		13.21
14:26	12.9	11.4	929	6.24			13.80
14:29	12.8	9.0	918	6.26			13.87
14:31	12.5	7.9	909	6.27			13.91
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: liters / gallons): 2.1
Was well pumped/bailed dry? NO
Total Amount of Time Purged (minutes/seconds) 9
Average Purge Rate (mL/min) 233.33

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes / No
If yes, explain:

Additional Comments: 76° 7mph SE WIND p. cloudy

IDNR Form 542-1322

FORM FOR GROUNDWATER SAMPLING

Project:
Monitoring Well/Piezometer ID: MW-410 Date: 5/8/25
Gradient (circle one): Up / Down Sampler: MF

A. MW/PIEZOMETER CONDITIONS

Well/Piezometer Capped? (circle one): (Yes) No If No, explain:

Litter/Standing Water? (circle one): Yes (No) If Yes, explain:

B. GROUNDWATER ELEVATION MEASUREMENT (+/- 0.01 foot, MSL)

Measured Well Total Depth (feet): 28.35
Initial Static Water Level (feet): 11.75
Initial Groundwater Elevation (ft-amsl):
Equipment Used (check one): □ Dedicated Peristaltic Pump □ Dedicated Submersible Pump □ Other: ☒ QED

C. WELL PURGING

FIELD PARAMETERS [stabilization criteria] RECORD EVERY 3 MINUTES

Time	Temperature (°C) 10%	Dissolved Oxygen (mg/L)	Conductivity (µS/cm) +/- 10%	pH (S.U.) +/- 0.1	ORP (mV)	Turbidity (NTU)	Static Water Level (feet)
1354	Purging start time				[redacted]		11.75
13:57	10.5	32.4	679	9.13			13.00
14:00	10.0	21.7	669	9.10			14.08
14:03	10.0	19.3	669	9.09			14.19
	Pump shut-off, sample collected.						

Quantity of Water Removed from Well (circle units: (liters) / gallons): 3.2
Was well pumped/bailed dry? NO
Total Amount of Time Purged (minutes/seconds) 9
Average Purge Rate (mL/min) 355.55

D. WELL MAINTENANCE

Does the monitoring well/piezometer require any future maintenance? Yes (No)
If yes, explain:

ANALYTICAL REPORT

PREPARED FOR

Attn: Richard Wilson
HDR Inc
1917 S 67th Street
Omaha, Nebraska 68106

Generated 5/9/2025 3:47:39 PM

JOB DESCRIPTION

Iowa City Landfill Spring 2025

JOB NUMBER

310-305114-1

Eurofins Cedar Falls
3019 Venture Way
Cedar Falls IA 50613

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-305114-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/25/2025 3:10 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.8°C, 2.5°C and 3.3°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) associated with batch 310-453819 recovered outside of the control limits for Bromomethane (-23.3%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 310-453819/4).

Method 8260D: The initial calibration verification (ICV) result for batch 310-452932 was above the upper control limit. The affected analyte is: 1,1,1,2-Tetrachloroethane. Sample results were non-detects, and have been reported as qualified data.

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-452932 recovered above the upper control limit for 1,1,1,2-Tetrachloroethane (21.0%D). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is:(CCV 310-452932/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-452932 recovered above the upper control limit for Trichlorofluoromethane (28.0%D) and Dichlorodifluoromethane (43.3%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-452932/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 310-452882. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8270E: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 310-452882 and analytical batch 310-453792 recovered outside control limits for the following analyte(s): 1,4-phenylenediamine. 1,4-phenylenediamine have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 310-452882 and analytical batch 310-454001 recovered outside control limits for the following analyte(s): 1,4-phenylenediamine. 1,4-phenylenediamine have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method 8270E: The laboratory control sample (LCS) for preparation batch 310-452882 and analytical batch 310-454001 recovered outside acceptance limits for Chlorobenzilate. There was insufficient sample and holding-time remaining to perform a re-extraction or re-analysis; therefore, the data have been reported.

Method 8270E: The laboratory control sample duplicate (LCSD) for preparation batch 310-452882 and analytical batch 310-454001 recovered outside control limits for the following analytes: Kepone. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 310-454001 recovered above the upper control limit for Methyl parathion(21.5%D) and o-Toluidine(20.7%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-454001/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Herbicides
Method 8151A: The laboratory control sample duplicate (LCSD) for preparation batch 410-637791 and analytical batch 410-637983 recovered outside control limits for the following analytes: Silvex (2,4,5-TP). The associated sample(s) was re-prepared and/or re-analyzed outside holding time and and Silvex (2,4,5-TP) is within control limits in the LCSD. There is insufficient sample remaining for another extraction. The results are reported from the initial analysis. MW-14B (310-305114-1), MW-202A (310-305114-2), MW-17A-00 (310-305114-3), MW-214A (310-305114-4) and MW-204A (310-305114-5)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B: The continuing calibration verification (CCV) associated with batch 310-453583 recovered above the upper control limit for 4,4'-DDE. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Project/Site: Iowa City Landfill Spring 2025

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: HDR Inc
Job ID: 310-305114-1
Project/Site: Iowa City Landfill Spring 2025

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	1,2,4-Trichlorobenzene
8260D		Water	Allyl chloride
8260D		Water	Ethyl methacrylate

Laboratory: Eurofins Chicago

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Iowa	State	082	05-01-26

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: HDR Inc.

City/State: CITY | STATE | Project:

Receipt Information

Date/Time Received. DATE 4-25-25 TIME 1510 Received By: CGC

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☑ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other _____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID.

Multiple Coolers? ☑ Yes ☐ No *If yes:* Cooler # 1 of 3

Cooler Custody Seals Present? ☐ Yes ☑ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? HCl & Unpreserved ☑ Yes ☐ No *If yes.* Which VOA samples are in cooler? ↓

MW-214A, MW-204A

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: AA | Correction Factor (°C): 0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): 1.8 | Corrected Temp (°C): 1.8

• **Sample Container Temperature**

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e.g., bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE: If yes, contact PM before proceeding If no, proceed with login

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Quantitation Limit Exceptions Summary

Client: HDR Inc
Job ID: 310-305114-1
Project/Site: Iowa City Landfill Spring 2025

The requested project specific reporting limits listed below were less than laboratory standard quantitation limits (PQL) but greater than or equal to the laboratory method detection limits (MDL). It must be noted that results reported below lab standard quantitation limits may result in false positive/false negative values and less accurate quantitation. Routine laboratory procedures do not indicate corrective action for detections below the laboratory's PQL.

Method	Analyte	Matrix	Prep Type	Unit	Client RL	Lab PQL
8260D	1,2-Dibromo-3-Chloropropane	Water	Total/NA	ug/L	1.20	5
8260D	1,2-Dibromoethane (EDB)	Water	Total/NA	ug/L	0.340	1

JOB DESCRIPTION

Iowa City Landfill Spring 2025

JOB NUMBER

310-305203-1

Eurofins Cedar Falls
3019 Venture Way
Cedar Falls IA 50613

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-305203-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/29/2025 4:35 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 2.6°C, 2.9°C, 3.6°C, 4.4°C and 4.4°C.

GC/MS VOA
Method 8260D: The initial calibration verification (ICV) result for batch 310-453153 was above the upper control limit. The affected analyte is: 1,1,1,2-Tetrachloroethane. Sample results were non-detects, and have been reported as qualified data.

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-453153 recovered above the upper control limit for 1,1,1,2-Tetrachloroethane (22.7%D). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is:(CCV 310-453153/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-453153 recovered above the upper control limit for Trichlorofluoromethane (29.5%D) and Dichlorodifluoromethane (43.9%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-453153/4).

Method 8260D: The initial calibration verification (ICV) result for batch 310-453177 was above the upper control limit. The affected analyte is: 1,1,1,2-Tetrachloroethane. Sample results were non-detects, and have been reported as qualified data.

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-453177 recovered above the upper control limit for 1,1,1,2-Tetrachloroethane (24.5%D). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is:(CCV 310-453177/3).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-453177 recovered above the upper control limit for Trichlorofluoromethane (29.4%D) and Dichlorodifluoromethane (42.7%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-453177/4).

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-453661 recovered outside of the control limits for Bromomethane (-22.4%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 310-453661/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The laboratory control sample (LCS) for preparation batch 310-453201 and analytical batch 310-453747 recovered outside control limits for the following analytes: Benzo[a]pyrene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E: The continuing calibration verification (CCV) associated with batch 310-453747 recovered above the upper control limit for bis (2-chloroisopropyl) ether(20.6%D) and Bis(2-ethylhexyl) phthalate(23.9%D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-453747/2).

Method 8270E: The laboratory control sample and the laboratory control sample duplicate (LCS/LCSD) for preparation batch 310-453201 and analytical batch 310-453792 recovered outside control limits for the following analyte(s): 1,4-phenylenediamine. 1,4-phenylenediamine have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 310-453201 and analytical batch 310-453792 recovered outside control limits for the following analytes: Indeno[1,2,3-cd]pyrene and 1,4-phenylenediamine.

Method 8270E: The laboratory control sample (LCS) for preparation batch 310-453201 and analytical batch 310-453792 recovered outside control limits for the following analytes: Benzo[k]fluoranthene, Kepone and Methyl parathion. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E: The laboratory control sample duplicate (LCSD) for preparation batch 310-453201 and analytical batch 310-453792 recovered outside control limits for the following analytes: Kepone. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Herbicides
Method 8151A: The laboratory control sample (LCS) for preparation batch 410-638965 and analytical batch 410-639091 recovered outside control limits for the following analytes: 2,4-D, Silvex (2,4,5-TP) and 2,4,5-T. There is insufficient sample remaining to re-extract, therefore the data are reported. MW-6B (310-305203-4), MW-209B (310-305203-5), MW-212A (310-305203-7) and MW-207A (310-305203-8)

Method 8151A: The laboratory control sample (LCS) for preparation batch 410-638965 and analytical batch 410-639091 recovered outside control limits for the following analytes: 2,4-D, Silvex (2,4,5-TP) and 2,4,5-T. The associated sample(s) was re-prepared and/or re-analyzed outside holding time and the LCS is within control limits. Results are reported from the initial analysis. MW-8B (310-305203-1), MW-10B (310-305203-2) and MW-208B (310-305203-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
Method 8082A: Surrogate compounds were inadvertently omitted during the extraction process for the following QC: (LCS 310-453384/11-A), (240-222634-C-1-F MS) and (240-222634-C-1-G MSD) due to analyst error. The blank and samples all contained surrogate and passed recovery limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B: The continuing calibration verification (CCV) associated with batch 310-453587 recovered above the upper control limit for 4,4'-DDE. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8081B: Surrogate compounds were inadvertently omitted during the extraction process for the following QC: (LCS 310-453384/30-A), (310-304884-B-1-B MS) and (310-304884-B-1-C MSD) due to analyst error. The blank and samples all contained surrogate and passed recovery limits.

Method 8081B: The continuing calibration verification (CCV) associated with batch 310-453583 recovered above the upper control limit for 4,4'-DDE. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 6020B: The reference method requires samples to be preserved to a pH of <2. The following sample was received with insufficient preservation at a pH of >2: MW-212A (310-305203-7). The sample(s) was preserved to the appropriate pH in the laboratory.

Method 6020B: The reference method requires samples to be preserved to a pH of <2.The following sample was received with insufficient preservation at a pH of >2: MW-209B (310-305203-5). The sample(s) was preserved to the appropriate pH in the laboratory.

Method 6020B: The continuing calibration verification (CCV) associated with batch 310-454358 recovered above the upper control limit for Tin. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 7470A: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of >2: MW-209B (310-305203-5) and MW-212A (310-305203-7). The sample(s) was preserved to the appropriate pH in the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 9034_Calc: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 500-816040 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 9060A: The reference method requires samples to be preserved to a pH of <2. The following samples were received with insufficient preservation at a pH of >2: MW-6B (310-305203-4), MW-209B (310-305203-5), MW-212A (310-305203-7) and MW-207A (310-305203-8). The sample(s) was preserved to the appropriate pH in the laboratory.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Sample Summary

Client: HDR Inc
Job ID: 310-305203-1
Project/Site: Iowa City Landfill Spring 2025

Lab Sample ID	Client Sample ID	Matrix	Collected	Received
310-305203-1	MW-8B	Water	04/25/25 08:44	04/29/25 16:35
310-305203-2	MW-10B	Water	04/25/25 09:45	04/29/25 16:35

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*1	LCS/LCSD RPD exceeds control limits.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: HDR Inc
Job ID: 310-305203-1
Project/Site: Iowa City Landfill Spring 2025

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Water	1,2,4-Trichlorobenzene
8260D		Water	Allyl chloride
8260D		Water	Ethyl methacrylate

Laboratory: Eurofins Chicago

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Iowa	State	082	05-01-26

Laboratory: Eurofins Lancaster Laboratories Environment Testing, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Method Summary

Client: HDR Inc
Job ID: 310-305203-1
Project/Site: Iowa City Landfill Spring 2025

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CF
8270E	Semivolatile Organic Compounds (GC/MS)	SW846	EET CF
8015C	Nonhalogenated Organic using GC/FID (Direct Aqueous Injection)	SW846	EET CF
8081B	Organochlorine Pesticides (GC)	SW846	EET CF
8082A	Polychlorinated Biphenyls (PCBs) by Gas Chromatography	SW846	EET CF
8151A	Herbicides (GC)	SW846	ELLE
9056A	Anions, Ion Chromatography	SW846	EET CF
6020B	Metals (ICP/MS)	SW846	EET CF
7470A	Mercury (CVAA)	SW846	EET CF
9012B	Cyanide, Total andor Amenable	SW846	EET CF
9034	Sulfide, Acid soluble and Insoluble (Titrimetric)	SW846	EET CHI
9038	Sulfate (Turbidimetric)	SW846	EET CF
9060A	Organic Carbon, Total (TOC)	SW846	EET CF
I-3765-85	Residue, Non-filterable (TSS)	USGS	EET CF
3005A	Preparation, Total Metals	SW846	EET CF
3510C	Liquid-Liquid Extraction (Separatory Funnel)	SW846	EET CF
3511	Microextraction of Organic Compounds	SW846	EET CF
5030B	Purge and Trap	SW846	EET CF
7470A	Preparation, Mercury	SW846	EET CF
8151A	Extraction (Herbicides)	SW846	ELLE
9012B	Cyanide, Total and/or Amenable, Distillation	SW846	EET CF

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: HDR

City/State: CITY Omaha STATE NE Project:

Receipt Information

Date/Time Received: DATE 4.29.25 TIME 1635 Received By: PH

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☒ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☒ Yes ☐ No *If yes:* Cooler ID:

Multiple Coolers? ☒ Yes ☐ No *If yes:* Cooler # 1 of 6

Cooler Custody Seals Present? ☐ Yes ☒ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☒ No *If yes* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☒ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

MW-10B, 211B

Temperature Record

Coolant: ☒ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: AA Correction Factor (°C): 0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): Corrected Temp (°C).

• **Sample Container Temperature**

	CONTAINER 1	CONTAINER 2
Container(s) used:	PL 1L	
Uncorrected Temp (°C):	2.6	
Corrected Temp (°C):	2.6	

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE If yes, contact PM before proceeding. If no, proceed with login

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*
Unconfirmed	☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*
