The DNR has completed our review of the above-referenced report. Several recommendations were included in the report, please submit an action plan, including a schedule, for completion of these items.

In addition, please provide further discussion on the following items from the report as it is unclear where the locations of these items are and/or exactly what modifications are being proposed. Please note that these items need to be better understood by the DNR before proceeding with the recommendations.

1. Fit leachate drainage pipes with discharge fittings to allow hose connection during maintenance.
2. Engineered fixtures to contain leachate/jetting water mixture during jetting the drain lines.

The action plan and the discussion of the two items shall be submitted on or before December 21, 2025. Please let me know if you have any questions.

Thanks,
Brian
