## 2025 Agronomist Report

This report is in reference to Kraft Foods Industrial Sludge Land Application Project in Mason City, Iowa. Contact at the Mason City Plant is Utilities/Environmental Coordinator Dave Haage. Permit number is 17-SDP-06-95P-LAN

The application sites are currently in a corn-soybean crop rotation operated by Harold and Jason Pippert. The total number of acres at 22 application sites is 793 acres.

Sludge is hauled directly from the facility to the application site or to a store facility on Harold Pippert's home farm, located at 14480 Thrush Avenue, Mason City. Application is either injected or surface applied just prior to mechanical incorporation.

Lab analysis of the soil samples were analyzed by Minnesota Valley Testing Laboratories, Inc. in New Ulm, Minnesota. The interpretation of the soil sample test results was completed by myself and John England, Soils Agronomist.

Fields sampled for 2025 were: 1, 2, 3, 4, 5, 6, 8, 9, 10-11, 12A, 12B, 12C, 15A, 15B, 15C, 15D

Almost all the fields sampled show very high phosphorus levels. I suggest applying phosphate at the variable rate recommendations provided for fields 12B, 12C, & 15A. For all the other fields, I suggest applying only as much phosphate as the crop will use in a growing season or even a partial removal rate. I strongly recommend closely monitoring these fields to ensure nutrients are efficiently used in crop production and that phosphorus levels don't hinder the availability of other nutrients and hurt crop yield.

A good half of the acres sampled show optimum or higher potassium levels, but fields 2, 3, 4, 5, 6, 8, 9, 12A, 12B, 12C, 15A, & 15D show below optimum levels. I suggest applying potash at the variable rate recommendations provided.

Soil pH is also important in crop production as it affects the availability of nutrients in the soil. I suggest applying lime at the variable rate recommendations provided for fields 1, 4, 6, 8, 9, 10-11, 12A, 12B, 12C, 15A, 15B, 15C, & 15D to amend the soil to optimum pH levels if lime has not been applied in the last 3 years.

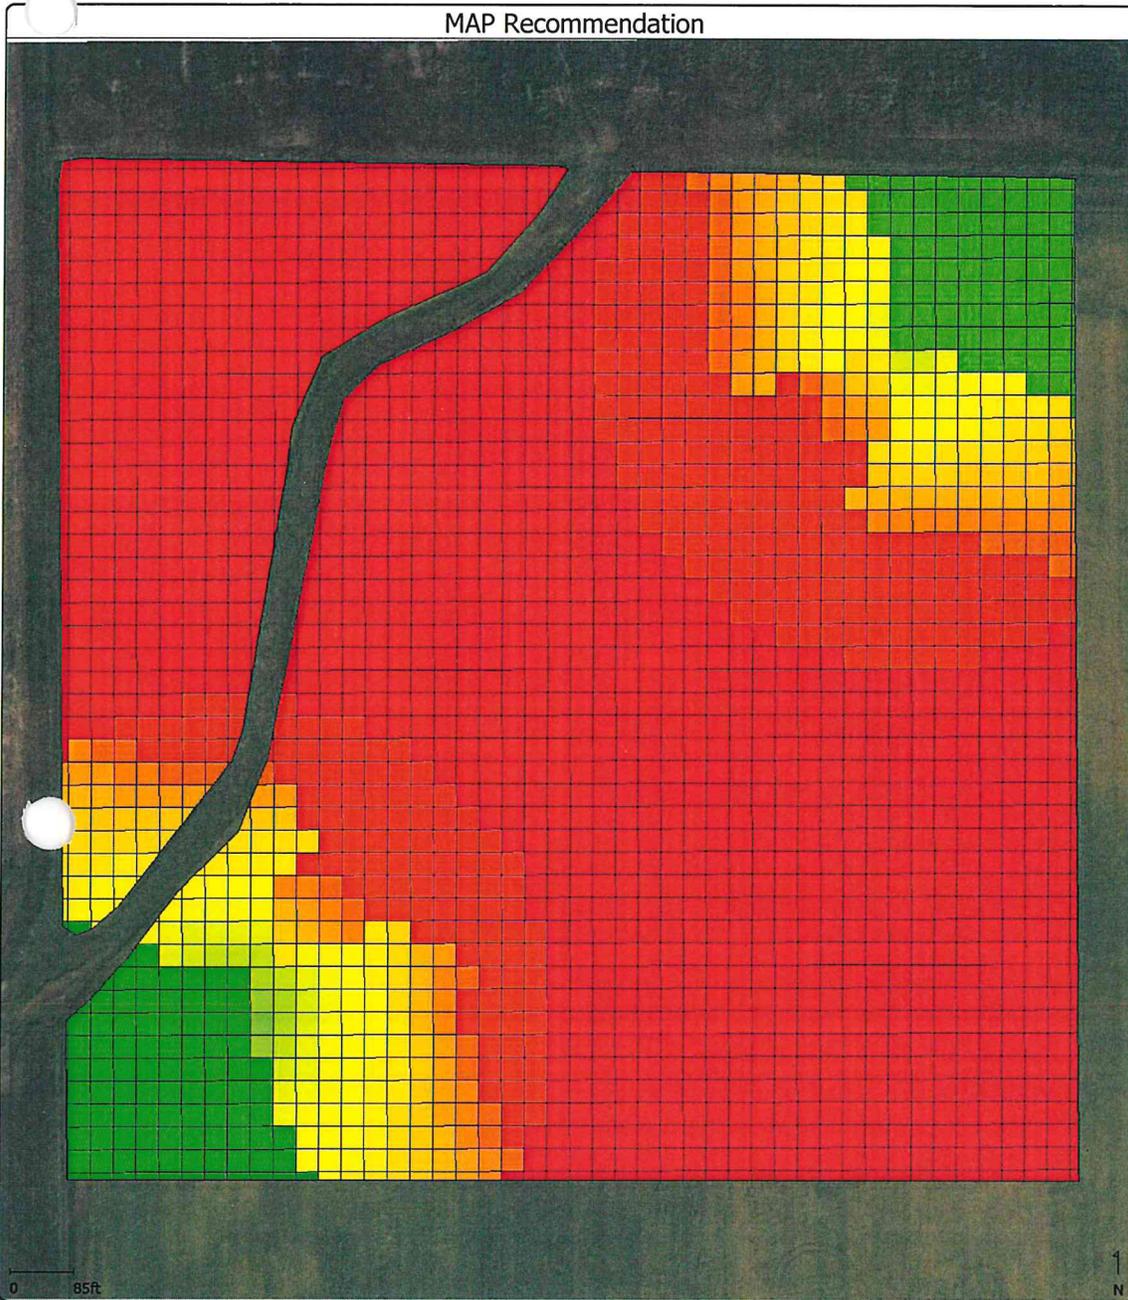

After interpreting the results, I feel that the management practices are being followed at the application sites and application is being performed to the current land application permits.

Brian Ritland, Agronomist CCA# 23358
