Re: 2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
201 West Main Street, Decorah, IA 52101
Permit No. 57-SDP-01-74P

Dear Michael Smith:

On behalf of the Winneshiek County Area Solid Waste Agency (Agency), Foth Infrastructure & Environment, LLC (Foth) is submitting the 2025 Annual Water Quality Report (AWQR) as required by Iowa Department of Natural Resources (IDNR) Permit No. 57-SDP-1-74P. The contents of this report are intended to satisfy the requirements of 567 Iowa Administrative Code (IAC) 113.10(5)c(1) and 113.10(6)d(1), related to recordkeeping and notification, and annual reporting requirements listed in IAC 113.10(10) (effective 12/10/07).

This report was prepared using the IDNR AWQR report format required by Permit Special Provision X.4.e. The Monitoring Well Maintenance and Performance Reevaluation Schedule and Summary, Methane Monitoring Program Report (MMPR), and Leachate Control System Performance Evaluation Report (LCSPER), have been incorporated directly into the AWQR as Tables 4, 5A, 5B, 12, 13A, and 13B.

Thank you for your attention to this matter. Please contact us at our numbers listed below if you have any questions or need additional information.

Sincerely,

Foth Infrastructure & Environment, LLC

Hannah Dubbs
Project Environmental Scientist

Certifications

I hereby certify that this document was prepared by me or under my direct supervision and that I am a qualified groundwater scientist as defined in 567 Iowa Administrative Code 113.10(1)d.

3/31/2026

Gina Wilming (date)
Iowa G.W.P. No. 2099.

My certification renewal date is
December 31, 2027.

For the purposes of 567 Iowa Administrative Code 113.10(1)d, a "qualified groundwater scientist" means a scientist or an engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields demonstrated by state registration, professional certifications, or completion of accredited university programs that enable that individual to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.

1. Executive Summary

Foth Infrastructure & Environment, LLC (Foth) was retained by the Winneshiek County Area Solid Waste Agency (Agency) to provide an annual report summarizing the groundwater quality and hydrogeologic monitoring activities at the Winneshiek County Sanitary Landfill during 2025. This 2025 Annual Water Quality Report (AWQR) was prepared using the Iowa Department of Natural Resources (IDNR) AWQR report format required by Permit Special Provision X.4.e. The Monitoring Well Maintenance and Performance Reevaluation Schedule and Summary, Methane Monitoring Program Report (MMPR), and Leachate Control System Performance Evaluation Report (LCSPER) have been incorporated directly into the AWQR as Tables 4, 5A, 5B, 12, 13A, and 13B.

1.1 Period of Report Coverage

This AWQR presents an evaluation of the groundwater, methane monitoring, and leachate collection system monitoring, maintenance, and performance activities conducted at the Winneshiek County Sanitary Landfill for the period of January 1 through December 31, 2025.

1.2 Report Priority

No actions or activities are on hold due to the completion of IDNR review or comment. Foth requests IDNR review and approval of the following:

- The background dataset adjustments, as further discussed in the Fall 2025 statistical evaluation provided in Appendix B and Table 14, are recommended for removal. Background dataset adjustments are recommended based on a review of replaced background well data, total suspended solids (TSS), single background detections, and/or reporting limits. A summary of the background data requested for removal is as follows:
    - Removal of MW-1R and MW-19 from the shallow and deep groundwater background data sets, respectively.
    - Removal of the September 2021 barium, cobalt, lead, and nickel concentrations in MW-19R due to correlation with TSS.
    - Removal of the September 2021 arsenic, barium, cadmium, chromium, cobalt, copper, lead, silver, and vanadium concentrations in MW-37A due to correlation with TSS and the single acetone detection.
    - Removal of the March 2022 arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, and vanadium concentrations in MW-19R due to correlation with TSS.
    - Removal of the June 2023 barium, cobalt, and copper concentrations in MW-19R due to correlation with TSS.
    - Removal of the November 2023 arsenic, barium, cadmium, cobalt, copper, lead, nickel, and vanadium concentrations in MW-1 due to correlation with TSS.
    - Removal of the October 2025 arsenic, barium, cobalt, and lead concentrations in MW-19R due to correlation with TSS.
    - Removal of the December 2024 arsenic, barium, cobalt, and nickel concentrations in MW-37A due to the single benzene detection.
    - Removal of the November 2014 barium, cobalt, copper, nickel, and vanadium concentrations in MW-1 due to the single chlorobenzene detection.

- Removal of the November 2014 through June 2019 cadmium results in SW-1 due to an elevated reporting limit.

- As further addressed in the Fall 2025 statistical evaluation provided in Appendix B, the October 2025 arsenic concentration at background monitoring well MW-37A was above the groundwater protection standard (GWPS). Therefore, it is recommended that the background GWPS for arsenic in the shallow groundwater system be established at 0.22 milligrams per liter (mg/L).

- As further addressed in the Fall 2025 statistical evaluation provided in Appendix B, the site-specific cobalt GWPS was applied to the deep groundwater system in addition to the shallow groundwater system; however, the cobalt prediction limit in the deep groundwater system is below the 567 Iowa Administrative Code (IAC) Chapter 137 Statewide Standard for a Protected Groundwater Source of 0.0021 mg/L. Therefore, it is recommended that 0.0021 mg/L be used as the GWPS for the deep groundwater system.

- Amend the Permit and Methane Monitoring Program Plan to include the following:

    - Removal of MWII-3, MW-5AR, MW-12, MW-23, and MW-28A, as these wells have been abandoned.

    - Removal of GP-01 through GP-09, as these probes are silted in and do not provide adequate data.

    - Replacement of MW-12A with step-out location MW-39A.

    - Removal of MW-3, MW-18, and MW-19R, as the well screens are continuously submerged.

    - Addition of MW-26A, MW-32A, MW-33A, MW-37A, MW-38A, and MW-46A.

    - Note that an updated Methane Monitoring Plan will be submitted with the Sanitary Disposal Project (SDP) permit renewal application due by September 22, 2026. Additional review of the methane monitoring network will be conducted at that time.

- Amend the Permit and the Leachate Monitoring Plan to remove MH-15, GU5-MH, and GU-2 as leachate monitoring locations. MH-15 is a leachate line manhole outside the waste limits and does not provide information regarding the head on the liner. GU5-MH is an underdrain location for Cell 5, which is adequately monitored by GU-1. GU5E-2 and GU-2 are underdrain locations for Cell 5 EXP that are adequately monitored by GU-5E-1.

Several changes to the statistical methodology were implemented beginning with the Fall 2025 statistical evaluation (Appendix B) and are summarized below.

- The laboratory reporting limit was used as the practical quantitation limit (PQL), and half the reporting limit was used for non-detect data. These changes are consistent with the protocols for handling non-detect data outlined in the *Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities, Unified Guidance* (USEPA, 2009).

- The background data sets previously included data from October/November 2014 through the end of the preceding year. However, utilizing background from October/November 2014 through the most recent monitoring event is recommended.

- When evaluating distributional assumptions for calculating prediction limits and confidence intervals, use of the Kaplan-Meier adjustment is recommended when there are 50% to 85% detects in the background data set.

The Hydrologic Monitoring System Plan (HMSP) will be updated with the SDP permit renewal application due by September 22, 2026 to reflect these changes.

1.3 Site Status and Applicable Rules

The landfill is located in Winneshiek County approximately 5 miles southeast of Decorah in Section 9, Township 97 North, Range 7 West at 2000 140th Ave, Decorah, IA 52101.

Original Areas 1, 2, and 3 are closed either by soil final cover (slopes greater than 5%), composite final cover, or by the abutment liner. Original Cell 4 is also closed by the abutment liner, except for the south and east side slopes, which have 2 feet of temporary cover and dense vegetation. The active Municipal Solid Waste (MSW) incorporates the abutment liner, the original Cell 5 Expansion Area, and original Cell 5 Phases I, II, and III. The active MSW cell is referred to as C5 EXP in all documents and drawings, beginning with the Solid Waste Disposal Permit Renewal in 2017.

Groundwater monitoring and reporting activities were conducted in accordance with Special Provision X.4.b of the permit and 567 IAC 113.10. Details regarding the statistical methods utilized are included with the statistical reports in Appendix B. Monitoring well maintenance and performance reevaluation was conducted in accordance with Special Provision X.4.c. and d. of the permit and 567 IAC 113.10(2)f.

The leachate collection system monitoring, maintenance, and performance activities were conducted in accordance with Special Provision X.2.d and 567 IAC 113.7(5)b.

Methane monitoring and reporting activities were conducted in accordance with Special Provision X.6 and 567 IAC 113.9(2).

2. Site Background

2.1 Site History

Nishna Sanitary Services initially developed the landfill in 1974. The landfill was privately owned and operated until 1991 when the Agency purchased the facility. Since that time, the landfill has served as the primary disposal site for the waste generated in the Winneshiek Service Area. A site map depicting the characteristic of the landfill and surrounding vicinity is provided in Figure1.

Waste disposal at the landfill began in 1974 with the development of original Area 1. Original Area 1 was constructed without a liner or leachate collection system, but a leachate toe drain was installed around the perimeter in 1993.

Original Area 2 was developed from about 1982 and was used until 1994, except for some construction and demolition (C&D) disposal that continued in a small portion of original Area 2 until 2000-02. Original Area 2 has no liner or leachate collection system but has a leachate toe drain along the western perimeter. A landfill gas collection trench extends south of original Area 2 and original Area 3.

Development of original Area 3 began in about 1988 and continued until 1994. Original Area 3 was constructed without a liner or leachate collection system, but it has a leachate toe drain along the eastern side and a landfill gas collection trench along the south side.

Development of original Cell 4 began in 1994. It is constructed with a 4-foot clay liner and leachate collection system.

Development of original Cell 5 began in 1996. It is constructed with a composite liner and leachate collection system.

In 2016, the Agency completed the 2016 Closure and Capital Improvements Project (2016 Project). The 2016 Project included a 20-acre abutment liner over the east side of original Areas 1 and 3, and original Cell 4, and a new 1.5-acre cell in the gap between original Area 1 and original Cell 5, Phase II, called the

original Cell 5 Expansion Area. Also, the 2016 Project included the final closure on the remaining footprint of original Areas 1, 2, and 3. Slopes greater than 5 percent have a 4-foot soil final cover, and the remaining portions are closed with either a composite final cover system or are covered with the abutment liner. Original Cell 4 is effectively closed as it is mostly covered by the abutment liner, except for the south and east side slopes. Those slopes have 2 feet of temporary cover and are densely vegetated. The active cell, including the abutment liner, the original Cell 5 Expansion Area, and the original Cell 5, is now known as C5 EXP. Final closures of the C5 EXP, including the south and east side-slopes of original Cell 4, will be a composite final cover system with passive gas vents.

The final part of the 2016 Project was a 4.5-million-gallon leachate lagoon. From this lagoon, the landfill staff can recirculate, evaporate, and loadout the leachate. The lagoon collects leachate from the west and central toe drains, original Cell 4, original Cell 5, and C5 EXP. The Agency installed diversion manholes with valving to either discharge underdrain groundwater to the creek or discharge to the lagoon for the groundwater underdrains at original Cell 5, the C5 EXP, and the lagoon itself. The C5 EXP groundwater discharge (GU-2) and the combined original Cell 5 and lagoon groundwater discharge (GU-1) are sampled as part of the current detection monitoring program.

Winneshiek County currently recirculates the leachate from the lagoon. The leachate is pumped from the lagoon to a sprinkler system on C5 EXP. The leachate is recirculated in the warm months if there is less than 1 foot of leachate measured at the leachate piezometers. Also, Winneshiek County operates an evaporator in the south bay of the lagoon to evaporate the leachate. The evaporator can be moved around the north half of Lagoon Bay No. 2 to ensure that mist drift is not leaving the lagoon boundary. The evaporator is not operated when the wind speed exceeds 15-MPH.

2.2 Geology and Hydrogeology

The subsurface geologic formations encountered during installation of site wells at the landfill are included on the boring logs and monitoring well/piezometer documentation forms (Iowa DNR Form 542-1277) presented in Appendix A of the *2024 UPDATE Winneshiek Hydrologic Monitoring System Plan* (AECOM, 2024). Boring and well locations are shown on Figure 4 of the HMSP. The site geology and hydrogeology of the landfill have been comprehensively investigated in several studies, including the *Report for the Phase II Hydrogeologic Investigation at the Winneshiek County Sanitary Landfill* (Brown, et al., 1990), *Winneshiek County Sanitary Landfill Hydrologic Monitoring System Plan Update* (Rust E&I, 1997), and *2023 UPDATE Winneshiek Hydrologic Monitoring System Plan* (AECOM, 2023), and will be summarized here.

The landfill is located on a generally eastward sloping upland that is part of an interfluve bordered on the east by an unnamed, northward flowing tributary to the Trout River and on the northwest by a different unnamed, northward flowing drainageway that drains to the Trout River. In this part of Winneshiek County, thin Quaternary-age deposits overlie Ordovician-age bedrock.

In uplands, the thin Quaternary deposits include loess overlying either remnants of Pre-Illinoian-age glacial diamicton (“till”) that locally contains isolated lenses of fluvioglacial material or Quaternary-age colluvium. On side slopes, the loess overlies either Quaternary-age colluvium or, where the colluvium is absent, bedrock. In lowlands, the thin Quaternary-age deposits consist of fine-grained alluvium. In portions of the site area, such as east of original Cell 4, landfill construction activities have removed the Quaternary deposits, and fine-grained, construction-derived soil fill overlies Ordovician-age Maquoketa Formation bedrock. Fine-grained, construction-derived soil fill overlies loess east of original Cell 5.

The Quaternary-age deposits overlie a gently dipping Ordovician-age bedrock sequence that consists of the upper and lower Elgin Member of the Maquoketa Formation and the underlying Galena Formation. In parts of the eastern and northeastern portion of the site, the Maquoketa Formation is eroded away and absent. In that area, the Galena Formation is the uppermost bedrock unit.

Groundwater is monitored in one water-bearing zone: (1) the shallow groundwater measured by the water table, and (2) the deep groundwater measured in the Ordovician-age upper and lower Elgin Member of the Maquoketa Formation and, where the Maquoketa is absent, the Ordovician-age Galena Group Dubuque Formation. Shallow wells are screened in different geologic units because the water table occurs in successively different stratigraphic horizons downslope. The water table and bedrock groundwater are interconnected and act as one water-bearing zone transitioning to only water table on the eastside of the landfill with groundwater discharging to tributary of Trout River.

2.3 History of Groundwater Corrective Action

An Assessment of Corrective Measures (ACM) was initiated in August 2022 following the exceedance of the cobalt GWPS of 0.0021 mg/L at MW-29A, MW-31A, and MW-35. The revised *2024 ACM Report* was provided as Attachment E of the "IDNR Comment Letter Response" (AECOM, 2025b) and was subsequently approved in the letter dated July 15, 2025 (IDNR, 2025). The *2024 ACM Report* (AECOM, 2025b) recommended Monitored Natural Attenuation (MNA) as the selected remedy for cobalt in MW-29A, MW-31A, and MW-35 and noted a site-specific GWPS of 0.0034 mg/L had been established. Details supporting the site-specific cobalt GWPS are provided in the *2024 UPDATE Winneshiek Hydrologic Monitoring System Plan* (AECOM, 2024), which was approved in the letter dated October 29, 2024 (IDNR, 2024).

A public meeting to present and discuss the results of the revised *2024 ACM Report* (AECOM, 2025b) was held on October 13, 2025 and the meeting records were submitted to IDNR on November 20, 2025 (Foth, 2025b). The *Remedial Selection Report* (Foth, 2025c) was submitted on December 11, 2025, selecting MNA as the remedy and outlining the corrective action schedule. The *Remedial Selection Report* (Foth, 2025c) was approved in the letter dated Jan. 6, 2026 (IDNR, 2026).

3. Quality Assurance/Quality Control Summary

In 2025, field blanks, field duplicates, and trip blanks were collected and analyzed at the frequencies listed in the *2024 UPDATE Winneshiek Hydrologic Monitoring System Plan* (AECOM, 2024). Prior to October 2025, data validation was not conducted routinely and was not included in the *2024 UPDATE Winneshiek Hydrologic Monitoring System Plan.* Beginning in October 2025, data validation was conducted in accordance with the Standard Operating Procedure (SOP) included in Appendix A. The HMSP will be updated with the permit renewal application in 2026 to incorporate the data validation protocol and the modifications identified in the Report Priority. Data validation reports detailing any resampling, data qualifiers added per data validation, and an overall assessment of the data are included in Appendix A.

In October 2025, the overall data assessments indicated that method criteria, precision, accuracy, representativeness, comparability, completeness, and suitability for intended use were acceptable. In 2025, resampling was considered based on the data quality for the Fall 2025 sampling event. As further addressed in the data validation report (Appendix A), there were multiple extraction and analysis hold time exceedances identified. Professional judgement was utilized, and neither qualification nor resampling was recommended because the preparation or analysis hold times were only slightly exceeded.

3.1 Sample Turbidity

Low-flow and no purge sampling techniques were continued in 2025. The sampling methodology utilized was consistent with minimizing turbidity and total suspended solids (TSS) in the groundwater samples.

As indicated in the Report Priority, the following background data set adjustments are recommended based on the Fall 2025 evaluation of TSS.

- Removal of the September 2021 barium, cobalt, lead, and nickel concentrations in MW-19R due to elevated TSS (182 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.

- Removal of the September 2021 arsenic, barium, cadmium, chromium, cobalt, copper, lead, silver, and vanadium concentration in MW-37A due to the elevated TSS (159 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.

- Removal of the March 2022 arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, and vanadium concentrations in MW-19R due to the elevated TSS (834 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.

- Removal of the June 2023 barium, cobalt, and copper concentrations in MW-19R due to elevated TSS (109 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.

- Removal of the November 2023 arsenic, barium, cadmium, cobalt, copper, lead, nickel, and vanadium concentrations in MW-1 due to elevated TSS (276 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.

- Removal of the October 2025 arsenic, barium, cobalt, and lead concentrations in MW-19R due to the elevated TSS (151 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.

Several downgradient and delineation monitoring wells had TSS concentrations greater than the 5 mg/L level for satisfactory sample quality. However, TSS at most wells only slightly exceeded the 5 mg/L, which indicates that turbidity was not significantly impacting the downgradient data.

4. Conclusions and Recommendations

4.1 2025 Data Evaluation Summary

4.1.1 Groundwater

Resampling was conducted in February 2025 for cadmium in MW-4, barium in MW-7A, and nickel in MW-42A due to prediction limit exceedances identified in Fall 2024. The results of the February 2025 sampling event and field documentation were reported in the *2024 Annual Water Quality Report* (AECOM, 2025a). The February 2025 retest did not confirm the prediction limit exceedances for cadmium in MW-4 and barium in MW-7A; however, nickel in MW-42 was confirmed as a statistically significant increase (SSI) over background.

In June 2025, semiannual groundwater sampling was conducted as indicated in Table 2. During the June 2025 sampling event, deep groundwater location MW-11 was dry or had insufficient volume for sample collection. In the *2024 Annual Water Quality Report* (AECOM, 2025a), MW-24A was requested to be designated as a water-level-only location; therefore, a sample was not collected in June 2025. Although the well is frequently dry, it is recommended that MW-24A remain in the assessment monitoring program and be sampled when there is sufficient volume. As noted in correspondence with the IDNR in the email dated August 12, 2025 (Foth, 2025a), AECOM recommended resampling for barium, cobalt, copper, lead, 2-butanone, and acetone in MW-33A, and for cadmium and zinc in MW-44A prior to the Fall 2025 sampling event. However, since these were in assessment monitoring or corrective action monitoring, these constituents were declared SSIs, and retests were not conducted.

In October 2025, groundwater sampling was conducted as indicated in Table 2. During the October 2025 sampling event, surface water location SW-1; shallow groundwater locations GU-1, GU-2, MW-24A, and MW-101; and deep groundwater locations MW-11, MW-22 were dry or had insufficient volume for sample collection. In October 2025, monitoring locations sampled were also analyzed for the geochemical parameters as outlined in the *2024 ACM Report* (AECOM, 2025b). Analysis of the geochemical parameters was not included in this evaluation. As indicated in the *Remedial Selection Report* (Foth, 2025c), biennial monitoring of geochemical parameters will be conducted at the corrective action, delineation, and background monitoring locations. The IDNR approved the *Remedial Selection Report*

(Foth, 2025c) in their letter dated January 6, 2026 (IDNR, 2026). The next biennial geochemical monitoring event will occur in Fall 2027.

MW-7A and MW-46A moved to assessment monitoring in Summer 2023 and Fall 2024, respectively; however, MW-7A had only undergone one complete Appendix II sampling event, and MW-46A had yet to be sampled for the full Appendix II list. Therefore, MW-7A and MW-46A were sampled for the full Appendix II list in October 2025. During the initial full Appendix II sampling events at MW-7A, no Appendix II constituents not included in Appendix I were detected above the practical quantitation limit (PQL); therefore, no new constituents will be added to the detected Appendix II constituents during semiannual assessment monitoring events. Since two full Appendix II sampling events were completed at MW-7A after the October 2025 sampling event, future resampling of the full Appendix II list will be conducted every five years in accordance with Permit Special Provision X.4.b. MW-46 was sampled for the full Appendix II list for the first time in October 2025, and no Appendix II constituents not in Appendix I were detected above the PQL. Therefore, in accordance with 567 IAC 113.10(6)b, annual monitoring for the full Appendix II list will be conducted at MW-46A again in Fall 2026. For the remaining assessment, corrective action, and background monitoring wells, the five-year resampling schedule for the full Appendix II list is provided in Table 2.

For wells in detection monitoring, no SSIs were identified at the surface water, shallow groundwater, and deep groundwater monitoring locations.

No new shallow and deep groundwater assessment monitoring locations, assessment constituents in corrective action monitoring locations, and assessment constituents in delineation monitoring locations had SSLs identified that would trigger corrective action in 2025.

For the shallow and deep groundwater corrective action constituents in the corrective action and delineation monitoring locations, SSLs remained for cobalt in MW-29A, MW-31A, MW-35, and MW-43A. No trends were identified for the corrective action constituents. However, first order attenuation can be evaluated for cobalt in MW-31A, MW-35, and MW-43A, with cobalt in MW-31A and MW-43A likely to achieve compliance in the near future.

Conversely, compliance with the GWPS was newly achieved for arsenic in MW-33 during the Fall 2025 statistical evaluation. In accordance with 567 IAC 113.10(9)e(2), arsenic in MW-33A will return to assessment constituents in Fall 2028, as long as concentrations remain below the GWPS during interim statistical evaluations. In addition, since arsenic is the only corrective action constituent at MW-33A, MW-33A will return to assessment monitoring when arsenic returns to an assessment constituent. While arsenic was not included in the *2024 ACM Report* (AECOM, 2025b), current conditions indicate compliance; therefore, further evaluation of corrective measures is not recommended.

As indicated in the Fall 2025 statistical evaluation (Appendix B) and the Report priority, the October 2025 arsenic concentration at background monitoring well MW-37A was above the GWPS. Therefore, it is recommended that the background GWPS for arsenic in the shallow groundwater system be established at 0.22 mg/L.

In addition, the site-specific cobalt GWPS was applied to the deep groundwater system as well as the shallow groundwater system; however, the cobalt prediction limit in the deep groundwater system is below the 567 IAC Chapter 137 Statewide Standard for a Protected Groundwater Source of 0.0021 mg/L. Therefore, it is recommended that 0.0021 mg/L be used as the GWPS for the deep groundwater system.

4.1.2 Methane Monitoring Program

The quarterly methane monitoring results did not indicate concentrations in exceedance of 25% of the lower explosive limit (LEL) for facility structures, 100% LEL at subsurface monitoring locations, or 100% LEL for facility boundaries, with the exception of MW-12A. In September 2025, subsurface monitoring location MW-12A exhibited an exceedance of 100% LEL. To the east of MW-12A, the unnamed tributary to the Trout River intersects the water table and serves as a barrier to off-site methane migration. Since the

September 2025 methane concentration detected at MW-12A was physically constrained from migrating eastward beyond the site boundary, a methane remediation plan was not applicable. Based on 567 IAC 113.9(2), no action is required for this facility with regard to methane control at this time.

As indicated in Table 12 and the Report Priority, on behalf of the Agency, Foth requests IDNR review and approval to amend the Permit and the Methane Monitoring Program Plan by removing MWII-3, MW-5AR, MW-12, MW-23, and MW-28A, GP-01 through GP-09, MW-12A, and MW-3, MW-18, MW-19R and adding MW-26A, MW-32A, MW-33A, MW-37A, MW-38, MW-39A, and MW-46A.

An updated Methane Monitoring Plan will be submitted with the SDP permit renewal application due by September 22, 2026. Additional review of the methane monitoring network will be conducted at that time.

4.1.3 Leachate Control System Performance

For Cells 4, Cell 5, and Cell 5 EXP, effective leachate control is defined in accordance with 567 IAC 113.7(5)b(3) as maintaining less than one foot of leachate head over the liner at the system's lowest point(s) within the waste unit. In 2025, there was no correlation between precipitation and leachate head levels and head levels were below one foot of head over the liner, indicating compliance with 567 IAC 113.7(5)b(3).

Approximately 700,000 gallons of leachate was recirculated in 2025. To date, the recirculation does not appear to result in any consistent leachate build-up in the system. No leachate was hauled to the City of Decorah in 2025. Approximately 850,000 gallons of leachate was evaporated in 2025. Overall leachate generation decreased significantly in 2025, which is attributed to waste placement on the abutment liner.

As indicated in Table 13A and the report priority, on behalf of the Agency, Foth requests IDNR review and approval to amend the Permit and Leachate Monitoring Plan to remove MH-15, GU5-MH, GU-5E-2, and GU-2.

4.2 Recommendations for Future Monitoring

On behalf of the Agency, Foth presents the following recommendations for future monitoring at the Winneshiek County Sanitary Landfill:

- Continue collecting water level and well depth measurements on a semiannual basis at the HMSP-approved monitoring points.
- Continue collecting TSS samples and field turbidity measurements during sampling events in 2026.
- Continue detection, assessment, corrective action, background, and delineation monitoring as listed in Table 2.
- Continue MNA remedy implementation in accordance with the conditions set forth under Special Provision X.4.f, the *Remedial Selection Report* (Foth, 2025c), and the IDNR-approved remedy implementation schedule. The remedy implementation schedule is provided in the table below.

Remedy Implementation Schedule

Estimated Completion Date	Activity
On-going – Semiannually	Continue implementation of the existing remedy in accordance with Special Provision X.4.f and the *Remedial Selection Report* (Foth, 2025c).
	Continue semiannual detection, assessment, and corrective action monitoring in accordance with IAC 113.10(5), (6), and (9)a and as listed in Table 2. Continue semiannual surface water and delineation monitoring as listed in Table 2.
On-going – Annually (due March 31)	By March 31 of each year, submit AWQRs including an update on remedy implementation.
On-going – Biennially	Monitor geochemical parameters to track the localized extent of reducing conditions and the transition to oxidizing conditions.
Ongoing – Annual	Inspect leachate collection system components on the east side of Cells 4 and 5 for obstructions and leaks.

Comments:

fluv = Quaternary Fluvioglacial

N/A = not applicable. Either well is in detection monitoring or no statistically significant increases (SSIs) over background were evaluated for statistically significant levels (SSLs) over the groundwater protection standard (GWPS).

Qf = Quaternary Fill Placed During Landfill Construction

Ql = Quaternary Loess

Qc = Quaternary, Pre-Wisconsin Episode Colluvium

Qt = Quaternary Till

Oeu = Ordovician Maquoketa Formation, Upper Elgin Member (Interbedded Limestone and Shale)

Oel = Ordovician Maquoketa Formation, Lower Elgin Member (Shale)

Og = Ordovician Galena Formation (Limestone)

SSI = statistically significant increase above background

SSL = statistically significant level above the groundwater protection standard

[1] Current Monitoring Program is from the last event the location was sampled (i.e., Fall 2025 event).

[2] SSIs and SSLs are from the Fall 2025 statistical evaluation.

[3] The total number of samples under detection, assessment, corrective action, delineation, and background monitoring are estimated based on the numbers reported in the *2024 Annual Water Quality Report* (AECOM, 2024) plus the sampling events conducted in June and October 2025. Previously, corrective action monitoring events were included within the assessment monitoring category. The number of assessment and corrective action monitoring events will be reevaluated and updated in future reports to more accurately reflect sampling activities.

[4] As addressed in Table 2, SW-1, GU-1, GU-2, MW-24A, MW-101, MW-11, and MW-22 were dry or had insufficient volume for sample collection; therefore, these wells were not included in the Fall 2025 statistical evaluation.

[5] As discussed in Table 9, compliance with the GWPS was newly achieved for cobalt in MW-33 starting with this Fall 2025 statistical evaluation; therefore, an SSL was not listed for the corrective action constituent.

[6] MW-39A, MW-42A, MW-43A, and MW-44A moved to delineation monitoring this Fall 2025 sampling event as requested in the *Remedial Selection Report* (Foth, 2025c) and approved by the Iowa Department of Natural Resources (IDNR) in their letter dated Jan. 6, 2026 (IDNR, 2026).

Comments:

N/A = Not Applicable

[1] Resampling was conducted in Feb. 2025 for constituents with prediction limit exceedances identified at MW-4, MW-7A, and MW-42A in Fall 2024. The results of the Feb. 2025 sampling event were reported in the *2024 Annual Water Quality Report* (AECOM, 2025a). The Feb. 2025 retest did not confirm the prediction limit exceedances for cadmium in MW-4 and barium in MW-7A; however, nickel in MW-42 was confirmed as a statistically significant increase (SSI).

[2] Appendix II locations were sampled for the Appendix I and detected Appendix II constituents in Jun. 2025, unless otherwise noted. During the Jun. 2025 sampling event, deep groundwater location MW-11 was dry or had insufficient volume for sample collection. In the *2024 Annual Water Quality Report* (AECOM, 2025a), MW-24A was requested to be designated as a water-level-only location; therefore, a sample was not collected in Jun. 2025. Although the well is frequently dry, it is recommended that MW-24A remain in the assessment monitoring program and be sampled when there is sufficient volume. As noted in correspondence with the Iowa Department of Natural Resources (IDNR) in the email dated Aug. 12, 2025 (Foth, 2025a), AECOM recommended resampling for barium, cobalt, copper, lead, 2-butanone, and acetone in MW-33A, and for cadmium and zinc in MW-44A prior to the Fall 2025 sampling event. However, since these were in assessment monitoring or corrective action monitoring, these constituents were declared SSIs, and retests were not conducted.

[3] Appendix II locations were sampled for the Appendix I and detected Appendix II constituents in Oct. 2025, and will be sampled for the Appendix I and detected Appendix II constituents in Spring and Fall 2026, unless otherwise noted. During the Oct. 2025 sampling event, surface water location SW-1; shallow groundwater locations GU-1, GU-2, MW-24A, and MW-101; and deep groundwater locations MW-11, MW-22 were dry or had insufficient volume for sample collection. MW-7A and MW-46A moved to assessment monitoring in Summer 2023 and Fall 2024, respectively; however, MW-7A had only undergone one complete Appendix II sampling event, and MW-46A had yet to be sampled for the full Appendix II list. Therefore, MW-7A and MW-46A were sampled for the full Appendix II list in Oct. 2025. The results and future Appendix II sampling schedule for MW-7A and MW-46 are addressed in footnote (6). In accordance with Permit Special Provision X.4.b, resampling for the full Appendix II list at the assessment and corrective action monitoring wells that have completed at least two rounds of full Appendix II analyses will be conducted every five years.

[4] In Oct. 2025, monitoring locations sampled were also analyzed for the geochemical parameters as outlined in the *2024 ACM Report* (AECOM, 2025b). As indicated in the *Remedial Selection Report* (Foth, 2025c), biennial monitoring of geochemical parameters will be conducted at the corrective action, delineation, and background monitoring locations. Analysis of the geochemical parameters was not included in this evaluation. The Iowa Department of Natural Resources (IDNR) approved the *Remedial Selection Report* (Foth, 2025c) in their letter dated Jan. 6, 2026 (IDNR, 2026). The next biennial geochemical monitoring event will occur in Fall 2027.

Table 2
Monitoring Program Implementation Schedule
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Comments Continued:

(5) MW-39A, MW-42A, MW-43A, and MW-44A moved to delineation monitoring this Fall 2025 sampling event as requested in the *Remedial Selection Report* (Foth, 2025c) and approved by the IDNR in their letter dated Jan. 6, 2026 (IDNR, 2026). Therefore, beginning in Spring 2026, MW-39A, MW-43A, and MW-44A, as well as surface monitoring locations, will only be analyzed for cobalt and total suspended solids.

(6) During the initial full Appendix II sampling events at MW-7A, no Appendix II constituents not included in Appendix I were detected above the practical quantitation limit (PQL); therefore, no new constituents will be added to the detected Appendix II constituents during semiannual assessment monitoring events. Since two full Appendix II sampling events were completed at MW-7A after the Oct. 2025 sampling event, future resampling of the full Appendix II list will be conducted every five years in accordance with Permit Special Provision X.4.b. The next full Appendix II event at MW-7A is scheduled for Fall 2030. MW-46 was sampled for the full Appendix II list for the first time in Oct. 2025, and no Appendix II constituents not in Appendix I were detected above the PQL. Therefore, in accordance with 567 IAC 113.10(6)b, annual monitoring for the full Appendix II list will be conducted at MW-46A again in Fall 2026.

(7) Beginning in Oct. 2025, background monitoring locations were sampled for the Appendix I list and Appendix II constituents detected in the downgradient monitoring wells, and will be conducted again in Spring 2026. While not required for compliance reasons, shallow groundwater background wells MW-1 and MW-37 will be sampled for the full Appendix II list in Fall 2026, and deep groundwater background wells MW-18 and MW-19R will be sampled for the full Appendix II list in Spring 2026.

Table 5A
Monitoring Well Maintenance and Performance Summary
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Acceptability of Well Locations:

• In accordance with 567 IAC 113.10(2)f(1), a review of the horizontal and vertical acceptability of the approved monitoring points shall be conducted every two years. The *2024 UPDATE Winneshiek Hydrologic Monitoring System Plan* (AECOM, 2024) details the water table shallow groundwater and deep groundwater monitoring networks. The downgradient monitoring wells are spaced roughly 300 feet apart around the downgradient perimeters. In addition, the groundwater underdrains for Cell 5 and Cell 5 EXP are being monitored. Horizontal delineation wells (MW-39A, MW-42A, MW-43A, and MW-44A) and surface water monitoring locations delineate statistically significant levels (SSLs) over the groundwater protection standard (GWPS) at the downgradient corrective action monitoring wells. The current horizontal placement of downgradient wells and monitoring of the groundwater underdrains is acceptable for detecting and monitoring any potential groundwater impacts from the landfill. As described in the theoretical release evaluation of the HMSP, since the landfill was constructed above the water table, the shallow groundwater is considered the primary pathway for any release from the landfill. Therefore, the purpose of the deep groundwater wells is for vertical delineation and not for the identification of new releases. Based on this review, the deeper bedrock monitoring wells are not evaluated for horizontal acceptability.

• In terms of vertical acceptability, the groundwater monitoring network includes wells completed within different intervals of the first water-bearing zone. The water table (shallow) is screened in different geologic units because the water table occurs in successively different stratigraphic horizons downslope. The deep (bedrock) groundwater wells are screened in the lower Elgin Member of the Maquoketa Formation, and where the Maquoketa is absent, the Galena Group Dubuque Formation. The water table and bedrock groundwater are interconnected and act as one water-bearing zone transifitioning to only water table on the east side of the landfill with groundwater discharging to the tributary of Trout River.

• For the water table wells (shallow groundwater), the 2024 and 2025 groundwater elevations were within the screened interval with the exceptions of MW-2R, MW-3, MW-4, MW-34A, MW-40A, MW-41A, MW-42A, MW-43A, MW-44A, and MW-1. Of these wells, MW-4, MW-34A, and MW-41A, MW-43A, and MW-44A consistently had submerged screens. While these wells continually have submerged screens, these locations continue to provide representative information regarding local groundwater elevation and quality given that most elevations were only slightly above the screened interval, elevations were within the normal range of elevations at these locations (indicating no change in conditions), and/or proximity to the tributary attributed to the higher groundwater elevation.

• The biennial evaluation indicates that the horizontal and vertical placement of the existing monitoring wells continues to be acceptable and no maintenance activities are recommended based on horizontal and vertical acceptability at this time.

Water Level Conditions:

• In accordance with IAC 113.10(2)f(2), a review of water level conditions must be conducted every two years to ensure that the effects of waste disposal or well operation have not resulted in changes in the hydrologic setting and resultant flow paths. The Mar. 2024 shallow and deep groundwater contours are depicted in Figures 2 and 3 of the *2024 AWQR* (AECOM, 2025a), and the Mar. and Oct. 2025 shallow and deep groundwater contours are depicted in Figures 2 through 5 of the 2025 AWQR. The water table (shallow) groundwater contour maps were developed using water level measurements from the shallow groundwater monitoring wells, liquid measurements from the leachate monitoring locations in the unlined Areas 1, 2, and 3, and the base of drainageway elevations for the groundwater cutoff trench/drainage way along the western portion of the site. The bedrock (deep) groundwater contour maps were developed using water level measurements from the deep groundwater monitoring wells. The groundwater flow direction is unchanged relative to previous reviews: shallow groundwater continues to flow northward in the western portion and eastward in the eastern portion, and deep groundwater continues to flow toward the northeast. Significant impacts or changes in groundwater hydrology or groundwater flow paths have not occurred.

• Examination of the contours also indicates that the background wells remain suitable for continued use: MW-1, MW-37, MW-18, and MW-19R are located upgradient of the landfill cells.

• The 2024 and 2025 groundwater elevations have remained fairly consistent, typically exhibiting a seasonal fluctuation of less than 4 feet. Greater seasonal fluctuation was exhibited at MW-33A, MW-40A, MW-1, and MW-37A.

• The biennial evaluation did not identify significant impacts or changes in groundwater hydrology or groundwater flow paths. No maintenance activities are recommended based on review of the 2024 and 2025 water level information.

Table 5A
Monitoring Well Maintenance and Performance Summary
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Well Depths:

• In accordance with IAC 113.10(2)f(3), well depth measurements were collected in 2024 and 2025 to ensure the wells are physically intact and not filling with sediment. The 2024 and 2025 well depths are within one foot of the original well depths, except for MW-35. The well depth measurements at this location was nearly 2 feet deeper than the original well depth, which does not indicate that the well is filling with sediment. The discrepancy between the measured well depth and the original depth at MW-35 is attributed to an error in the original boring log record for the well.

• The 2024 and 2025 measured well depths indicated that the wells are not filling with sediment and remain physically intact. No maintenance activities are recommended based on review of the 2024 and 2025 well depth information.

Well Deterioration:

• In accordance with IAC 113.10(2)f(4), a review of well recharge rates and chemistry must be conducted every two years to determine if well deterioration is occurring. Review of the water level measurements prior to and subsequent to sampling indicated that recharge rates are consistent with historically observed data. The 2024 and 2025 field parameter results measured during purging are consistent with previously observed measurements.

• The well recharges rates and field chemistry data indicate the integrity of the monitoring wells remains intact and that no deterioration is occurring. Based on review of the well recharge rates and field chemistry, no maintenance activities are recommended.

Exterior Well Maintenance:

• Details regarding the well inspection conducted in Mar. 2025 is provided in Appendix A. The following exterior well maintenance is recommended in 2026: repair the outer casing at monitoring wells MW-2 and MW-3.

Proposed Changes to the Monitoring Network

• Based on the biennial review of water levels, well depths, horizontal and vertical acceptability of well locations, well recharge rates, and field chemistry, no well maintenance activities or additional monitoring wells are recommended. As noted above, exterior well maintenance is recommended at MW-2 and MW-3.

Comments:

amsl = above mean sea level

• The contents of this table are intended to satisfy the requirements set forth in 567 IAC 113.6(2)i and Permit Special Provision X.4.d.

• Areas 1, 2, and 3 are unlined and were constructed in accordance with the rules in effect at the time, which did not include a requirement for groundwater separation. Cell 4 is clay-lined and constructed without an underdrain based on documented groundwater separation exceeding 5 feet below waste. As a result, these areas are not evaluated in this table.

• Groundwater elevations are measured at the GU-1 and GU-5E-1 underdrain sumps by measuring depth to water.

• The minimum five-foot separation distance was maintained at lined Cell 5 and Cell 5 EXP in 2025.

Total Suspended Solids	TSS	mg/L	18	16	0.94 (1/2 RL)	834	80.27		**N/A**	N/A	**N/A**	N/A

Comments:
DQR = double quantification rule
GWPS = groundwater protection standard
MCL = Maximum Contaminant Level
mg/L = milligrams per liter
N/A = not applicable
RL = reporting limit taken as the laboratory practical quantitation limit (PQL)

Table 6
Background and GWPS Summary
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Comments Continued:

SS = Statewide Standard

ug/L = micrograms per liter

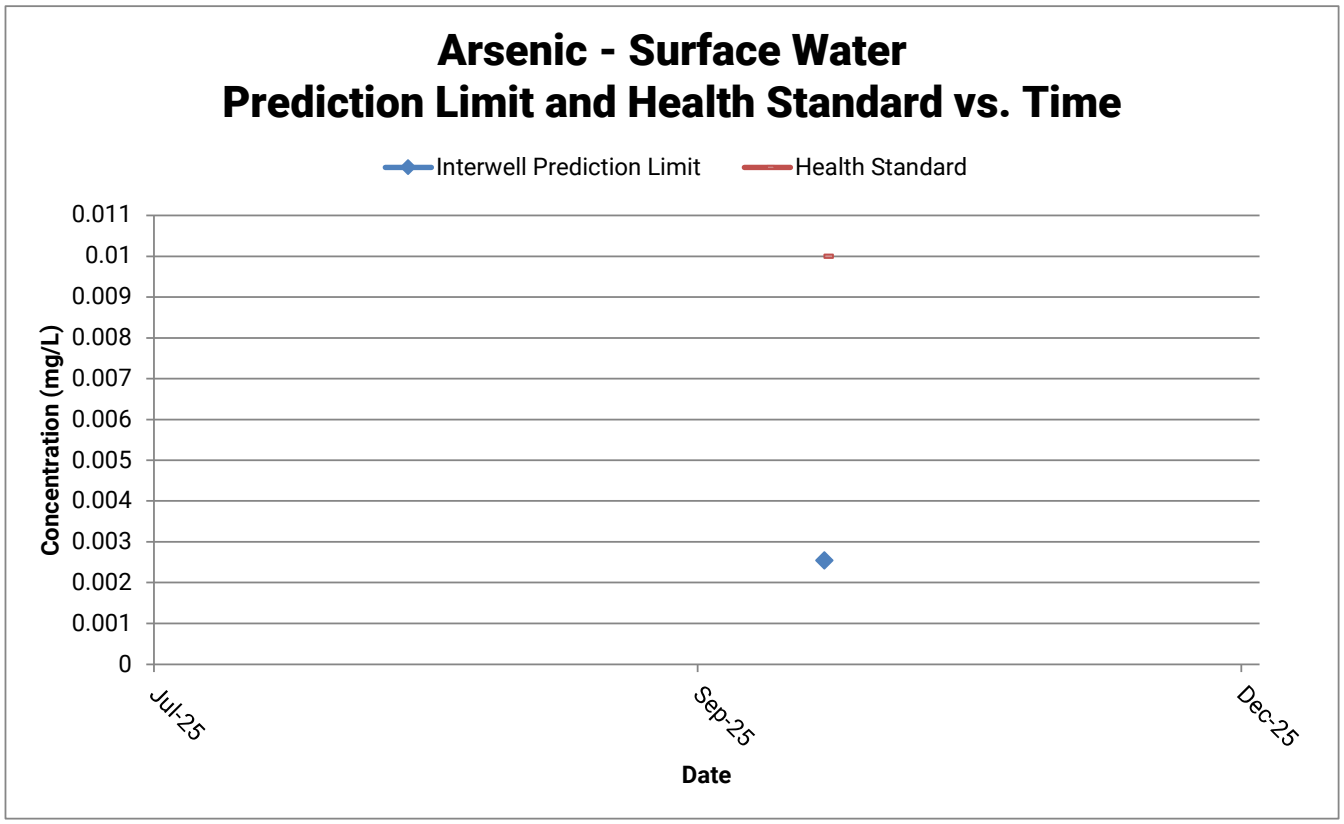
(1) List contains constituents detected above the laboratory method detection limit (MDL) in the background data sets after data set adjustments detailed in the Appendix B statistical reports were conducted (i.e., removal of background data based on turbidity and elevated PQLs). Background data set adjustments are listed as crossed-out concentrations in Table 13 and were removed from the background data set prior to conducting statistical analyses.

(2) The number of detections includes J-flagged data (concentrations above the MDL but below the RL).

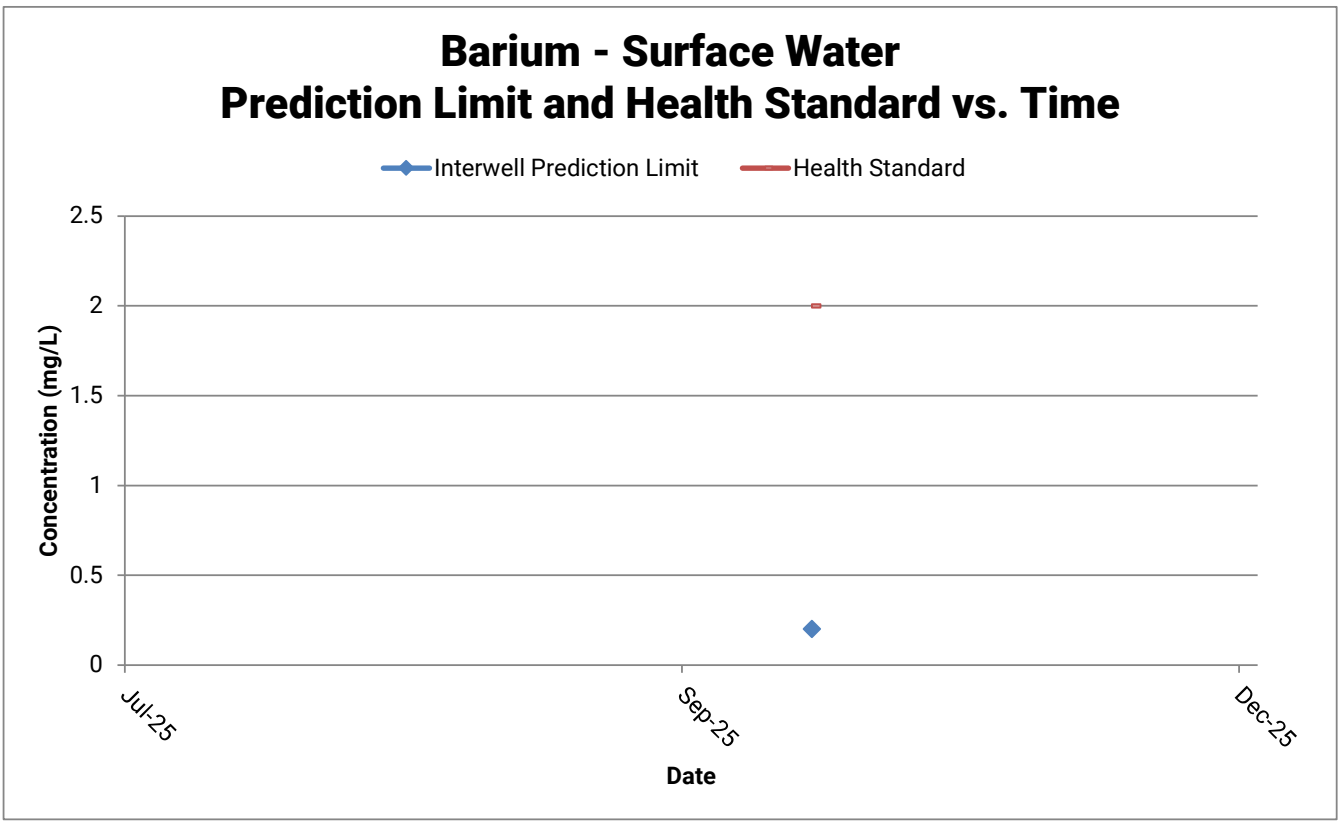
(3) Non-detect concentrations are included in the calculation of minimum, maximum, and mean; 1/2 the RL was utilized for non-detect concentrations.

(4) Sources are either the Maximum Contaminant Level (MCL) promulgated under Section 1412 of the Safe Drinking Water Act in 40 CFR Part 141 or the 567 Iowa Administrative Code (IAC) Chapter 137 Statewide Standards for a Protected Groundwater Source (SS). If background is higher than the MCL or SS, the GWPS is background. Background as the GWPS is the one-sample test confidence limit method where the fixed GWPS is the background upper tolerance limit with 95% confidence and 95% coverage. As requested in the report priority, the Oct. 2025 arsenic concentration at background monitoring well MW-37 was above the GWPS. Therefore, it is recommended that the background GWPS for arsenic in the shallow groundwater system be established at 0.22 mg/L. In the case of cobalt, a site-specific GWPS of 0.0034 mg/L has been established and is detailed in the *2024 UPDATE Winneshiek Hydrologic Monitoring System Plan* (HMSP) (AECOM, 2024), which was approved by the IDNR in their letter dated Oct. 29, 2024 (IDNR, 2024). Previously, the site-specific GWPS was applied to the deep groundwater system in addition to the shallow groundwater system; however, the cobalt prediction limit in the deep groundwater system is below the SS of 0.0021 mg/L. Therefore, it is recommended that the health-based GWPS (i.e., 0.0021 mg/L) be used as the GWPS for the deep groundwater system. N/A = not applicable; constituent does not have a MCL or SS and using background as the GWPS is not applicable due to limited detections in background and the downgradient data set.

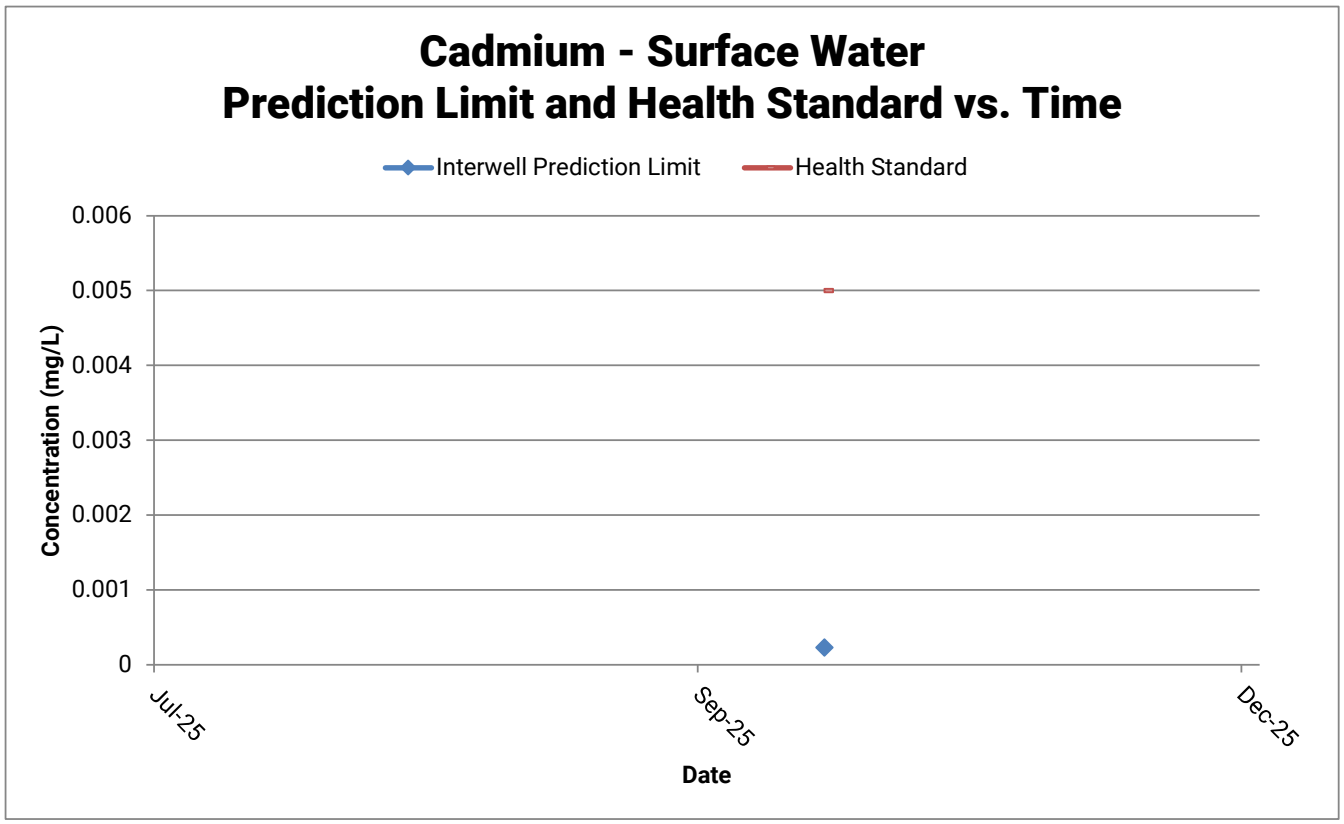
(5) As noted in Table 2, background surface water monitoring location SW-1 was dry during the Oct. 2025 sampling event; therefore, only data through the Jun. 2025 event are included.



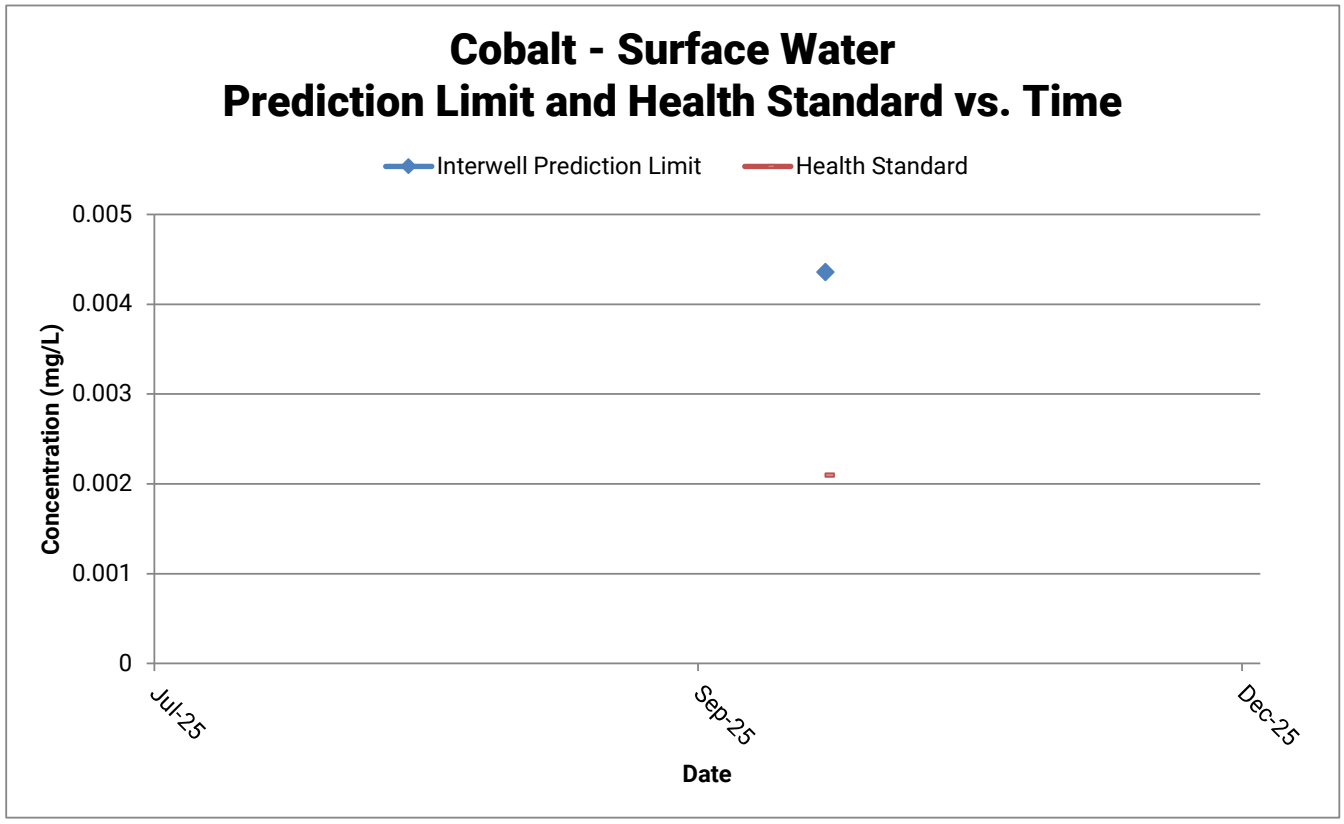
• The background data sets consist of SW-1 for surface water, MW-1 and MW-37A for shallow groundwater, and MW-18 and MW-19R for deep groundwater. Background data set adjustments were made in 2025 as addressed in the Fall 2025 statistical evaluation and requested in the Report Priority. Of note, historical MW-1R and MW-19 data were recommended for removal from the shallow and deep groundwater background data sets, respectively; and data from these wells are not included in the background analysis included in this table. The background data set adjustments detailed in the statistical reports provided in Appendix B are listed as crossed-out concentrations in Table 14 .



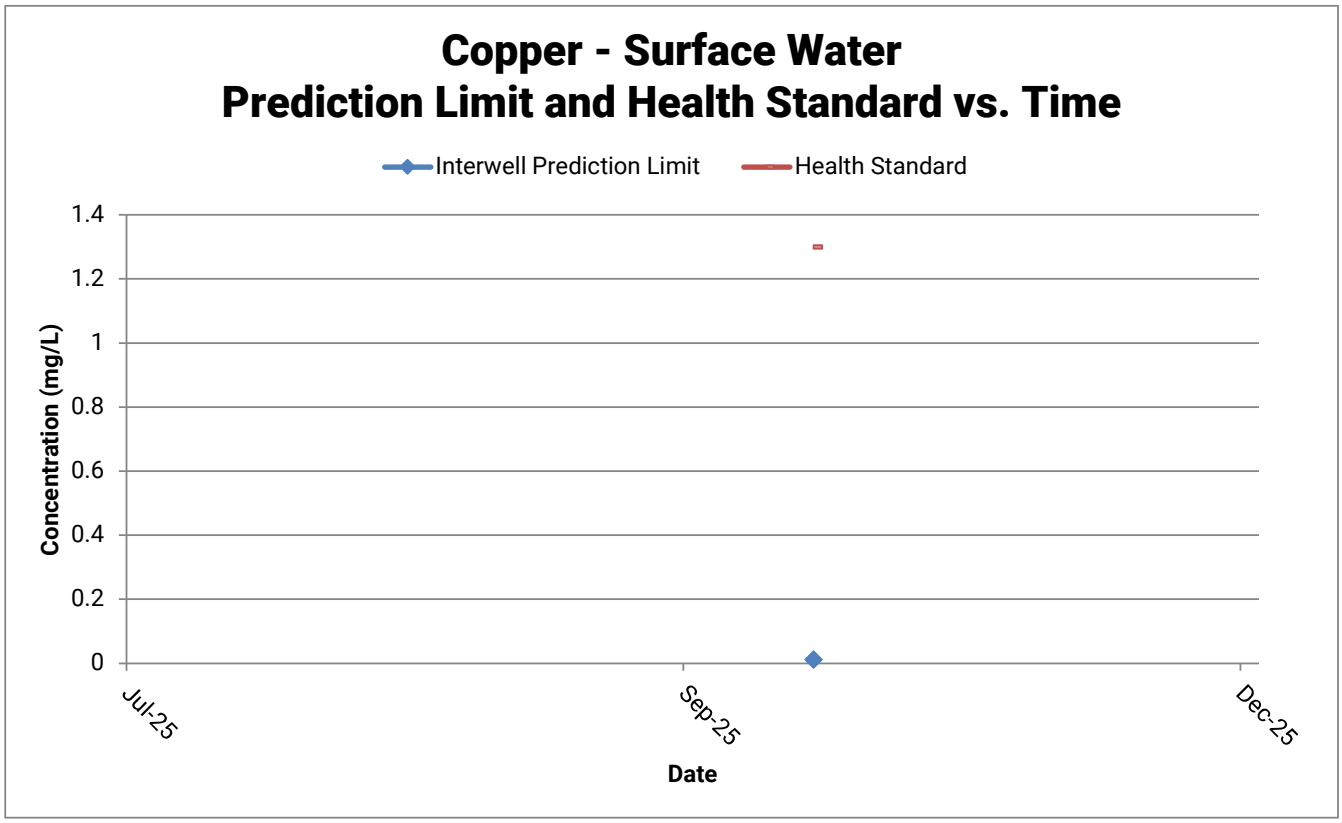
Summary of Prediction Limits and Health Standards
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P



Comments:



• The following graphs depict the surface water, shallow groundwater, and deep groundwater interwell prediction limits for the Fall 2025 statistical evaluation. As discussed in the Fall 2025 statistical evaluation (Appendix B), numerous background data set adjustments and changes to the statistical methodologies affected the calculated prediction limits; therefore, comparisons to previous limits provides little value. Interwell prediction limits are calculated using pooled data from the background monitoring wells: SW-1 for the surface water, MW-1 and MW-37A for the shallow groundwater, and MW-18 and MW-19 for the deep groundwater.



• The sources of the background and health standards are presented in Table 6.

* Current result is above background, if confirmed by retest sample(s) an SSI will be identified (1-of-2 retesting plan for groundwater prediction limits and DQR constituents).

** Current result is a confirmed SSI. Appendix II sampling will be completed within 90 days.

Comments:

DQR = double quantification rule

mg/L = milligrams per liter

N/A = Not Applicable

SSI = statistically significant increase above background

[1] List contains constituents detected above the laboratory method detection limit (MDL) and includes J-flagged concentrations.

[2] Source of background standards are presented in Table 6. If a constituent isn't listed in Table 5, indicating the constituent hasn't been detected in background, then the background standard is the laboratory reporting limit.

• No SSIs were identified at surface water, shallow groundwater, and deep groundwater detection monitoring wells. The future sampling schedule is provided in Table 2.

Corrective Action Monitoring Locations - Assessment Constituents									
MW-35	Barium	mg/L	0.256	0.1906	0.26	2	Nov. 2019	Feb. 2020	Nov. 2020
	Nickel	mg/L	0.0186	0.005	0.018	0.1	Nov. 2019	Feb. 2020	Nov. 2020

* For assessment monitoring locations, all current results are below background. If confirmed by a second event, location may return to detection monitoring in accordance with IAC 113.10(6)e. However, three consecutive events will be utilized to make the determination to return to detection monitoring to limit frequent fluctuation of wells moving between the detection and assessment monitoring program.

** LCL has exceeded the GWPS, this well/constituent pair is now identified as an SSL.

*** Non-MSWLF Unit source of the SSI identified.

Comments:

GWPS = Groundwater Protection Standard

LCL = lower confidence limit

mg/L = milligrams per liter

MSWLF = municipal solid waste landfill

N/S = Not resampled; SSI was declared in lieu of conducting resample(s).

SSI = statistically significant increase above background

Table 8
Summary of Ongoing and Newly Identified SSIs
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

SSL = statistically significant level above GWPS

(1) List contains constituents which have been identified as SSIs during the Fall 2025 statistical evaluation. Unless otherwise noted, all current results listed in this table are above background. SSIs were declared in lieu of conducting resample(s).
(2) Most recent results are from Oct. 2025.

Comments Continued:

(3) Source of background standards and GWPS values are presented in Table 6. If the constituent isn't listed in Table 5 (indicating the constituent hasn't been detected in background), then the background standard is the laboratory reporting limit (RL), and the GWPS is the maximum contaminant level (MCL) or the statewide standard (SS) if there is no MCL. If background is higher than the MCL or SS, the GWPS is background.
(4) The 5th background sample for the Appendix I and II metals is the fifth sampling event conducted using low-flow sampling methods. Low-flow sampling was initiated in Oct/.Nov. 2014.
• Resampling was conducted in Feb. 2025 for cadmium in MW-4, barium in MW-7A, and nikel in MW-42A. The results of the Feb. 2025 sampling event were reported in the *2024 Annual Water Quality Report* (AECOM, 2025a). The Feb. 2025 retest did not confirm the prediction limit exceedances for cadmium in MW-4 and barium in MW-7A; however, nickel in MW-42 was confirmed as a statistically significant increase (SSI). Statistical results are provided in the Winter 2025 statistical evaluation (AECOM, 2025a).
• As noted in correspondence with the Iowa Department of Natural Resources (IDNR) in the email dated Aug. 12, 2025 (Foth, 2025a), AECOM recommended resampling for barium, cobalt, copper, lead, 2-butanone, and acetone in MW-33A, and for cadmium and zinc in MW-44A prior to the Fall 2025 sampling event. However, since these were in assessment monitoring or corrective action monitoring, these constituents were declared SSIs, and retests were not conducted.
• No SSLs were identified for the assessment monitoring locations. Details regarding the future sampling schedules are provided in Table 2.
• No SSLs were identified for the assessment constituents in the corrective action monitoring locations. These locations will continue corrective action monitoring in 2026 as listed in Table 2. A summary of the statistical comparisons for the corrective action constituents is provided in Table 9.
• No SSIs were identified for cobalt in the delineation monitoring locations. These locations will continue delineation monitoring in 2026 as listed in Table 2.

Table 9
Summary of Ongoing and Newly Identified SSLs
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Well [1]	Constituent [1]	Units	Most Recent Result [1]	Upper Confidence Limit [2]	GWPS [3]	Initial Exceedance	Consecutive Compliance Dates		
							1st Occurrence	Most Recent	Duration
Shallow Groundwater Monitoring Locations

MW-35	Cobalt	mg/L	0.00473	0.0066	0.0021	Nov. 2019	N/A	N/A	N/A

* This well/contaminant pair has been compliant for 3 consecutive years and no longer has an SSL.

** Non-MSWLF Unit source of the SSL identified.

Comments:

GWPS = Groundwater Protection Standard

mg/L = milligrams per liter

MSWLF = municipal solid waste landfill

N/A = Not applicable; indicates the analyte/well pair has not achieved compliance with the GWPS (i.e., upper confident limit or the upper 95% confidence limit on the trend line is lower than the GWPS for a period of three consecutive years).

SSL = statistically significant level above GWPS

[1] The most recent results are from the Oct. 2025 event.

[2] If a decreasing trend was identified, the value is the upper 95% confidence limit on the trend line.

[3] Source of the Groundwater Protection Standard (GWPS) values are presented in Table 6. If the constituent isn't listed in Table 5, the GWPS is the Maximum Contaminant Level (MCL) or the Statewide Standard (SS) if there is no MCL. If background is higher than the MCL or SS, the GWPS is background.

• For the corrective action constituents in the shallow groundwater corrective action and delineation monitoring locations, statistically significant levels SSLs over the GWPS remained for cobalt in MW-29A, MW-31A, and MW-43A.

• Compliance with the GWPS was newly achieved for arsenic in MW-33 during the Fall 2025 statistical evaluation. In accordance with 567 IAC 113.10(9)e(2), arsenic in MW-33A will return to assessment constituents in Fall 2028, as long as concentrations remain below the GWPS during interim statistical evaluations. In addition, since arsenic is the only corrective action constituent at MW-33A, MW-33A will return to assessment monitoring when arsenic returns to an assessment constituent. While arsenic was not included in the *2024 ACM Report* (AECOM, 2025b), current conditions indicate compliance; therefore, further evaluation of corrective measures is not recommended.

• An SSL remained for cobalt in deep groundwater corrective action monitoring location MW-35.

• No changes are recommended for the shallow and deep groundwater corrective action and delineation monitoring locations based on the corrective action statistical results conducted during the Fall 2025 statistical evaluation.

Table 10

Comments:

• Table 10 currently presents only the Fall 2025 statistically significant increases (SSIs) and statistically significant levels (SSLs) for assessment, corrective action, and delineation monitoring locations sampled in Oct. 2025. Due to changes in statistical methodology noted in the Fall 2025 statistical evaluation (Appendix B) and Report Priority, inclusion of past evaluation results was deemed of limited value.

• As noted in Table 9, compliance with the groundwater protection standard (GWPS) was newly achieved for arsenic in MW-33 during the Fall 2025 statistical evaluation.

Table 11
Corrective Action Trend Analysis
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Well	Corrective Action Constituent	Trend	N	Analyte/Well Pair Achieved Compliance with GWPS?	Projected Year to Completion* [1,2]

Corrective Action Monitoring Locations					
MW-35	Cobalt	No Trend	14	No	2048

* To satisfy IAC 113.10(9)e(2)
Permit holder addresses adequacy of corrective measure when trend is not favorable
Permit shall adjust corrective action for financial assurance as completion date warrants

Comments:
N = Number of Samples
* For remedy completion [IAC 113.10(9)e(2)], compliance with the Groundwater Protection Standard (GWPS) is considered achieved by demonstrating that concentrations of Appendix II constituents have not exceeded the GWPS for a period of three consecutive years or an alternate length of time established by the Iowa Department of Natural Resources (IDNR).
[1] For corrective action constituents that have achieved compliance with the GWPS, the projected year to completion listed is 3 years after compliance was first achieved (i.e., 3 years after the First Occurrence listed in Table 9) and will remain as long as concentrations remain statistically below the GWPS during the interim statistical evaluations. Individual analyte/well pairs will return to assessment constituents once compliance with the GWPS has been achieved for a period of 3 years. In accordance with IAC 113.10(9)3(2), a well may not return to assessment monitoring until all detected constituents are below the GWPS.
[2] For the remaining corrective constituents (i.e., those that have not achieved compliance with the GWPS), the projected year to completion is based on the estimated first order attenuation rates for individual analyte/well pairs evaluated as part of the Fall 2025 statistical evaluation (Appendix B). The projected years to completion are 3 years after the first order attenuation rates projected initial compliance with the GWPS.
[4] For cobalt in MW-31, first order attenuation rates projected that compliance with the GWPS has already been achieved (i.e., Jun. 2024). However, the confidence bands placed around the linear trend line have not yet indicated compliance with the GWPS. Recent results have individually been below the GWPS, and a decreasing trend is beginning to appear. Although a trend is not statistically significant, the data suggest that attenuation may soon be evaluated using regression statistics.
• Compliance with the GWPS was newly achieved for arsenic in MW-33 during the Fall 2025 statistical evaluation. In accordance with 567 IAC 113.10(9)e(2), arsenic in MW-33A will return to assessment constituents in Fall 2028, as long as concentrations remain below the GWPS during interim statistical evaluations. In addition, since arsenic is the only corrective action constituent at MW-33A, MW-33A will return to assessment monitoring when arsenic returns to an assessment constituent. While arsenic was not included in the *2024 ACM Report* (AECOM, 2025b), current conditions indicate compliance; therefore, further evaluation of corrective measures is not recommended.
• No trends were identified for the corrective action constituents. However, compliance with the GWPS was achieved for arsenic in MW-33A, and first order attenuation can be evaluated for cobalt in MW-31A, MW-43A, and MW-35, with cobalt in MW-31A and MW-43A likely to achieve compliance in the near future.

Comments:

% = percent

N/A = not applicable

• The contents of this report are intended to satisfy the requirements set forth in 567 IAC 113.9(2) and Permit Special Provision X.6.

• Multiple attempts were made to obtain the field documentation from the previous consultant for the first and second quarter monitoring events; however, these efforts were unsuccessful. Going forward, methane monitoring will be conducted on a quarterly basis in accordance with 567 IAC 113.9(2).

Table 12
Methane Monitoring Summary
2025 Methane Monitoring Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Comments Continued:

• As shown in Table 12, the quarterly methane monitoring results did not indicate concentrations in exceedance of 25% of the lower explosive limit (LEL) for facility structures, 100% LEL at subsurface monitoring locations, or 100% LEL for facility boundaries, with the exception of MW-12A. In Sep. 2025, subsurface monitoring location MW-12A exhibited an exceedance of 100% LEL. To the east of MW-12A, the unnamed tributary to the Trout River intersects the water table and serves as a barrier to off-site methane migration. Since the Sep. 2025 methane concentration detected at MW-12A was physically constrained from migrating eastward beyond the site boundary, a methane remediation plan was not applicable. Methane monitoring was conducted the following month, and methane concentration at MW-12A was below 100% the LEL, and methane was not detected at step-out location MW-39A. As discussed below, MW-39A is recommended as a replacement for MW-12A. With the exception of MW-38A, the proposed subsurface monitoring locations were monitored in third or fourth quarter, and the results are presented in Table 12. Based on 567 IAC 113.9(2), no action is required for this facility with regard to methane control at this time.

Requests:

• On behalf of the Winneshiek County Area Solid Waste Agency (Agency), Foth requests Iowa Department of Natural Resource (IDNR) review and approval to amend the Permit and the Methane Monitoring Program Plan to include the following:

- Removal of MWII-3, MW-5AR, MW-12, MW-23, and MW-28A, as these wells have been abandoned.
- Removal of GP-01 through GP-09, as these probes are silted in and do not provide adequate data.
- Replacement of MW-12A with step-out location MW-39A.
- Removal of MW-3, MW-18, and MW-19R, as the well screens are continuously submerged.
- Addition of MW-26A, MW-32A, MW-33A, MW-37A, MW-38A, and MW-46A.

• Upon approval of these changes, the methane monitoring network would consist of the Scale House, Maintenance Building, GU-1, GU-2, MW-1, MW-2, MW-4B, MW-11, MW-22, MW-24A, MW-26A, MW-32A, MW-33A, MW-37A, MW-38A, MW-39A, and MW-46A. These locations will provide adequate spatial coverage and representative methane monitoring data.

• An updated Methane Monitoring Plan will be submitted with the Sanitary Disposal Project (SDP) permit renewal application due by September 22, 2026. Additional review of the methane monitoring network will be conducted at that time.

Table 13A
Leachate Management Summary
2025 Leachate Collection System Performance Evaluation Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

• The contents of this report are intended to satisfy the requirements set forth in 567 Iowa Administrative Code (IAC) 113.7(5)b and Special Provision X.2.d.

• Leachate was not sent to the City of Decorah publicly owned treatment works (POTW) during the reporting period; therefore, the laboratory analytical results were not submitted to the City of Decorah.

Leachate Collection System Description:

• Toe Drain Leachate Collection Pipe Around Original Areas 1, 2, and 3 - Installed in approximately 1992. This toe drain system includes a gravity collection system that flows to Leachate Lagoon Bay No. 1.

• Leachate Collection System - Constructed as Part of Original Cell 4. This is a gravity collection system that flows to a leachate sump at the northeast corner of original Cell 4. The leachate flows by gravity to Leachate Lagoon Bay No. 2.

• Leachate Collection System - Constructed as Part of Original Cell 5. This is similar to the original Cell 4 system and flows to the northeast corner of original Cell 5. Leachate is pumped from the sump to Leachate Lagoon Bay No. 2.

• Leachate Collection System – Constructed as Part of the 2016 Project. There is a gravity collection system in the original Cell 5 Expansion Area that travels to Lagoon Bay No. 2. Also, there is a gravity toe drain that runs along the bottom of the abutment liner. The section across the north edge of original Cell 4 travels by gravity to the east to Lagoon Bay No. 2. The section across the west edge of original Cell 5 travels north and is deposited in the original Cell 5 Expansion Area Leachate Collection System.

Maintenance:

• Leachate lines are cleaned every 3 years in accordance with 567 IAC 113.7(5)"b." Leachate line cleaning and inspection is conducted according to the following schedule:

- Areas 1, 2, and 3 were last cleaned in 2023 and are scheduled to be cleaned in 2026.
- Original Cell 4 was cleaned in 2025 and is scheduled to be cleaned again in 2028.
- Cell 5 and Cell 5 EXP was last cleaned in 2024 and is scheduled to be cleaned in 2027.

Performance

• Effective leachate control is defined in accordance with 567 IAC 113.7(5)b(3) as maintaining less than one foot of leachate head over the liner at the system's lowest point(s) within the waste unit.

• Leachate head levels are monitored by dedicated transducers. LHPZ-1 and LHPZ-2 monitor head levels for unlined Area 2, LHPZ-3 and LHPZ-4 monitor head levels for unlined Area 1, and LHPZ-6 monitors head levels for unlined Area 3. LHPZ-4-1 monitor head levels for Cell 4; LHPZ-5-1 and LHPZ-5-2 monitor head levels for Cell 5; and LHPZ-5E-1 and LHPZ-5E-2 monitor head levels for Cell 5 EXP. In 2025, less than one foot of head on the liner was achieved for lined cells.

• Groundwater elevations are measured at the GU-1, GU-2, GU-5E-1, and GULG-1 underdrain sumps by measuring depth to water. GU-2 is monitored for the Cell 5 EXP, but has remained dry; therefore, it has not been evaluated further and included in Table 13. Groundwater seperation distance is addressed in Table 5B.

• Monthly leachate elevations measured between Jan. and Dec. 2025 and annual leachate elevations computed using measurements collected between 2014 and Dec. 2025 for each location are presented in this table (Table 13). Leachate contours are depicted with the shallow groundwater contours in Figures 2 and 4.

• Leachate contours generally reflect the ground surface contours, with the highest leachate elevations in the southwest portion of the landfill, and the lowest leachate elevations located along the perimeters of the landfill. This leachate pattern is consistent with previous years and represents no significant change.

• In 2025, there was no correlation between precipitation and leachate elevations or volumes.

Leachate Recirculation and Evaporation:

• No leachate was hauled to the City of Decorah in 2025.

• When conditions allow, leachate is pumped through a sprinkler system and recirculated over the composite-lined areas of the Landfill, Cell 5 EXP. This has proven to be successful in the past and reduces leachate hauling and disposal costs for the landfill. Leachate is dispersed from the sprinklers and is partially evaporated and/or used by the vegetation on the site (evapotranspiration) with a reduction in volume. Leachate piezometers LHPZ-4-1, LHPZ-5-1, LHPZ-5-2, LHPZ-5E-1, and LHPZ-5E-2 were installed to monitor leachate levels above the top of the liner; and to date, the recirculation does not appear to result in any consistent leachate build-up in the system. Approximately 700,000 gallons of leachate was recirculated in 2025. No leachate was hauled to the City of Decorah in

Leachate Recirculation and Evaporation Continued:

• In August 2017, the SMI 420F Evaporator in Lagoon Bay No. 2 was installed. The anchoring points are adjusted by the landfill staff depending on the wind conditions, and the evaporator is not operated when the wind is greater than 15 miles per hour to control the mist from drifting outside the lagoon boundary. The evaporator is designed to evaporate 2,000 gallons per hour at 500 degrees Fahrenheit. The use of the evaporator has had a significant effect on the leachate levels in the lagoon. In 2025, the evaporators were operated from May through September, for a total of 56 days and 425 total hours. Assuming the equipment evaporation rate is 2,000 gallons per hour, approximately 850,000 gallons of leachate was evaporated in 2025.

• Leachate generation has significantly decreased in 2025 due to waste placement on the abutment liner.

Requests:

• On behalf of the Winneshiek County Area Solid Waste Agency, Foth requests the Iowa Department of Natural Resources (IDNR) review and approval to amend the Permit and the Leachate Monitoring Plan to remove MH-15, GU5-MH, GU5E-2, and GU-2 as leachate monitoring locations. MH-15 is a leachate line manhole outside the waste limits and does not provide information regarding the head on the liner. GU5-MH is an underdrain location for Cell 5, which is adequately monitored by GU-1. GU5E-2 and GU-2 are underdrain locations for Cell 5 EXP that are adequately monitored by GU-5E-1.

Table 14
Analytical Data Summary
2025 Annual Water Quality Report
Winneshiek County Area Solid Waste Agency
Permit No. 57-SDP-01-74P

Comments:

The following table presents the surface water, shallow groundwater, and deep groundwater Appendix II analytical data collected since Oct./Nov. 2014.

Detections above the laboratory MDL are shown in **bold**.

DwnGrad = downgradient (compliance) monitoring location.

Bkgrnd = background monitoring location.

Delin = delineation monitoring location.

• The Jun. 2025 p-Phenylenediamine result at MW-11 was rejected due to laboratory control sample/laboratory control sample duplicate recoveries that were below the acceptance limit. As a result, the Jun. 2025 p-Phenylenediamine result at MW-11 is listed as a crossed-out concentration in Table 14.

• As further addressed in the Fall 2025 statistical evaluation (Appendix B) and Report Priority, the following background data set adjustments are recommended for removal based on a review of replaced background well data, total suspended solids (TSS), single background detections, and/or reporting limits. As discussed below, MW-1R and MW-19 were recommended for removal from background and are no longer included in Table 14. The remaining background data set adjustments are listed as crossed-out concentrations.

- Removal of MW-1R from the shallow groundwater background data set. MW-1R was installed in April 2010 after MW-1 moved to assessment monitoring. However, MW-1R was installed in a crop field on the adjoining property to the west and was mostly inaccessible from November 2017 through Sep. 2021, when MW-1R was abandoned. MW-37A was installed in Sep. 2021 to replace MW-1R. Since MW-1R's contribution to shallow groundwater background is minimal due to inaccessibility, and further data set removals would likely be required due to volatile organic compound (VOC) detections, removal of the historical MW-1R data from the combined shallow groundwater background data set is
- Removal of MW-19 from the deep groundwater background data set. From Jun. to Oct. 2019, groundwater levels at MW-19 increased approximately 15 feet, which was attributed to annular seal failure. MW-19 was abandoned in Aug. 2021, and MW-19R was installed in Sep. 2021 as its replacement. The data sets for MW-19 and MW-19R were initially combined; however, due to the seal failure, removal of the Jun. 2019 through May 2021 metals data at MW-19 was recommended and approved by the IDNR in their letter dated May 2, 2023 (IDNR, 2023). With four years of monitoring data now available from MW-19R, retaining the limited historical MW-19 data no longer provides meaningful ongoing value. Therefore, removal of the historical MW-19 data from the combined deep groundwater background data set is recommended.
- Removal of the Sep. 2021 barium, cobalt, lead, and nickel concentrations in MW-19R due to elevated TSS (182 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.
- Removal of the Sep. 2021 arsenic, barium, cadmium, chromium, cobalt, copper, lead, silver, and vanadium concentrations in MW-37A due to the elevated TSS (159 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.
- Removal of the Mar. 2022 arsenic, barium, cadmium, chromium, cobalt, copper, lead, nickel, and vanadium concentrations in MW-19R due to the elevated TSS (834 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.
- Removal of the Jun. 2023 barium, cobalt, and copper concentrations in MW-19R due to elevated TSS (109 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.
- Removal of the Nov. 2023 arsenic, barium, cadmium, cobalt, copper, lead, nickel, and vanadium concentrations in MW-1 due to elevated TSS (276 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.
- Removal of the Oct. 2025 arsenic, barium, cobalt, and lead concentrations in MW-19R due to the elevated TSS (151 mg/L) and the potential for turbidity to contribute to the higher metal concentrations identified.
- Removal of the Nov. 2014 barium, cobalt, copper, nickel, and vanadium concentrations in MW-1 due to the potential impact indicated by the chlorobenzene detection.
- Removal of the Dec. 2024 arsenic, barium, cobalt, and nickel concentrations in MW-37A due to the potential impact indicated by the benzene detection.
- Removal of the Nov. 2014 through Jun. 2019 cadmium results in SW-1 since the practical quantitation limit (PQL) was at least two times the maximum detected background concentration.

NOTES:

1. Date of Aerial Imagery Acquisition: December, 2025
2. Coordinate system is: NAD83(2011) Iowa North Zone, US feet. Vertical Datum is NAVD88.
3. Groundwater monitoring locations listed as dry were dry or had insufficient water for sample collection.
4. Leachate levels in the unlined cells are included prior to contouring the groundwater contours in Surfer.
5. For the groundwater cutoff trench along the western portion of the site that discharges into the sedimentation basin, as-built elevations from the base of the drainage way were included prior to contouring in Surfer.

This drawing is neither a legally recorded map nor a survey and is not intended to be used as one. This drawing is a compilation of records, information and data used for reference purposes only.

June 2025 Sampling Event

AECOM — ***Well Purging and Sampling Collection***

Site: Winneshiek Well ID: MW-2R Date: 6-2-25
Depth to Top of Screen: 18 feet (TOC) Depth to Bottom of screen: 28 feet (TOC)
Weather Conditions: Sunny 80° Project No.:

Sample Method (circle one): Pumped / Other: _____
Pump Type: (circle one) 0.675" dia. SS Bladder (15ml) / 0.850" dia. SS Bladder (29ml) / PVC Mega-Monsoon / 1.66" dia. SS Bladder (150ml) / Other: _____

Day 1 (for wells with <0.33 drawdown)

Pre-Purge DTW: 12.87 feet(TOC) Time: 1630
Pump Intake (ft. below DTW): _____ feet (TOC)
Post-Purge DTW: 13.05 feet (TOC) Time: 1710
From AquaTroll 500:
Total Purge Volume (actual): 1300 ml
(At least 1x the total tubing and flow thru cell volume calculated below needs to be removed prior to recording)

Day 2 (for wells pumped/bailed dry) Date:

Pre-Purge DTW: _____ feet (TOC) Time: _____
Pump Intake (ft. below DTW): _____ feet (TOC)
Post-Purge DTW: _____ feet (TOC) Time: _____
From AquaTroll 500:
Total Purge Volume: _____ ml
(At least 1x the total tubing and flow thru cell volume calculated below needs to be removed)

Total Purge Volume Calculation:
h_s = Stabilized/Max Drawdown Height = .33 feet
S = Drawdown Volume (2" diameter well) = 618ml/ft x h_s = 203.94 ml

h_t = Length of Tubing in Well = 23 feet
P = Bladder Pump (3/16" diameter) Tubing + Flow Cell Volume (ml) + Bladder Pump Volume (ml) = 5.43 ml/ft x h_t + 130 ml + 15 ml = 269.89 ml
Or
P = SS Submersible Pump (3/8" diameter) Tubing + Flow Cell Volume (ml) = 21.72 ml/ft x h_t + 130 ml = _____ ml

T = Total Tubing and Flow Cell Purge Volume = **P** = 254.89 ml
Time to purge tubing plus flow cell volume = T/ pump purge rate = 3 minutes

Depth to Bottom: 28.49 feet (TOC) Time: _____ (measure after sample has been collected)

Field parameters will also be recorded by the low flow sampling system.

Time (24 HR)	DTW (ft)	Pump Dial[1]	Purge Rate (ml/min)	Cum. Volume Removed (ml.)	pH	Spec. Cond.[2] µS/cm	Temp. °C	Turbidity NTU	DO[3] Mg/L	ORP[4] mv

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-307712-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/3/2025 10:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.7°C.

GC/MS VOA
Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid. Vial preservation was pH <2 rather than pH 4-5. : MW-19R (310-307712-1) and MW-1 (310-307712-2). The requested target analyte list includes Acrylonitrile.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020B: The laboratory control sample (LCS) for preparation batch 310-456702 and analytical batch 310-457663 recovered outside control limits for the following analytes: silver. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Field Service / Mobile Lab
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Summary

Client: AECOM
Job ID: 310-307712-1
Project/Site: Winneshiek Groundwater Monitoring

Method: 8260D - Volatile Organic Compounds by GC/MS

Matrix: Ground Water — **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)		
		DBFM	TOL	BFB
Lab Sample ID	Client Sample ID	(76-130)	(80-120)	(80-120)
310-307712-1	MW-19R	112	94	105
310-307712-1	MW-19R	113	92	102
310-307712-2	MW-1	112	96	99

Accreditation/Certification Summary

Client: AECOM
Job ID: 310-307712-1
Project/Site: Winneshiek Groundwater Monitoring

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Field Sampling		Ground Water	Field Turbidity
Field Sampling		Water	Field Turbidity

Method Summary

Client: AECOM
Job ID: 310-307712-1
Project/Site: Winneshiek Groundwater Monitoring

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CF
6020B	Metals (ICP/MS)	SW846	EET CF
I-3765-85	Residue, Non-filterable (TSS)	USGS	EET CF
Field Sampling	Field Sampling	EPA	EET CF
3005A	Preparation, Total Metals	SW846	EET CF
5030B	Purge and Trap	SW846	EET CF

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: AECOM

City/State: CITY | STATE | Project:

Receipt Information

Date/Time Received: DATE 6·3·25 | TIME 1020 | Received By: CGC

Delivery Type: ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☐ Lab Courier ☐ Lab Field Services ☑ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID:

Multiple Coolers? ☐ Yes ☑ No *If yes:* Cooler # _____ of _____

Cooler Custody Seals Present? ☐ Yes ☑ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☑ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

All

Temperature Record

Coolant: ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: AA | Correction Factor (°C): 0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C) 1.7 | Corrected Temp (°C): 1.7

• **Sample Container Temperature**

Container(s) used:	CONTAINER 1	CONTAINER 2
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE. If yes, contact PM before proceeding. If no, proceed with login

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other ____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ Return to Client ☐ Disposal by Lab ☐ Archive for ____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No	Cooler Temp (°C) Obs'd ____ Corr'd ____	Therm ID No ____

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-307931-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/5/2025 7:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.1°C.

GC/MS VOA
Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid. Vial preservation was pH <2 rather than pH 4-5. : SW-1 (310-307931-1), SW-5 (310-307931-2), SW-5-FD (310-307931-3), SW-2 (310-307931-4), MW-41A (310-307931-5), MW-35 (310-307931-6), MW-38A (310-307931-7), MW-39A (310-307931-8), MW-40A (310-307931-9), Trip Blank (310-307931-10), MW-34A (310-307931-11) and MW-34A-FD (310-307931-12). The requested target analyte list includes Acrylonitrile.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020B: The laboratory control sample (LCS) for preparation batch 310-456874 and analytical batch 310-458075 recovered outside control limits for the following analytes: silver. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Field Service / Mobile Lab
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Accreditation/Certification Summary

Client: AECOM
Job ID: 310-307931-1
Project/Site: Winneshiek Groundwater Monitoring

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Field Sampling		Ground Water	Field Turbidity
I-3765-85		Ground Water	Total Suspended Solids
I-3765-85		Water	Total Suspended Solids

Method Summary

Client: AECOM
Job ID: 310-307931-1
Project/Site: Winneshiek Groundwater Monitoring

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CF
6020B	Metals (ICP/MS)	SW846	EET CF
I-3765-85	Residue, Non-filterable (TSS)	USGS	EET CF
Field Sampling	Field Sampling	EPA	EET CF
3005A	Preparation, Total Metals	SW846	EET CF
5030B	Purge and Trap	SW846	EET CF

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: AECOM

City/State: CITY Waterloo STATE IA Project:

Receipt Information

Date/Time Received: DATE 6.5.25 TIME 750 Received By: [signature]

Delivery Type. ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☐ Lab Courier ☐ Lab Field Services ☑ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler?	☑ Yes ☐ No	*If yes:* Cooler ID:
Multiple Coolers?	☐ Yes ☑ No	*If yes:* Cooler # _____ of _____
Cooler Custody Seals Present?	☐ Yes ☑ No	*If yes* Cooler custody seals intact? ☐ Yes ☐ No
Sample Custody Seals Present?	☐ Yes ☑ No	*If yes* Sample custody seals intact? ☐ Yes ☐ No
Trip Blank Present?	☐ Yes ☑ No	*If yes:* Which VOA samples are in cooler? ↓

Temperature Record

Coolant. ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other:_____ ☐ NONE

Thermometer ID: AA Correction Factor (°C): 0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C) 1.1 Corrected Temp (°C) 1.1

• **Sample Container Temperature**

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C).		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE If yes, contact PM before proceeding If no, proceed with login

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Nick Schrock
AECOM
501 Sycamore Street
Suite #222
Waterloo, Iowa 50703

Generated 6/19/2025 10:49:07 PM

JOB DESCRIPTION

Winneshiek Groundwater Monitoring
2025 Spring Groundwater

JOB NUMBER

310-308053-1

Eurofins Cedar Falls
3019 Venture Way
Cedar Falls IA 50613

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-308053-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/6/2025 8:20 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were -1.1°C and 0.5°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 310-457250. The laboratory control sample (LCS) was performed in duplicate (LCSD) to provide precision data for this batch.

Method 8270E: The continuing calibration verification (CCV) associated with batch 310-457998 recovered above the upper control limit for 4-Nitrophenol (22.7 %D). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is:(CCV 310-457998/2).

Method 8270E: The laboratory control sample (LCS) for preparation batch 310-457250 and analytical batch 310-457998 recovered outside acceptance limits for 3,3'-Dimethylbenzidine, Famphur and 1,4-phenylenediamine. There was insufficient sample to perform a re-extraction or re-analysis; therefore, the data have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 310-457250 and analytical batch 310-457998 recovered outside control limits for the following analytes: 3,3'-Dimethylbenzidine, Methapyrilene and 1-Naphthylamine.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Herbicides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Field Service / Mobile Lab

Job ID: 310-308053-1 (Continued) Eurofins Cedar Falls

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Summary

Accreditation/Certification Summary

Client: AECOM
Job ID: 310-308053-1
Project/Site: Winneshiek Groundwater Monitoring

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260D		Ground Water	1,2,4-Trichlorobenzene
8260D		Ground Water	Allyl chloride
8260D		Ground Water	Ethyl methacrylate
8260D		Ground Water	m,p-Xylene
8260D		Ground Water	o-Xylene
Field Sampling		Ground Water	Field Turbidity

Laboratory: Eurofins Cleveland

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: AECOM

City/State: CITY Waterloo STATE IA Project:

Receipt Information

Date/Time Received. DATE 6-6-25 TIME 820 Received By: PH

Delivery Type. ☑ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☐ Lab Courier ☐ Lab Field Services ☐ Client Drop-off ☐ Other:_____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☑ Yes ☐ No *If yes:* Cooler ID.

~~Multiple Coolers?~~ ☑ Yes ☐ No *If yes:* Cooler # 1 of 2

Cooler Custody Seals Present? ☐ Yes ☑ No *If yes:* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☑ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☑ Yes ☐ No *If yes:* Which VOA samples are in cooler? ↓

MW-31A, H2A, Eq blank #1 shallow, MW-25A

Temperature Record

Coolant. ☑ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other._____ ☐ NONE

Thermometer ID: AA Correction Factor (°C): 0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C): -1.1 Corrected Temp (°C): -1.1

• **Sample Container Temperature**

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C):		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☑ No

NOTE. If yes, contact PM before proceeding If no, proceed with login

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Client Information (Sub Contract Lab)	Sampler: N/A	Lab PM: Bindert, Zach T	Carrier Tracking No(s): N/A	COC No: 310-83721.1
Client Contact: Shipping/Receiving	Phone: N/A	E-Mail: Zach.Bindert@et.eurofinsus.com	State of Origin: Iowa	Page: Page 1 of 1
Company: Eurofins Lancaster Laboratories Environm		Accreditations Required (See note): State Program - Iowa		Job #: 310-308053-1
Address: 2425 New Holland Pike, ,	Due Date Requested: 6/19/2025			Preservation Codes: -
City: Lancaster	TAT Requested (days): N/A			
State, Zip: PA, 17601				
Phone: 717-656-2300(Tel)	PO #: N/A			
Email: N/A	WO #: N/A			
Project Name: Winneshiek County Landfill - Groundwater	Project #: 31017151			
Site: 310 - AECOM - Winneshiek County	SSOW#: N/A			Other: N/A

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=Comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	8151A/8151A_AP Default List	Total Number of containers	Special Instructions/Note:
			Preservation Code:						
MW-42A (310-308053-3)	6/5/25	11:00 Central	G	Water			X	2	
MW-43A (310-308053-4)	6/5/25	12:30 Central	G	Water			X	2	
MW-44A (310-308053-5)	6/5/25	13:30 Central	G	Water			X	2	

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Possible Hazard Identification	*Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*
Unconfirmed	☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* _____ *Months*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	False	No ambers for sample 1 for endosulfan I
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-308221-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/7/2025 7:50 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.3°C.

GC/MS VOA
Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample(s) was received preserved with hydrochloric acid. Vial preservation was pH <2 rather than pH 4-5. : MW-101 (310-308221-1) and MW-29A (310-308221-2). The requested target analyte list includes Acrylonitrile.

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid. Vial preservation was pH <2 rather than pH 4-5. : MW-22 (310-308221-3), MW-7A (310-308221-4), MW-46A (310-308221-5), MW-45A (310-308221-6) and MW-45A-FD (310-308221-7). The requested target analyte list includes Acrylonitrile.

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-457140 recovered outside of the control limits for trans-1,3-Dichloropropene (-20.7%D). The LCS associated with this CCV passed CCV criteria for the affected analyte; therefore, the data have been reported. The associated sample is:(CCV 310-457140/3).

Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample was received preserved with hydrochloric acid. Vial preservation was pH <2 rather than pH 4-5. : Equipment Blank #2 Deep (310-308221-8) and Trip Blank (310-308221-9). The requested target analyte list includes Acrylonitrile.

Method 8260D: The method requirement for no headspace was not met. The following volatile sample was analyzed with headspace in the sample container: Trip Blank (310-308221-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020B: The continuing calibration verification (CCV) associated with batch 310-458381 recovered above the upper control limit for Silver, Cadmium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 6020B: The continuing calibration verification (CCV) associated with batch 310-458381 recovered above the upper control limit for Silver. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Field Service / Mobile Lab
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Summary

Accreditation/Certification Summary

Client: AECOM
Job ID: 310-308221-1
Project/Site: Winneshiek Groundwater Monitoring

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Field Sampling		Ground Water	Field Turbidity

Laboratory: Eurofins Cleveland

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Analysis Requested

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing North Central, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing North Central, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing North Central, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing North Central, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Narrative
310-308310-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/10/2025 8:15 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.5°C.

GC/MS VOA
Method 8260D: The preservative used in the sample containers provided is not compatible with one of the Method 8260 analytes requested. The following sample(s) was received preserved with hydrochloric acid. Vial preservation was pH <2 rather than pH 4-5. : MW-4B (310-308310-2), MW-4 (310-308310-3), Trip Blank (310-308310-4), GU-1 (310-308310-5) and GU-2 (310-308310-6). The requested target analyte list includes Acrylonitrile.

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-457385 recovered outside of the control limits for trans-1,3-Dichloropropene (-20.3%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 310-457385/3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Field Service / Mobile Lab
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Project/Site: Winneshiek Groundwater Monitoring

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Surrogate Summary

Accreditation/Certification Summary

Client: AECOM
Job ID: 310-308310-1
Project/Site: Winneshiek Groundwater Monitoring

Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Iowa	State	007	12-01-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Field Sampling		Ground Water	Field Turbidity
I-3765-85		Ground Water	Total Suspended Solids

Method Summary

Client: AECOM
Job ID: 310-308310-1
Project/Site: Winneshiek Groundwater Monitoring

Method	Method Description	Protocol	Laboratory
8260D	Volatile Organic Compounds by GC/MS	SW846	EET CF
6020B	Metals (ICP/MS)	SW846	EET CF
I-3765-85	Residue, Non-filterable (TSS)	USGS	EET CF

Cooler/Sample Receipt and Temperature Log Form

Client Information

Client: AECOM

City/State: CITY Waterloo STATE IA Project:

Receipt Information

Date/Time Received: DATE 6/10/25 TIME 0815 Received By R

Delivery Type. ☐ UPS ☐ FedEx ☐ FedEx Ground ☐ US Mail ☐ Spee-Dee
☐ Lab Courier ☐ Lab Field Services ☒ Client Drop-off ☐ Other._____

Condition of Cooler/Containers

Sample(s) received in Cooler? ☒ Yes ☐ No *If yes:* Cooler ID.

Multiple Coolers? ☐ Yes ☒ No *If yes:* Cooler # _____ of _____

Cooler Custody Seals Present? ☐ Yes ☒ No *If yes.* Cooler custody seals intact? ☐ Yes ☐ No

Sample Custody Seals Present? ☐ Yes ☒ No *If yes:* Sample custody seals intact? ☐ Yes ☐ No

Trip Blank Present? ☐ Yes ☐ No *If yes.* Which VOA samples are in cooler? ↓

Temperature Record

Coolant. ☒ Wet ice ☐ Blue ice ☐ Dry ice ☐ Other._____ ☐ NONE

Thermometer ID: R Correction Factor (°C): +0.0

• **Temp Blank Temperature** – If no temp blank, or temp blank temperature above criteria, proceed to Sample Container Temperature

Uncorrected Temp (°C). 1.5 Corrected Temp (°C) 1.5

• **Sample Container Temperature**

	CONTAINER 1	CONTAINER 2
Container(s) used:		
Uncorrected Temp (°C):		
Corrected Temp (°C)		

Exceptions Noted

1) If temperature exceeds criteria, was sample(s) received same day of sampling? ☐ Yes ☐ No
   a) *If yes:* Is there evidence that the chilling process began? ☐ Yes ☐ No

2) If temperature is <0°C, are there obvious signs that the integrity of sample containers is compromised? (e g , bulging septa, broken/cracked bottles, frozen solid?) ☐ Yes ☐ No

NOTE If yes, contact PM before proceeding If no, proceed with login

Additional Comments

Vials are for 46A not 4B

Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

October 2025 Sampling Event

Groundwater Sampling Field Sheet

	Winneshiek County		
Site Name:	Sanitary Landfill	Permit No.:	96-SDP-1-74P
Well/Piezometer:	GU-1	Weather:	Cloudy, 47°F, NW winds 15-25 mph, 30.0"Hg
Date:	10/21/2025	Personnel:	O.A. Technical Services: Tyler Merritt and Curtis Schwartz

Location Details

Description of Sample Location: GU-1 is the compliance point for the Cell 5 groundwater underdrain.

Conditions commentary:

Sampling Details

Sampling Method: ____ Pump (low flow) ____ No-purge (specify sample interval): ____
____ Bailer ____ Other (specify): ____

Equipment type: ____ Submersible pump ____ Peristaltic pump ____ Bladder pump
____ Inertial lift pump ____ Bailer ____ No-purge (specify): ____
____ Other (specify): ____

Equipment name/description: Not Applicable Dedicated? (Y/N): N/A Disposable? (Y/N): N/A
Decontamination method: Not Applicable

Equipment depth (ft. MSL:) N/A | Flow Rate (mL/min): N/A | Volume removed (gal): N/A | Volume sampled (L): N/A
Well dry? (Y/N): Yes | Odor? (Y/N): N/A | Color? (Y/N): N/A

Sample Name(s)	Method(s)	Container(s)	Filtered? (if yes, filter size)
*No sample collected			

Field Analysis

	Final Reading
Time	N/A
Temp (°C)	N/A
Sp. Cond (umhos/cm)	N/A
pH	N/A
DO (mg/l)	N/A
ORP (mV)	N/A
Turbidity (NTU)	N/A

Comments: * No flow was observed at GU-1; therefore, no sample was collected.

Groundwater Sampling Field Sheet

	Winneshiek County		
Site Name:	Sanitary Landfill	Permit No.:	96-SDP-1-74P
Well/Piezometer:	GU-2	Weather:	Cloudy, 47°F, NW winds 15-25 mph, 30.0"Hg
Date:	10/21/2025	Personnel:	O.A. Technical Services: Tyler Merritt and Curtis Schwartz

Location Details

Description of Sample Location: GU-2 is the compliance point for the Cell 5 Expansion groundwater underdrain.

Conditions commentary:

Sampling Details

Sampling Method: ____ Pump (low flow) ____ No-purge (specify sample interval): ____
____ Bailer ____ Other (specify): ____

Equipment type: ____ Submersible pump ____ Peristaltic pump ____ Bladder pump

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job Narrative
310-318534-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The samples were received on 10/21/2025 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.0°C, 0.4°C, 0.6°C and 1.0°C.

GC/MS VOA
Method 8260D: Surrogate recovery for the following samples were outside the upper control limit: MW_1_25_10 (310-318534-1) and MW-31A_25_10 (310-318534-6). This sample did not contain any target analytes; therefore, re-analysis was not performed.

Method 8260D: The continuing calibration verification (CCV) associated with batch 310-471134 recovered outside of the control limits for Vinyl chloride (-33%D), Dichlorodifluoromethane (-24%D), and Chloromethane (-30%D). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 310-471134/4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 310-471377 was outside the method criteria for the following analyte(s): Famphur. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 310-470953 and analytical batch 310-471377 recovered outside control limits for the following analytes: 3,3'-Dimethylbenzidine and Methapyrilene.

Method 8270E: The surrogate recovery for the blank associated with preparation batch 310-470953 and analytical batch 310-471377 was outside the upper control limits.

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 310-470953 and analytical batch 310-471537 recovered outside control limits for the following analyte(s): 1,4-phenylenediamine. 1,4-phenylenediamine have been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Herbicides
Method 8151A: Surrogate recovery for the following sample was outside the upper control limit: EB-1_25_10 (310-318534-14). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Job ID: 310-318534-1 (Continued) Eurofins Cedar Falls

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 6020B: The initial calibration verification (ICV) result for batch 310-471990 was above the upper control limit. The affected analytes are: antimony. Sample results were non-detects, and have been reported as qualified data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method SM5210B_Calc: The USB dilution water D.O. depletion was greater than 0.2 mg/L. The associated sample results in batch 310-470893 are qualified and reported. The USB depletion was 0.91 mg/L.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*1	LCS/LCSD RPD exceeds control limits.
E	Result exceeded calibration range.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1+	Surrogate recovery exceeds control limits, high biased.

GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
^1+	Initial Calibration Verification (ICV) is outside acceptance limits, high biased.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
b	Result Detected in the Unseeded Control blank (USB).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Toluene-d8 (Surr)	99		80 - 120

Method: 8270E - Semivolatile Organic Compounds (GC/MS)

Lab Sample ID: MB 310-470953/1-A
Matrix: Water
Analysis Batch: 471377

Client Sample ID: Method Blank
Prep Type: Total/NA
Prep Batch: 470953

Benzo[g,h,i]perylene	100	81.07		ug/L		81	42 - 135
Benzo[k]fluoranthene	100	104.5		ug/L		104	49 - 134
Benzyl alcohol	100	94.38		ug/L		94	46 - 123
Bis(2-chloroethoxy)methane	100	103.1		ug/L		103	44 - 126
Bis(2-chloroethyl)ether	100	88.31		ug/L		88	41 - 116
bis (2-chloroisopropyl) ether	100	87.40		ug/L		87	36 - 115
Bis(2-ethylhexyl) phthalate	100	85.36		ug/L		85	46 - 138
4-Bromophenyl phenyl ether	100	98.74		ug/L		99	41 - 131
Butyl benzyl phthalate	100	99.77		ug/L		100	47 - 133
4-Chloroaniline	100	93.06		ug/L		93	13 - 143
Chlorobenzilate	51.2	54.20		ug/L		106	39 - 145
4-Chloro-3-methylphenol	100	108.8		ug/L		109	51 - 132
2-Chloronaphthalene	100	83.72		ug/L		84	33 - 112
2-Chlorophenol	100	87.93		ug/L		88	43 - 119
4-Chlorophenyl phenyl ether	100	97.25		ug/L		97	44 - 118
Chrysene	100	103.3		ug/L		103	50 - 128
Diallate	44.8	46.74		ug/L		104	40 - 135
Dibenzo(a,h)anthracene	100	71.51		ug/L		72	36 - 146
Dibenzofuran	100	93.26		ug/L		93	44 - 114
2,4-Dichlorophenol	100	98.97		ug/L		99	44 - 131
2,6-Dichlorophenol	100	99.27		ug/L		99	41 - 131
Diethyl phthalate	100	104.9		ug/L		105	43 - 135
Dimethoate	44.8	47.03		ug/L		105	31 - 150
7,12-Dimethylbenz(a)anthracene	51.2	46.70		ug/L		91	47 - 129
3,3'-Dimethylbenzidine	51.2	9.367	J	ug/L		18	10 - 147
2,4-Dimethylphenol	100	111.6		ug/L		112	30 - 128
Dimethyl phthalate	100	104.9		ug/L		105	46 - 129
Di-n-butyl phthalate	100	98.24		ug/L		98	49 - 138
1,3-Dinitrobenzene	100	88.78		ug/L		89	36 - 147
4,6-Dinitro-2-methylphenol	200	146.0		ug/L		73	22 - 150
2,4-Dinitrophenol	200	119.1		ug/L		60	10 - 150
2,4-Dinitrotoluene	100	101.6		ug/L		102	48 - 136
2,6-Dinitrotoluene	100	95.57		ug/L		96	49 - 135
Dinoseb	51.2	34.15		ug/L		67	22 - 150
Diphenylamine	85.0	89.71		ug/L		106	43 - 132
Disulfoton	44.8	40.55		ug/L		91	27 - 138
Ethyl methanesulfonate	51.2	41.36		ug/L		81	44 - 110
Ethyl Parathion	44.8	37.71		ug/L		84	52 - 141
Famphur	44.8	45.80	E	ug/L		102	67 - 150
Fluoranthene	100	96.39		ug/L		96	49 - 132
Fluorene	100	97.54		ug/L		98	46 - 118
Hexachlorobenzene	100	103.2		ug/L		103	42 - 134
Hexachlorobutadiene	100	78.05		ug/L		78	29 - 110
Hexachlorocyclopentadiene	100	61.08		ug/L		61	10 - 110
Hexachloroethane	100	64.78		ug/L		65	25 - 110
Hexachloropropene	51.2	16.65		ug/L		33	10 - 110
Indeno[1,2,3-cd]pyrene	100	65.96		ug/L		66	36 - 149
Isodrin	51.2	47.82		ug/L		93	50 - 122
Isophorone	100	100.9		ug/L		101	46 - 126

Method: 8270E - Semivolatile Organic Compounds (GC/MS) (Continued)
